TENDERS FOR LIVERPOOL CORPORATION BILLS.

1. The Corporation of Liverpool hereby give notice that Tenders will be received at the Chief Cashier's Office, at the Bank of England, London, on Tuesday, the 5th October at one o'clock, for Liverpool Corporation Bills to be issued under the Liverpool Corporation Acts, 1900, 1905, 1913, and the Local Government Board's Provisional Orders Confirmation (No. 5) Act, 1915, to the amount of £1,500,000, one million five hundred thousand pounds), of which £1,000,000 will be in replacement of bills falling due on the 10th idem.

2. The bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated the 9th day of October, 1915, and will be payable at six months after date, viz., the 9th day of April, 1916.

3. The Tenders must specify the net amount per cent. which will be given for the amounts applied for; and the Tenders of private individuals must be made through a London banker.

4. The bills will be issued and paid at the Bank of England, London.

5. The persons whose Tenders are accepted will be informed of the same on Wednesday, the 6th October, and payment in full of the amounts of the accepted Tenders must be made to the Bank of England in London not later than twelve o'clock on Saturday, the 9th October.

6. The Corporation of Liverpool reserve the right of rejecting any Tenders.

7. Tenders should be on the printed form, which can be obtained at the Town Clerk's Office, Municipal Offices, Liverpool; and at the Chief Cashier's Office, Bank of England, London; or at any of the branches of that Bank.

8. The Treasury has been consulted under the Notification of the 18th January, 1915, and raises no objection to this issue. It must be distinctly understood that in considering whether they have, or have not, any objections to new issues, the Treasury does not take any responsibility for the financial soundness of any schemes, or for the correctness of any of the statements made, or opinions expressed, with regard to them.

EDWARD R. PICKMERE, Town Clerk.
Municipal Offices,
Dale Street, Liverpool.
28th September, 1915.

THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY.

FOUR-PER-CENT. ONE HUNDRED-YEAR ADJUSTMENT MORTGAGE BONDS.

NOTICE IS HEREBY GIVEN that the Board of Directors of this Company has declared to be due and payable on the first day of November, 1915 an annual instalment of interest (being the nineteenth instalment) upon the Unstamped Adjustment Mortgage Bonds at the rate of Four per Cent. (4%) on the par amount thereof, being Forty dollars ($40) upon each One thousand dollar ($1,000) bond, and Twenty dollars ($20) upon each Five hundred dollar ($500) bond. Such interest will be paid at the Office of the Company, No. 5 Nassau Street, New York City, on the Coupon Bonds upon presentation and surrender of the respective coupons numbered 19 and on the Registered Bonds to the registered holders thereof. The Transfer Books of the Registered Bonds will Close on October 2, 1915, and will remain Closed until November 3, 1915.

STAMPED ADJUSTMENT MORTGAGE BONDS.

SEMI-ANNUAL INTEREST.

A semi-annual instalment of Two per Cent. (2%) in respect of interest on the Stamped Adjustment Mortgage Bonds, being Twenty dollars ($20) upon each One thousand dollar ($1,000) bond, and Ten dollars ($10) upon each Five hundred dollar ($500) bond, will be paid at the Office of the Company, No. 5 Nassau Street, New York City, on November 1, 1915 on the Coupon Bonds upon presentation and surrender of the respective coupons numbered 38 and on the Registered Bonds to the registered holders thereof. The Transfer Books of the Registered Bonds will Close on October 2, 1915, and will remain Closed until November 3, 1915.

C. K. COOPER,
Assistant Treasurer.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED.

(Incorporated in the Transvaal.)

NOTICE TO SHAREHOLDERS.

NOTICE IS HEREBY GIVEN that the Eighteenth Ordinary General Meeting of shareholders for the year ended 30th June, 1915, will be held in the Board Room, The Corner House, Johannesburg, on Wednesday, 24th November, 1915, at 11 A.M., for the following business:—

1. To receive and consider the Balance Sheet and Accounts for the year ended 30th June, 1915, and the Reports of the Directors and Auditors.

2. To elect Directors in the place of those retiring in accordance with the provisions of the Company's Articles of Association.

3. To determine the remuneration of the Auditors for the past audit, and to appoint Auditors for the ensuing year.

4. To transact any other business which may be transacted at an Ordinary General Meeting or which is brought under consideration by the Report of the Directors.

The Share Transfer books of the Company will be closed from the 24th November, 1915, to the 30th November, 1915, both days inclusive.

Holders of Share Warrants who desire to be present or represented at the Meeting shall produce their Share Warrants (or may at their option deposit same) at the places and within the times following:—

(a) At the Head Office of the Company in Johannesburg, at least twenty-four hours before the time appointed for the holding of the Meeting.

(b) At the London Office of the Company, No. 1 London Wall Buildings, London, E.C., at least thirty days before the date appointed for the holding of the Meeting.

(c) At the Office of the Crédit Mobilier Français, 70 and 72 Rue Tronchet, Paris, at least thirty days before the date appointed for the holding of the Meeting.

and shall otherwise comply with the "Conditions as to the issue of Share Warrants" now in force.

Upon such production or deposit a certificate, with proxy form, will be issued, under which such Share Warrant holders may attend the Meeting either in person or by proxy.

By Order of the Board,
RAND MINES, LIMITED, Secretaries.
S. C. STEIL, Joint Secretary.

Head Office:
The Corner House,
Johannesburg, Transvaal,

MONEY.

ARE HIGHER RATES ESSENTIAL?

On the whole the Money market has been quite firm this week, and if anything rates are a shade higher than they were a week ago. This is partly due, of course, to the fact that three months' bills taken this week mature either just before or just after the turn of the year. Another factor has been the relatively short supplies of floating money in consequence of the payment of the last call on the War Loan and the purchase at the Bank at the end of September of an additional £16,000,000 of "Treasuries." The effect of these various influences on market balances was shown by the Bank of England return, which disclosed that the "other" deposits in the week ended Wednesday have been reduced only £13,000,000, and that the total amounted to only £76,689,000, in comparison with £157,983,000 early in July.

In the current week bankers' balances will be largely restored by Government payments, which will include the interest on the debt, and the temporary short supply of floating money which caused a few people to go to the Bank of England at the end of September will disappear. It is, however, essential that the market should not permit rates for money and for discount to fall away. It is true that the new loan of £100,000,000 in America will give to London about £48,000,000 of exchange, and that the money thus provided will materially reduce the amount of gold shipments. Nevertheless, it must be borne in mind that the country's purchases of goods from foreign and Colonial countries are enormous, and that unless something is done to increase our productive and exporting power these purchases must lead to the export of large amounts of gold.

It may be possible, however, somewhat to curtail the amount of gold that may be shipped by offering such rates of interest in London that foreign bankers will find it more advantageous to leave their money here for employment in the London Money market than to take it away to their various countries. If this is to be effected it is evident that the rate of interest here must be a profitable one.

Already there are signs of trade expansion the world over, and of the money which returned to England during the trade contraction in foreign countries again flowing out. If the rate of interest in London is not a tempting one the large unfavourable trade balance to which we are now exposed cannot fail to cause the export of a greater amount of gold than London can afford to spare. Further, the market will realise that practically nothing has yet been done either to induce or to compel the British people to become more economical or to provide a larger part of the expenditure upon the war by domestic economy.

The Chancellor of the Exchequer has announced this week that the sale of 5*s.* vouchers up to the end of August amounted approximately to £244,000. If we assume that the whole of these vouchers were sold in August, the amount received from the savings of the working classes is at the rate of less than £3,000,000 a year, a sum that is scarcely worth talking about, having regard to the money needed not merely to cover the great Budget deficiency, but to provide for the country's adverse trade balance. Of course, if one could be sure that the War will be brought to an end within the next few months, one would not need to trouble about the position; but if the War is continued beyond a few months, it is evident that trade throughout the world will greatly expand in volume, that the demand for money in all countries will largely increase, and that the demand upon London for gold may be greater than London can meet, unless it becomes possible to borrow very largely from foreign countries. Thus, having regard to the steady increase in pressure upon London for money, and to the entire situation, it is of the highest importance that bankers should do everything in their power to retain here all the foreign money that can be retained by a profitable rate of interest.

We would specially call attention to the fact that in the last three weeks the reserve of the Bank of England has been reduced from £54,000,000 to under £48,000,000 and that it is usual for cash to be withdrawn from London on home account in the later months of the year. With this situation we have to face the fact that the country is buying enormous amounts of goods over and above what it can pay for by exports and by services, or even by the sale of securities, and that it is possible, indeed probable, that notwithstanding the substantial loan from America we may witness a reduction in the Bank's reserve in consequence of the outflow of cash to the country being attended by a substantial outflow of gold on foreign account. Furthermore, it is evident that the loss of reserve in recent weeks would have been still greater but for the expansion in the circulation of Treasury notes. Since the end of July the increase in the Currency notes outstanding has been no less than £27,000,000. Of this sum about £11,000,000 has been used for the purchase of Government securities, while £19,000,000 has been deposited with the Bank of England. And the recent reduction in the Bank of England's reserve has been in spite of this great increase in the Currency note circulation, which must have brought into the Bank a very large sum of gold. How much gold remains in circulation is unknown. The amount is probably large. But it is evident that after the issue of £72,000,000 of Currency notes the amount has been greatly reduced, and it is clear that the quantity of gold in the country is now not nearly as great as it was early in the year. Having regard to all these considerations we think that an open market rate of discount of at least 5% is called for, and that the time is approaching when it may be necessary for the Bank of England to advance its rate above 5%, and to cause the open market rate to be correspondingly raised.

Several lines of bills placed here on foreign and Colonial account, and falling due shortly, are expected to be paid off at maturity. These consist of £600,000 of Norwegian Government Treasury bills due next week, a similar amount of Province of Ontario bills due November 3 out of funds raised recently in New York, and £3,000,000 of Japanese Government Treasury bills. The Japanese bills fall due as to £1,875,000 on February 16 next, and £1,125,000 on March 13, the money with which to pay them off being provided by means of an internal loan. All this is to the good.

LIVERPOOL CORPORATION BILLS.

Tenders will be received at the Bank of England, London, on Tuesday next, October 5, for Liverpool Corporation bills to the amount of £1,500,000, of which £1,000,000 will be in replacement of bills

falling due on the 10th inst. The bills will be dated October 9, 1915, and will have a currency of six months.

BANK OF ENGLAND.

THE Bank of England reserve this week was reduced £2,068,000, notwithstanding an increase of £1,700,000 in the currency notes in circulation. This reduction brought the reserve down to £47,659,000, a figure which compares with £54,558,000 at the beginning of the month. The loss of gold was £891,000, and the total has been reduced to £62,009,000. Beyond the gold held by the Bank of England the amount held against the currency notes is £28,500,000, so that the total stock of gold in the Bank against the notes in circulation of both descriptions is £90,509,000. Until recently this stock of gold was more than sufficient to cover the whole of the notes in circulation, but now the currency notes in circulation amount to £72,000,000, while the Bank of England notes in circulation are £32,800,000. Hence the total notes in circulation are £104,000,000, or about £14,000,000, in excess of the gold held. Of course, it is quite unnecessary to hold anything like £90,000,000 of gold against this note circulation. At the present time the gold held by the Bank of Germany is only £120,000,000, while its notes in circulation are £277,000,000, and while the Bank of France holds £180,000,000 in gold, its note circulation amounts to 532,000,000. With so small an excess of Bank of England and currency notes over the gold held against them, it will be evident the position of this country is wonderfully strong in comparison with the position in Continental countries. Still, it is necessary at the present moment with so great an adverse trade balance to note that we are losing gold, and that our note circulation is increasing. The increase in public deposits for the week was only £7,478,000, in spite of the payment of the recent instalment on the War Loan, and the issue of an additional £16,000,000 of Treasury bills. The "other" deposits have been reduced £12,956,000, and now stand at only £76,689,000, a smaller figure than at any time since the beginning of August last year. The "other" securities were reduced £3,363,000 to £132,314,000. The proportion of reserve to liabilities is only slightly lower for the week at 24.75 per cent., the loss in reserve having been largely neutralised by a reduction in liabilities.

MONEY IN INDIA.

EXCHANGE from India is again firmer, and now comes from Calcutta at 1*s.* 4 3/32*d.* There was a good demand for the 50 lacs of Council drafts, and tenders for bills at 1*s.* 4*d.* received only 10%, while 12 lacs of transfers were placed at 1*s.* 4 1/16*d.* Money continues to flow out into circulation, and according to the latest currency return the efflux of silver for the week was as much as 102 lacs, making a total of nearly 300 lacs in the first three weeks of September.

The following are the minimum Rates of Discount current in India:—

Bombay ... 5 per cent. (June 2, '15) | Bengal ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, September 29, are:—

	Bills.				Telegraphic Transfers.

Transfers on Calcutta (Deferred)	10,000	1/4 3/32
Transfers on Calcutta (Deferred)	10,00,000	1/4

From April 1 to September 28 inclusive the Council granted remittances for **rs. 4,73,73,935, realising £3,156,448. Up to September 29** of last financial year the total Bills and Transfers sold was **Rs. 5,59 44,861, realising £3,733,127.** The total sales for the week ended **September 28** amounted to **Rs. 66,14,971,** realising **£441,515.** The amount to be offered for tender next Wednesday will again be **50** lacs.

SILVER.

The Silver market has remained steady, and after falling to 23 5/8*d.* the price has recovered to 23 7/8*d.* per ounce. With business in the East showing distinct signs of recovery the Eastern demand for silver may soon show appreciable recovery. At the present time there is an unusually heavy demand for silver coin in the belligerent countries. Indeed, at the moment it is somewhat difficult to obtain silver coins from the London banks, and it is evident that if the unusually large demand for silver for coinage is supplemented by a greater demand from the East a marked recovery in the price of the metal may be witnessed. As far as we are able to gauge the situation we anticipate a distinct advance in silver in the next few weeks.

	Sept. 24	25	27	28	29	30	Oct. 1

Exchange	1/4	1/4	1/4	1/4	1/4	1/4	1/4

Stock Exchange.

THE War incidents have not had any appreciable effect in bringing about market movements on the Stock Exchange, but, to use an euphemism, the spirits of members have been "bucked up." Gratification is felt at the strength displayed on the New York Stock Exchange and the response of America to the Anglo-French Loan proposals. Though price fluctuations here have not been of any appreciable extent during the week, in general the trend is what in olden times would have been called a steady one. There has been a good deal of discussion about the influence on different classes of securities of the taxes on excess profits. All the varied calculations which have been put forward in different quarters are to be received with reserve, for there are many conditions in regard to which the outsider cannot have knowledge. A mere rough-and-ready calculation of 50% of excess profits is no true criterion in respect of individual companies. In the case of ammunition, &c., works there come into consideration the erection of new buildings and plant of a temporary nature, interference with good-will through the transference of business for a longer period than initially thought of, and other allowances and reliefs to be adjusted by special tribunals.

Apropos of the steps we last week referred to for clearing up the position on the Paris Bourse, private advices from that centre report a strong belief in well-informed quarters that the progress achieved will be great, it being expected indeed that the matter will

The only means of securing relief from **Income Tax and Super Tax** and of providing for **Death Duties** explained in a special brochu

be adjusted with much more smoothness than at one time was thought probable.

ARGENTINE RAILWAY RESULTS.

BUENOS AYRES GREAT SOUTHERN.

SPECULATION as to the results secured by the leading Argentine Railway Companies in the past twelve months is set at rest by the dividend announcements made this week. Three Companies have declared their final distributions for the year, and, as far as the market is concerned, they come up to expectation. In each case, however, the dividends to be paid have not been earned, and the policy of the directors appears to have been more a question of expediency than as reflecting the real earning power of the Companies. The Buenos Ayres Western and the Central Argentine have been distinctly more fortunate than the Great Southern, whose annual distribution is reduced from 5% to 4%, whereas the two former undertakings are maintaining their rates at 5% per annum. In making its interim distribution at the rate of 4% per annum in April last, it will be recollected the directors of the Buenos Ayres Great Southern Railway announced that the reserve fund had been drawn upon, but to what extent was not disclosed, and although nothing further is taken from reserve at the close of the year, the final distribution, also at the rate of 4% per annum, is rendered possible only by reducing the balance carried forward from £316,000 to £58,000. In the absence of data as to reserve appropriations six months ago, the profit of the Company for the past year appears to have been about £734,000, as against £989,000, a decline of £255,000, or nearly 26%. It should, however, be pointed out that last year's divisible surplus of £989,000 was after charging revenue with £138,000 for extraordinary flood repairs, and, if this item be eliminated, the real decline in profit has been as much as £393,000, or nearly 35%. Indeed, it has been even greater than this if allowance is made for the unknown sum taken from reserve in April, and which apparently is included in the profit balance of £734,000 shown for the year. Considering that the decrease in traffic receipts was about £512,000, whilst interest charges on balance were practically unchanged, the saving in expenses would appear to have been relatively small. However, the report must be awaited to ascertain these details. All that is known at the moment is that, including reserve appropriations, the profit-earning capacity of the Company in the past year has been reduced to a basis of only 2½% on the Ordinary capital. A comparison of profit earned, dividends paid, &c., for the last five years is given beneath:—

Buenos Ayres Great Southern Railway.

	1914-15	1913-14	1912-13	1911-12	1910-11

Rate per cent. ...	(4%)	(5%)	(7%)	(7%)	(7%)
Balance ...	...Dr. 258,000	Dr. 157,000	Cr. 337,000	Dr. 1,000	Cr. 13,000
Brought forward ...	316,000	473,000	136,000	137,000	124,000
Carried forward ...	58,000	316,000	473,000	136,000	137,000

* After charging revenue with £138,000 for extraordinary flood repairs.

Fortunately the Company is now doing better, the increase in traffic receipts since the close of June being nearly £152,000, or 17.6%. It is true that comparison is being made with the exceptionally poor results of a year ago, consequent on the outbreak of war, but with the financial and commercial outlook in Argentina brighter than it has been for a considerable time a rapid recovery in earnings and profits is now likely to be experienced. The price of the Ordinary stock is about 78, and on a 4% dividend basis the yield afforded is £5¼ per cent.

BUENOS AYRES WESTERN.

Unlike the other Argentine railway companies, the Buenos Ayres Western in the past year more than recovered the loss of earnings at one time shown in its traffic returns. In the middle of February the decline in receipts was as much as £188,000, whereas the year closed with a gain of about £20,000. This apparently has been accompanied by an increase in working expenses, for, although interest charges were probably not more £70,000 heavier, the profit for dividend comes out some £110,000 smaller than in 1913-14. The surplus available for distribution is about £459,000, equal to not quite 3½% on the Ordinary stock. The payment of 5% (less tax) calls for approximately £610,000, and there is thus a deficit in earning the dividend of £151,000. The decision of the directors to draw upon the reserve in order to maintain the dividend is in accordance with the settled policy of the board twelve months ago. Then the Chairman stated that, whilst it was not advisable in the circumstances to trench upon the fund, they would have had no hesitation in supplementing the dividend in this way had it not been for the outbreak of war. The amount now taken is £160,000, and the fund is thereby reduced from £930,000 to £770,000. This more than makes good the deficiency in earning the dividend, and the surplus of £9,000 is consequently added to the balance carried forward, which is raised from £47,000 to £56,000.

A comparison of the net results of working for the last five years is set out herewith:—

Buenos Ayres Western Railway.

	1914-15	1913-14	1912-13	1911-12	1910-11
	£	£	£	£	£

Carried forward ...	56,000	47,060	125,000	147,600	189,100

The immediate future of the Company largely depends on the coming crops, about which nothing definite can yet be said. The weather is fairly good at the moment, although rain is said to be wanted in the south, and, unless something unforeseen happens in the next two months, a satisfactory harvest will be reaped. If, moreover, prices continue high, and the produce of Argentina commands a ready market in the coming months, the wealth and prosperity of the country will be further largely augmented, and the railway companies will quickly recover lost ground. Since the beginning of July the earnings of the Buenos Ayres Western have increased £77,000, which exactly makes good the loss sustained in the corresponding quarter of the past financial year. This rate of improvement should be accelerated if the crops turn out well, and especially so if the growing wealth of the country induces purchases from abroad, and thus brings about an increase in up traffic, the loss of which is undoubtedly adversely affecting the companies at the present time. The price of Buenos Ayres Western stock is 83½, and, allowing for accrued dividend, the yield afforded by the distribution of 5% is nearly £6 5*s.* per cent.

INCH KENNETH RUBBER ESTATES.

THE amount of rubber harvested during the twelve months to June 30, 1915, by the Inch Kenneth Rubber Estates was 255,402 lb., as compared with 253,565 lb. for the previous year. But of this 11,730 lb. were unfortunately lost in consequence of the sinking of the s.s. *Troilus* by the German cruiser *Emden*. Consequently the amount of rubber sold for the twelve months was only 243,672 lb. The average yield was approximately 2.53 lb. per tree, or 268 lb. per acre. The crop realised a gross average price of 2*s.* 2.26*d.* per lb., as compared with 2*s.* 4.27*d.* for the previous year. The selling expenses, which included freight, dock charges, insurance, brokerage, &c., amounted to 1.83*d.* per lb., making a net price of 2*s.* 0.43*d.* per lb., as compared

with 2*s.* 2.54*d.* per lb. twelve months ago. A very satisfactory reduction has taken place in the f.o.b. average cost of production, which has fallen from 1*s.* 3.5*d.* per lb. to 10.6*d.* Altogether "all-in" costs, including depreciation, London selling charges, and home expenses, are 1*s.* 2.46*d.* per lb.

The following gives particulars of the land owned by the Company, the crops, prices realised, and expenses:—

Year ended June 30—						
Under cultivation ...	1,395.18	1,395.18	1,387.18	1,427.37	1,331.75	1,462
Total	1,707.46 Lb.	1,707.46 Lb.	1,698.38 Lb.	1,692.83 Lb.	1,692.50 Lb.	1,695 Lb.
Selling expenses ...						

The net proceeds of the rubber sold has amounted to £24,805, as compared with £28,049, but as the Company has been able to make a saving in expenses the net profit works out at £11,287, as compared with £9,689 twelve months ago. Consequently, it has been decided to increase the dividend from 15% to 20%, and, after writing off £2,582, the carry-forward amounts to £3,430.

The manner of distributing the profits for the past six years is as follows:—

Year ended June 30—	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£
Net proceeds of rubber sold	24,805	28,049	46,321	44,851	44,526	55,477
Miscellaneous receipts	556	634	1,051	423	815	440
	25,361	28,683	47,372	45,274	45,341	55,917
Estate expenses... ...	11,279	16,372	21,061	19,577	17,926	12,000
Home expenses, transfer fees, &c.	1,899	1,682	1,878	1,470	1,583	2,174
Interest	896	940	942	627	—	—
Profit	11,287	9,689	23,491	23,600	25,832	41,743
Dividends	5,400 (20%)	4,231 (15%)	12,713* (45%)	16,950 (60%)	16,500 (55%)	30,000 (100%)
	5,887	5,458	10,778	6,650	9,332	11,743
Reserve funds, &c. ..	2,582	4,500	10,000	7,133	8,000	8,000
	3,305	958	778	483	1,332	3,743
Brought forward ..	126*	1,319*	2,459*	4,481*	4,249	506
Carried forward ...	3,430	2,277	3,237	3,998	5,581	4,249

* After deduction of extra remuneration for directors.

The system which was in progress last year of thinning out has been continued, to the great benefit of the remaining trees, the individual yield of which has been largely increased, with a corresponding reduction of cost per lb. of rubber collected. The capital expenditure during the year was £1,290. The capital account is now closed, and all future expenditure on the present planted area will be chargeable to revenue. During the year Debentures to the amount of £5,000 have been repaid to holders at par, leaving still outstanding £15,000. The capitalisation of the Company is a moderate one, being £30,000 only, and there has been accumulated a reserve fund equal to the paid-up capital, namely, £30,000. It is practically all invested in the business, however. A summary of the liabilities and assets as at June 30 last is appended:—

LIABILITIES.	£	ASSETS.	£
Issued capital	30,000	Purchase price, &c.	65,502
Debentures	15,000	Buildings, &c.	6,650
Reserve fund	30,000	Investments . . .	9,606
Debenture redemption fund...	9	Stock	5,083
Sundry creditors ..	2,125	Sundry debtors . .	603
Profit and loss .	10,063	Cash, &c. . . .	8,744
	96,188		96,188

It is hoped that the crop for the current year will exceed 300,000 lb., and there should be little difficulty in securing a higher average price for the crop than was the case last year, and if the Company is able to reduce still further the cost of production, which is still relatively high, the possibilities for a further increase in dividend are good. The present price of the £1 share is 2½, and on a 20% basis a yield of 8½% is forthcoming. On the whole, shareholders should be able to count on a higher return for the current year.

Mining Topics.

With so much attention now being given to Eastern Rand affairs, we would call the attention of intermittent readers of The Statist, and also those who have been too busily engaged in other directions for the time being to read The Statist, to the series of articles we have recently given upon the Eastern Rand, and which we hope to continue. Last week and the week before we gave some extended remarks upon the New Modderfontein Company, while this week we deal with the Modderfontein B. We purpose continuing these articles upon individual companies.

The further rise to a record price of New Modderfontein shares is to be attributed both to the recognition of the intrinsic merits of the Company, and the favourable influence of the announcement that the long-continued expression of desire of shareholders for the splitting of the £4 shares into four shares of £1 each is likely to be brought about early next year.

An incident of the week has been the severe fall of ground reported to have occurred at the 9th and 10th levels of the Village Main Reef mine, and it is expected to cause complete cessation of, or material reduction in, output for three weeks or a month. Earth tremors are reported to have been felt over an extended area of the Rand on Wednesday last. The effect of its trouble upon Village Main Reef shares was a decline to the record price of 20*s.*

Geduld.—The following is a cablegram of date October 1:—"The board of directors has decided to immediately increase the capacity of the reduction plant to enable it to crush 40,000 tons per month. The increase will be so made as to permit of a still further addition at a minimum of expenditure, and development will be continued at full speed with this end in view. It is expected that the increased plant will be in operation before the end of next year. The expenditure involved will not interfere with the payment of dividends, as the necessary funds are in hand."

Gaika.—The ore reserves at the end of the June quarter are returned as 95,570 tons of an average assay value of 60*s.* per ton. This shows that the rate of development being effected is equal to the quantity of ore being milled.

NEW MODDERFONTEIN.

The report of the New Modderfontein has been issued this week, and shows that the sum available for the dividends aggregating 31¼% exceeded the amount required by £144,354. This as to £21,462 has been used for capital purposes and the position strengthened by increasing the unappropriated profits from £230,114 a year ago to £353,182 at June 30, 1915. After the appropriation to capital purposes from the profit of the year to June 30, 1915, the cash held by the Company, less the amount for the final dividend payment and sundry creditors, amounted to about £237,000. In the main the difference between the above figures and those we gave in The Statist of September 18 arises from the inclusion in the annual report of £30,000, the "Modders" quota of special war levy, the Union of South Africa Government, in respect of its financial year ending March 31, 1916, having imposed a special tax of £500,000 upon the Rand industry.

The ore reserves given this year appear to be more conservatively estimated than at June 30, 1914. After excluding all ore partially blocked out below the 10th level the net remaining ore, after deduction of shaft and boundary pillars, is returned as 5,719,000 tons, of an average assay value of 34*s*. 7*d*., comparing with 5,913,700 tons, of an average assay value of 35*s*. 3*d*. a year ago. A year ago the ore reserves were based on a stoping width of 63 inches, while this year 62½ inches is taken.

In the report of the Consulting Engineer there occur the following remarks as to the ore reserves:—

(1) The tonnage of ore partially developed in the circular shaft section totals just over one million tons.

(2) During the year very considerable additions will be made to the ore reserve, which will then be still more capable of supplying the requirements of a much larger reduction plant.

It is foreshadowed that to complete the extra plant will take about two years—*i.e.* to about the middle of 1917.

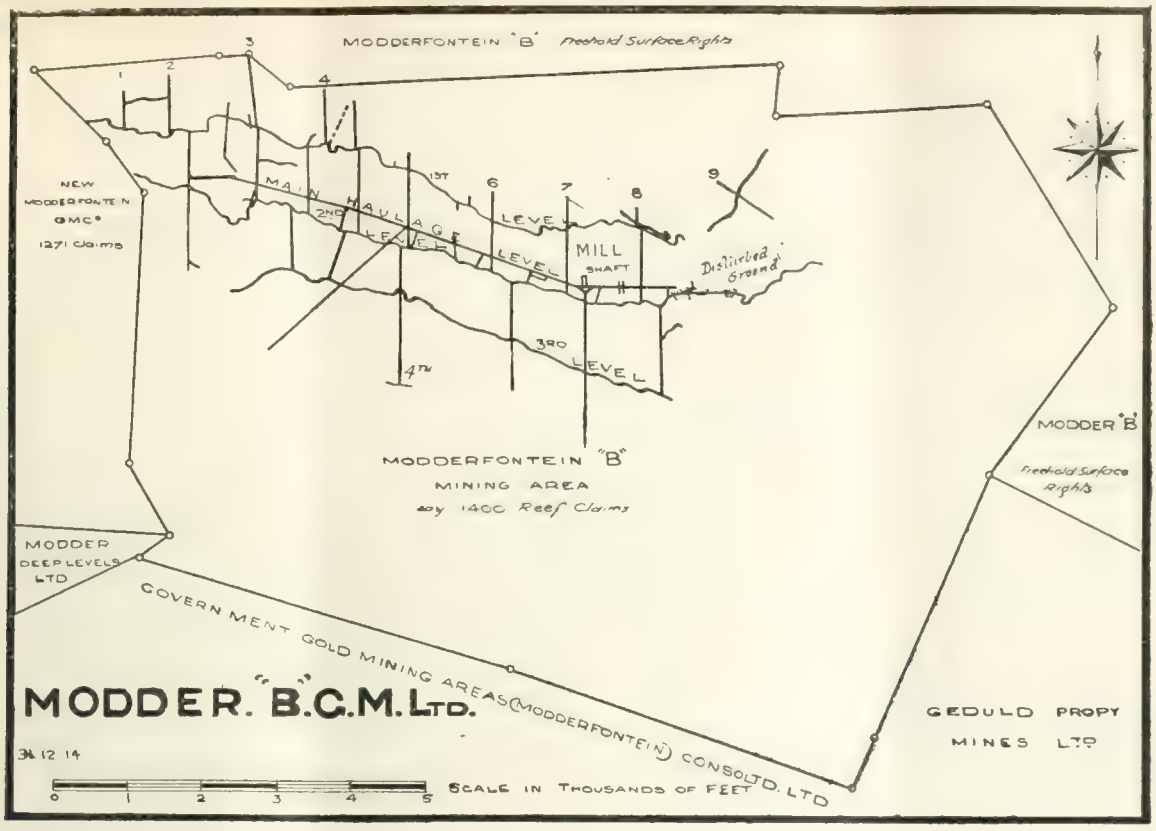
RE-CONVERSION OF £4 SHARES.

Intermittently for years we have called attention to the anomaly of this important Rand gold-mining Company retaining its capital in the present form of £4 shares. There were only two other instances in the history of the Rand where companies had or have the capital expressed in £4 shares. With one of these—the Wolhuter—the directors not so very long ago extinguished the £4 form by giving for each old share four £1 shares, while the other—the City and Suburban—retains its shares in £4 form.

A notice has this week been issued that the directors of the New Modderfontein Company stating in response to numerous applications from shareholders a meeting will be convened for January next to consider the subdivision of the capital into £1 in place of £4 shares. It is true from the intrinsic point of view it is immaterial whether a £4 share is quoted at £16 or a £1 share at £4. The dividend yield is the same in both cases, but in the one instance we have, in market parlance, a heavy share, and in the other a share of smaller denomination not only appearing cheaper but being in a more readily marketable form.

Few of the present generation of speculative investors in mines are aware that in quite early days of the Modderfontein the old £1 shares of the Company, then having a comparatively small capital, went up at one time to over £20 each. On a rearrangement of the capital, and mainly for the purpose of securing a quotation for the shares on the Paris Bourse, and introducing them on the Parquet or official market (where the lowest denomination of shares was £4, or 100 francs), it came about that the shares, which in their £1 form had formerly stood—on the mere ideas of big possibilities—at an enormously high price, subsequently after the property had been proved to be valuable receded in the form of £4 shares to as low as par. All the huge inflation of price had disappeared.

The retention of a share of £4 denomination obscures the position. A few years ago Modderfontein shares were higher per £1 than Modderfontein "B" £1 shares, and now the reverse. Now that in equivalent £1 form the Modder shares are about £4 and the "B" shares £5½, if so quoted there would be a disposition to investigate the respective merits of the two undertakings to see why there should be such a remarkable change. Many speculative investors, seeing a price of £15½ for Modderfontein shares, do not realise they are of £4 denomination. We imagine shareholders will insist on this matter of the conversion of £4 into four £1 shares.



MODDERFONTEIN B.

As far back as the early nineties capitalists sought to acquire areas in the Eastern Rand including areas now known as the New Modderfontein, and further east the Modderfontein B. We have already dealt *in extenso* with the history and progress of the New Moddderfontein, and we will now give attention to the Modderfontein B area.

A series of prospecting pits were put down in this B property in the early nineties. Indications of reef values and widths were not at first exhilarating, and for years the property was allowed to remain fallow. With actual encouraging results secured by the neighbouring New Modderfontein mine, a project was formulated for the enlargement of the initial area of the Modderfontein Extension property—now known as the Modderfontein B—and to provide the Company with adequate capital wherewith to pursue developments with the view of bringing the area to the stage of production. Of the considerable area passed over to the Modderfontein B Company part is what is known as estate area. Some outside reef area and other that at present the Company has only surface rights of. But beyond such estate area the Company secured mining claims, and it is reckoned that about 1,400 claims of mine area are reef-bearing. The extent of the mining ground is considerable—very close to 2½ miles on the strike of the reef from east to west, and an average of over 1¼ mile on the dip from the outcrop of reef. The plan we give shows the position of this mining area, which lies east of the New Modderfontein and Modderfontein Deep, north of the Government Areas and north-west of a portion of the Geduld that is being operated upon.

Briefly we may set out that after the reconstruction and provision of capital in 1908, a start was made in the sinking of two large pattern shafts, one to the west and one to the east. The developments effected by means of the western shaft were at first the most promising, while initial developments at the eastern shaft were of discouraging character, as calcite was met with. A policy of perseverance was pursued, and the calcite was passed through, driving was effected to the west, and eventually the eastern shaft was adopted as the hauling shaft, and the sinking of the western shaft was discontinued. The mine does not suffer from being worked with only one main shaft, for the reason that there are approximately nine prospecting shafts which connect with the 1 to 1½ mile of underground workings and afford ventilation to the mine. The plan shows the location of the eastern shaft, adjoining which is the site of the mill and reduction plant. It also shows how driving has been effected for a considerable length from east to west at three levels, and by the end of 1914, according to the official plan issued by the Company, driving had been commenced at the fourth level.

No apprehensions were entertained as to the nature of the ore body to the west of the property, for the reason that the eastern portion of the adjoining New

Modderfontein mine have disclosed good ore, and this has continued, certainly as to the upper levels in the Modderfontein B. Doubt is felt however as to the nature and value of extension of reef in the eastern portion of the B Company's ground. Apropos of this doubt the first reason for entertaining it is that, a little to the east of the eastern shaft, disturbed ground is met with, but we note from the report of the Consulting Engineer accompanying the annual report for 1914, that from the furthest eastern prospecting shaft—winze—driving has been effected both to the east and to the west. While at this point the western drive has disclosed disturbed ground, is noteworthy that driving to the east for approximately 640 feet is reported to have disclosed ore of average value of 31*s.* 10*d.* per ton over the stoping width, and the actual stoping width adopted in 1914 was 59 inches. Moreover, the report says that during the current year developments on this eastern section of the mine will be effected as rapidly as circumstances permit. Referring above to the stoping width, we mention what has been the average width adopted in respect of extraction of ore during 1914, but the ore reserves at December 31, 1914, were estimated over a stoping width of 55 inches, giving the quantity of 2,772,540 tons of an estimated value of 36*s.* 1*d.* per ton.

Prior to 1908, it may be recalled, the property, except for prospecting at surface, was entirely untouched, but after 1908 developments were pressed on so quickly, and with such good results, that a few figures may be given of the progress made. In the first place the yearly progress of developments may be set out:—

	Reef Exposed	Width Inches	Assay Value	Estimated Value
	Feet			
Year 1910	11,295	11·85	1·0·4	1·.18
,, 1911	6,···	11	11··	1·.18
,, 1912	3,489	15	···	1,492
,, 1913	····	12·3	149·1	1,833
,, 1914	5,170	18	102·1	1,846
,, 1915 Mar. qr.	2,079	19	89·6	1,700
,, ,, June qr.	1,···	23	77·3	1,776

Of course, in the early part of the period covered by the above table it was all development work, and for a period every labourer was put on the work of opening up the mine. Subsequently much labour was employed on plant erection, and later on production. Quite late in 1911 a start was made with crushing, 80 stamps at first, and by the time crushing commenced there had been accumulated very close to 2,400,000 tons. In the period of crushing from December 1911 to December 31, 1914, there were milled an aggregate of 1,232,067 tons. In the interval developments were effected to a greater extent than the amount of ore consumed; hence at December 31, 1914, there remained 2,772,540 tons of developed ore reserves above referred to. In all probability the ore reserves, despite the increased use of ore that has been going on in 1915, will be about maintained, and now that an enlargement of plant has brought up the capacity to about 45,000 tons a month, or, say, 540,000 tons per annum, the ore in sight may roughly be calculated to last the mill for not far short of five years. The ore reserves in recent years have been as under:—

	Tons	Value	Stoping Width Inches
		£ *s.* *d.*	
1911	2,···,···	31 10	51
1912	2,···,···	·· ··	54
1913	2,800,400	34 10	···
1914	2,772,540	36 1	55

Now there has been a vast difference in the conditions of operating the Modderfontein B and the New Modderfontein, for with the New Modderfontein the start of equipment was made under adverse conditions and a high rate of working costs. In the interval since a huge amount of modernisation and increased efficiency of plant has been brought about, and the plant of the Modderfontein B is of the most up-to-date pattern, while considerable savings are effected through the extensive use of labour-saving appliances not known of 10 years or so ago. Hence the feature that for 1914 the working costs of the Modderfontein B Company were 15*s.* 7*d.* per ton, and the working costs of the New Modderfontein Company, say 10 [illegible] high as 25*s.* 7*d.* per ton. Before dealing with the outlook we may first of all set out the particulars of the results secured from the start to the most recent date, and these are given below:—

Year ended Dec 31	[illegible]	Tons [illegible]	Sorted [illegible]	[illegible]	Value per ton	Profit	[illegible]
					£ *s.* *d.*		
1911 (7½d.						80,997	
1912			11				
1913				781,428	38 9		
1914						342,328	
1915.							
March							
June							
July							
Aug.							

Detail of the profit and loss statements of each of the last two years is given below, and it will be noted from the previous table that the Company in respect of 1914 paid 55% dividends, against 45% dividends for 1913, and after provision for dividends was able in each year to apply considerable amounts out of profits towards capital purposes, that is for the purpose of construction of additional plant. It so applied £25,733 in 1913 and £41,592 in 1914, while in the current year, according to the quarterly statements, the outlays on capital account have been very small, for the six months to June 30 only aggregating £4,000.

Capital, £700,000.

	1914		1913	
	£	Per Ton	£	Per Ton
Gross receipts	(440,000 tons) 785,567	35,10	(404,580 tons) 784,425	38,9
Expenses	342,527	15/7	330,898	16,4
Mine profit ...	446,340	20,3	453,530	22,5

Carried forward ...	183,140		199,163	

The Company has now in operation, as we have already stated, plant to deal with approximately 540,000 tons a year. Such plant is 80 California stamps and 16 Nissen stamps, also five tubes and necessary cyanide, &c., appliances. There will not be a total of so much as 540,000 tons in respect of 1915, for only now is the enlarged plant in full operation; but it may be admissible to make a forecast of the results of 1915, relying upon the actual results made known for eight months and estimating the remaining four months.

Estimate for 1915 (*assuming* 500,000 *Tons Milled in the Year*).

	£	£
Receipts, 8 months to August 31		654,000
,, 4 ,, at, say, £94,000 per month		376,000

We defer to next week a consideration of the life of the mine and a valuation of the shares.

KALGURLI.

As in the case of other West Australian mines, the life of the Kalgurli has several times been threatened, but as each successive alarm has been unfounded shareholders have conceived that there was "plenty of life in the old dog yet." The report of the General Manager issued this week, however, does not encourage the retention of this belief. On the subject of the ore reserves he states that, in the absence of development of any new ore bodies of much importance, the tonnage available would have shown heavy reduction had it not been that some blocks have produced considerably more ore than anticipated. The pay ore remaining in the mine is thought to be sufficient to supply the mill for one year, but as there is a limited supply of high-grade ore the future mill returns must be considerably lower than the recent average of 40*s.* per ton. The failure of the ore bodies to persist in depth necessitates reliance on the old levels, and these have been closely explored already. Therefore, the General Manager concludes, "unless we are fortunate enough to discover something in unexpected quarters, the profitable life of the mine cannot extend much beyond the period above indicated," viz., one year.

In the circumstances the fall this week of the Company's £1 shares from 30*s.* to 18*s.* 6*d.* is not surprising.

ST. JOHN DEL REY.

MINING AT A MILE BENEATH SURFACE.

The St. John del Rey has long since passed the age of threescore years and ten allotted to man. The Company was formed as long ago as 1830. In 1834 it abandoned the property it was originally formed to acquire, and commenced to work the Morro Velho mine, situated in the State of Minas Geraes, Brazil. In 1868 a fire caused a collapse of the mine, and not until 1874 could mining operations be recommenced. In 1886 another disaster occurred, resulting in the entire destruction of the excavations down to a depth of 1,850 feet. Then entirely new shafts were sunk, and since 1888 operations have been attended with complete success, about 3,000,000 tons of ore having been extracted, yielding gold of a value of about £7,600,000. Altogether from commencement of operations gold aggregating about £11,000,000 in value has been obtained. Naturally a mine cannot be operated for so many years without the workings becoming very deep, and the St. John del Rey's lowest developed level is 5,226 feet deep vertically, or all but a mile beneath the surface, while two further levels have recently been commenced, respectively 5,526 feet and 5,826 feet deep from the surface. Despite the great depth of the mine, however, recent operating results have been very good. Indeed, the financial year ended February 28, 1915, was a record one, both the gold yield and the mining profit being larger than obtained in any previous similar period, and for the first six months of the current year the high gold yield has been maintained. As regards working costs, naturally the increasing depth of the mine has made its influence felt, and, if one includes development and necessary capital outlays, working expenses per ton of ore milled have risen appreciably in the past few years; but purely mining costs have been remarkably well kept down in the circumstances, and this reflects very clearly the good management of the undertaking. It is to be noted in respect of the last financial year that the low rate of exchange was an appreciable help to working costs. The progress of milling operations since 1900, and the fluctuations in the price of the Company's £1 shares, will be seen from the following:—

Year to Feb. 28	Ore Milled Tons (2,240lb.)	Gold Yield £	Gold Yield Per Ton	Extraction %	Mining Costs* Per Ton	Mining Profit* £	Mining Profit* Per Ton	Price of Shares End of Period
1900 ...	120,465	320,566	53 3	—	24/6	172,844	28/9	27/6

* Before allowing for development expenditure, State and Federal duties, and transport charges.

From the mining profits shown above development expenses, Government duties and transport charges, office and other expenses have to be deducted, and sundry revenue added, before the net profit is arrived at. Allowing for these items the net profit of the year ended February 28, 1915, amounted to £135,765, in comparison with £109,364 in the previous year. In the past six years a very conservative policy in the matter of dividend distributions has been adopted, large amounts of the profits earned each year being set aside for capital expenditure in view of the increasing depth of the mine. In respect of the year to

February 28, 1915, of the net profit of £135,765, as much as £60,000 was transferred to capital account. The 10% dividend on the Preference shares absorbed £10,812, while the Ordinary shares likewise received 10%, as in the previous two years, requiring £54,626. Thus the dividend payments called for less than 50% of the net profit earned.

The issued capital of the Company is £646,265 in 100,000 10% Preference shares and 546,265 Ordinary shares, both of £1 denomination, and in addition £13,370 of 7% Debentures are outstanding.

A comparison of the net profits earned in the past 11 years and the manner of their allocation will be seen from the following table, as will also the ore reserve position and the increasing depth of the mine:—

Year to Feb. 28	Net Profit*	Transferred to Capital Acct.	Bond Interest	Bond Redemption	Pref. Div.	Ordinary Dividend		Estimated Ore Reserves Tons (2,240lb.)	Vertical Depth of Lowest Levels Feet
	£	£	£	£	£	£	%		
1905 ...	49,170	7,447	7,969	—	6,113	28,679	5	—	3,400

* After deducting income tax and directors' percentage.
† Dividend for second half of year paid less income tax, previous dividends free of tax.

It will be noted above that during the year ended February 28, 1915, there was a substantial diminution in the quantity of the ore reserves. This is attributable to the fact that no new level, or horizon, as it is officially termed, was opened up in the period. For the past three years the lowest developed horizon has been the 18th, at 4,900 feet depth from adit level, equal to 5,226 feet from surface. For the purpose of attacking ore at greater depth a shaft termed "G" has been sunk from the end of a tunnel at the 16th horizon, and from this "G" shaft horizons 19 and 20, respectively 5,202 feet and 5,502 feet below adit level, have been commenced. While this work is being carried out the addition of ore to the reserves has been in abeyance, and this explains the falling off in the ore reserves. However, the 19th horizon is expected to be developed and ready for raising ore by June next, and the 20th horizon by April 1917. The opening up of these two new levels is expected to add something like 600,000 tons to the ore supply, and it is believed that values will be maintained.

If the mine could be worked down to the 20th horizon only it might be assumed that its life would not be longer than about six years. However, there is no intention to stop work at the depth attained by the 20th horizon. The Superintendent's last annual report deals very exhaustively with this subject. He says, in effect, that except for the rapidly increasing temperature of the mine, supposing the lode continued the same size and value to horizon 26 (vertical depth 7,626 feet), it could be worked profitably to that point and even to a greater depth, but from the temperature chart the rock at horizon 26 would be no less than 126.5° Fahr. at the moment of opening. It is not believed that much more can be done in present circumstances in the matter of increasing the volume of ventilating air, but the opinion is advanced that by artificially cooling the air passed down the mine the difficulty can be got over and the mine worked to considerably greater depths than yet reached. An air cooling and drying plant has been designed, which, it is stated, "represents a thoroughly practicable scheme which will effectually remove the one serious obstacle against the Company being able to work the mine to a great depth."

Of course, the more the depth of the mine increases, the greater will be the need for capital expenditure, and therefore the policy of allocating a large proportion of the yearly profits for this purpose will have to be maintained. Happily, thanks to this policy in the past, the present financial position of the Company is strong, the surplus liquid assets at end February 1915 amounting to £135,000.

The price of the Ordinary £1 shares is 15*s.*, and though, as we have shown, the mine is extraordinarily deep, its future may yet warrant the present quotation. Furthermore, the Company owns a large extent of very rich iron-bearing area in Brazil, and this asset, already of considerable value, may be expected to become still more important in course of time.

Geduld Proprietary.—The capital authorised is £1,000,000; issued, £970,000, in £1 shares. Plant has been enlarged to 60 stamps and five tubes, having a capacity of 26,000 tons a month. There is the probability of early increase of plant to 35,000 or 40,000 tons a month.

LONDON, SATURDAY, OCTOBER 2 1915.

WAR FINANCE.

One cannot but wish that those persons who are spending money so freely and so gaily at the present time should be placed under the necessity of answering the questions of how the country's great national expenditures are to be met in the absence of private economies, and how it will be possible for the country to provide for its present adverse foreign trade balance unless everyone contributes his share by keeping down his domestic expenditures to the lowest possible level consistent with efficiency. Already practically the whole of the War Loan issued early in July has been expended, and in a very short time a fresh loan will be needed. The whole of the Government's existing financial resources consist of not more than about £75,000,000 still to be received on account of War Loan, the £50,000,000 about to be raised in the United States, and current revenue, which may be expected to come in at the rate of about £4,000,000 a week. Roughly speaking, therefore, the funds in hand and the revenue that is being received are now only about sufficient to last not longer than until the end of October, and it will soon become necessary for bankers to subscribe for additional large amounts of Treasury bills, while preparations for another great loan cannot be long delayed. Mr. McKenna recently told the country that the expenditure in the current year would be £1,590,000,000. To this sum, however, must be added an expenditure of £3,000,000 against capital and the repayment of £160,000,000 to the Bank of England. Hence the total sum which the country has to provide in the current fiscal year is no less than £1,753,000,000. Here are the figures:—

Estimated Expenditures Current Fiscal Year.

	£
Expenditure	[illegible]
Capital Expenditure	3,275,000
Repayment to Bank of England	160,427,000
Total	1,753,408,000

Of this total of £1,753,000,000 the expenditure up to the end of September has been £674,497,000 in respect of interest and services, £160,427,000 has been repaid to the Bank of England, and other expenditures have amounted to £2,474,000—an aggregate expenditure to date of £837,398,000. The actual expenditures for the first six months of the year are set out below:—

Actual Expenditures Six Months to September 30.

	£	£
June Quarter	[illegible]	[illegible]
September Quarter	116,021,000	1,322,000
Total	674,497,000	3,681,000
Repaid to Bank of England	160,427,000	
Other Expenditures (net)	2,474,000	
Total Expenditure	[illegible]	

This means that if the estimates of expenditure are attained the sum that will have to be provided in the last six months will be no less than £915,000,000, or at the rate of exactly £5,000,000 a day. In the first six months of the year the revenue has been £102,867,000, and the net sum borrowed has been £716,268,000, leaving a deficiency of £19,264,000 to be provided out of the cash balance. The manner in which the expenditures of the country have been financed in the first six months of the current fiscal year is shown below:—

Revenue Expenditure and Loans Six Months to September 30, 1915.

	£	£
Expenditure		[illegible]
Revenue		102,867,000
Deficit		734,531,000
	£	
4½% War Loan	528,000,000	
4% War Loan	35,798,000	
Exchequer Bonds	242,345	
Treasury Bills (net)	176,338,000	
Other Advances	1,000,000	
Total	741,378,345	
Debt Repaid	26,110,000	
Net Sum Borrowed		715,268,[illegible]
Deficiency		[illegible]

Thus towards meeting total estimated payments of £1,753,000,000 for the current year, £818,000,000 has been provided so far, leaving a balance of £935,273,000 to be supplied in the second six months. The calculation is as follows:—

Estimated Payment 12 Months to March 1915. and sums already received.

	£	£
Payment to September 30	837,398,000	
Last six months	916,010,000	
Total Year		1,753,408,000
Revenue Received	102,867,000	
Sums already borrowed	715,268,000	
Total sum provided first six months		818,135,000
Balance to be provided 6 months to March 31, 1915		935,273,000

If the Budget estimate of revenue is not exceeded, the amount of income that will be received in the six months to the end of March next will be £202,000,000. To this should be added the balance of the War Loan not yet received. How much this will amount to has not been publicly stated. Mr. McKenna informed the House of Commons that subscriptions to the War Loan through the Bank of England had amounted to £570,000,000, and that substantial subscriptions had been received through the Savings Banks. But we find from the returns of Savings Banks deposits that the money needed to meet War Loan subscriptions by depositors was almost entirely drawn from the deposits of Savings Banks, which between June 12 and September 4 were reduced nearly £23,000,000. Inasmuch as the Government has to provide the money for these withdrawals, it is evident that the subscriptions for the War Loan received through the Post Office must be almost entirely disregarded. The

diminution in the deposits of the Savings Banks since June is shown below:—

Deposits of Savings Banks.

1915	Trustee £	Post Office £	Total £
June 12	55,118,000	199,156,000	254,274,000
July 10	54,607,000	197,512,000	252,119,000
Aug. 7	50,372,000	181,649,000	232,021,000
Sept. 4	49,826,000	181,632,000	231,458,000
Reduction since June	−5,292,000	−17,524,000	−22,816,000

In view of this reduction in the deposits of the Savings Banks it is presumable that the total amount to be received on balance in respect of the War Loan is not a very large one. On the assumption that the net amount of the Loan was no greater than the subscriptions to the Bank of England the sum still to be received from the War Loan is not more than £42,000,000. If, however, we include Post Office subscriptions, the amount to be received may be about £75,000,000. To this must now be added £48,000,000 net that will come from the American loan and the revenue to be collected in the last six months of the year. The manner in which the revenue has so far come in is exceedingly encouraging, and we anticipate that the estimated income of £305,000,000 will be exceeded. Should, however, it not be exceeded, the amount of revenue to be received will be £202,000,000. Thus the total funds in sight to meet the payment of £915,000,000 in the next six months is £325,000,000, and the deficiency still to be provided is about £600,000,000. If the cash balance is restored to the amount at which it stood on April 1 last, the deficit to be provided in the current six months is £610,000,000. The calculation is below:—

Estimated further Borrowings next Six Months still needed to cover Budget deficit for year to March 31, 1915.

	£
Balance of Expenditure to be provided 6 months to March 31, 1915, as above	935,273,000
Sums in Sight.	
Balance of War Loan, say	75,000,000
American Loan	48,000,000
Revenue to be received	202,000,000
Total sum in sight	325,000,000
Remaining Deficit to be provided for	610,000,000

Of course, no one doubts that this great sum of money will be obtained by the Government in one way or another. But it is of the greatest importance that the country should recognise the vastness of the sum to be raised and should take in good time the measures necessary for providing it. Certainly the extravagant expenditures that are still going on, taken in conjunction with our enormous adverse trade balance and the relatively onerous terms which we have had to pay for money borrowed from a foreign nation, should make even the man in the street stop to think and debate with himself whether the situation ought not impose rigorous economy as a duty upon every British citizen, whether man or woman.

THE LOAN FROM AMERICA.

The Franco-British delegation to the United States for the purpose of arranging for credits with which to purchase American goods are to be highly commended for the manner in which they have carried out their very responsible and important mission. They have induced American bankers to undertake a financial operation greater than has ever hitherto been performed by the United States, and they have thus provided means for the French and British nations of purchasing much larger quantities of American goods than otherwise would have been possible. The transaction will indeed be of benefit not merely to America, which will be able to market abroad a much greater quantity of goods than otherwise would have been possible, and to Great Britain and France, who have obtained the means of buying, but to the whole world, which will derive indirect advantage from the maintenance of Europe's purchasing power. The reasons for the credit are twofold. First of all, both France and England have become accustomed to purchase large quantities of American goods every autumn, more especially of cotton, and have obtained the funds with which to purchase mainly from the great expenditures of American tourists during the summer and autumn. How great these expenditures are is difficult to estimate. After a careful investigation the writer of this article came to the conclusion that the net sum expended by American tourists on travelling to Europe and during their stay in Europe was no less than £40,000,000 a year, and that beyond this sum they spent a great deal of money upon the purchase of goods which figure in the trade returns as imports into the United States. For instance, a great deal of American money is spent upon tailoring in London, and still more is spent upon Paris costumes, while the expenditures upon jewellery, furniture, and artistic productions of all kinds and descriptions are very large. Probably altogether the expenditures in Europe of American tourists, including goods purchased, is not far short of £80,000,000 a year. This sum, of course, includes the substantial amounts remitted to American residents in Paris and elsewhere who have now returned to the United States. The outbreak of war has practically stopped these tourist expenditures, and consequently Europe has not the means of paying for the goods normally bought from the United States to the extent of some £80,000,000 because of the loss of income that has been sustained through the absence of American tourists. Hence, unless America were prepared to purchase securities of one kind and another, either American or foreign, it was obvious that Europe in general, and France, Italy, and England in particular, would not have been in a position to purchase the normal amount of goods this autumn which they usually buy from the States. And just when these countries are denuded of a great deal of income and the means of purchasing American goods, they need to buy a much larger quantity than usual. In part this arises from the closing of the Dardanelles, which prevented Russia from exporting her food supplies, and had made the consuming countries more dependent than ever upon other food-producing nations, so that the demand for American productions became greater than usual, while their means of paying for imports became reduced. These considerations are altogether apart from, and distinct from, the purchase of munitions of war in the United States. It was necessary for France and England either to borrow in the United States or to sell American securities in order to obtain the means of purchasing the great quantities of food and raw material they need for their sustenance. The joint loan of £100,000,000 arranged for by the Commission is no more than is required for this purpose. How the Allies will finance their purchases of munitions is another matter. Presumably the supplies of munitions will be paid for by sales of American securities.

From the statement we give elsewhere it will be seen that even during the months of small exports the excess of exports from over the imports into the United States has averaged over £25,000,000 a month, and partly in consequence of the loan we anticipate that in the next few months the excess of exports may amount to between £30,000,000 and £40,000,000 a month. And it is obvious that if the United States continue to sell goods so freely it must take payment for them either in gold or in securities. American banks are very full of gold and need no additional supplies of the metal. Consequently the only available method of taking payment for the trade balance is by the purchase of securities, and it is evident that America by means of her exports will be in a position to buy in the next twelve months a very much greater quantity

of securities than £100,000,000. We anticipate, indeed, that America will by means of her exports be prepared to purchase between £300,000,000 and £400,000,000 of securities in the current crop season from August 1 this year to August 1 next year.

The terms of the new loan are about what we expected them to be. The bonds are to be jointly guaranteed by France and Great Britain, and will be repayable at the end of five years or convertible at the option of the holder into 4½% bonds of the British and French Governments, repayable not earlier than fifteen years and not later than twenty-five years from the present time by the two Governments jointly and severally. The bonds will be issued to the public at the price of 98, and, including redemption, will thus yield £5 9*s*. 3*d*. per cent. The whole issue is to be sold to an underwriting syndicate at the price of 96, so that as far as the British Government is concerned the rate of interest paid is equal to £5 18*s*. 10*d*. per cent. At first sight this rate of interest seems to be a high one, especially in comparison with the rate of interest at which both the French and British Governments can borrow in their own countries. But it is essential to remember that hitherto the American people have had little or no experience in the matter of foreign investments, and that they are able for the most part to invest their money in their own country at high rates of interest. Consequently, in order to place so great a loan, it was necessary to offer a rate of interest that would cause the loan to compete on equal terms with other issues upon the American money market. Moreover, in considering the terms on which the loan has been obtained, one may reasonably expect that at the end of five years the loan will be converted by the holder into 4½% bonds with a currency of at least ten years, and possibly of twenty years. Therefore for all practical purposes the loan may be regarded as a 4½% issue at the price of 93½, affording a yield of £5 2*s*. 8*d*. per cent. on the basis of a currency of fifteen years and of £4 19*s*. 3*d*. on the basis of a currency of twenty-five years. There is, moreover, another factor to take into account in considering the relatively high yield afforded, namely, the heavy loss by exchange that would fall upon the British people in making remittances to America had no loan been concluded. It will be remembered that prior to the negotiations for the loan, exchange fell to 4.50, and had negotiations for the loan not been initiated the fall might not have stopped even at this figure. Hence persons in this country, including the British Government, who had to make remittances for goods ordered from the other side, would have been subjected to a very heavy percentage loss in making remittances. Even at the current rate of 4.72 for sight drafts the depreciation in exchange is 3%, and had no loan been arranged the depreciation might have been over 10%. When these matters are taken into account it will be obvious that the terms of issue are not nearly as onerous as they appear to be from merely comparing the rate of interest on the new loan with that at which the British Government can borrow in this country. Of course we realise that the difference between the rates of interest is much greater than it appears to be, as the interest on British loans is subject to income tax, and the interest on the Allied loan is to be free of income tax. But such considerations are quite valueless at a time such as this. The fact of the matter is that the country is spending an enormous sum of money and that if it does not borrow money abroad it cannot spend nearly as much as it is now doing. Indeed, it should be realised that unless we are able to borrow money from the United States, or sell securities to that country, it will be practically impossible for us to pay for the munitions ordered, or to buy the great quantities of cotton and wheat which we need for the support of our people and the maintenance of our production.

Last week we showed that on foreign trade account, including the promised advances to our Allies, the trade balance against Great Britain is now at the rate of over £500,000,000 a year, and, including the additional loans we shall probably be called upon to make to our Allies before the end of the current fiscal year, the adverse trade balance is at the rate of at least £600,000,000 a year. It will be quite obvious to everyone that we cannot possibly meet this adverse trade balance unless we borrow from abroad at rates which will enable us to secure the greater part, if not all, the money we need, and that this consideration is a much more important one than the mere question of an extra rate of interest on a foreign loan.

The proceeds of the new loan are to be divided equally between Great Britain and France. Hence, towards meeting our adverse trade balance at the rate of £600,000,000 a year, we have secured £50,000,000, and the remainder has to be provided for by economy in consumption, bringing curtailed imports, by increased exports, by shipments of gold, or by sales of securities.

The task of negotiating the loan has undoubtedly needed great tact and skill, and it was a happy inspiration which induced the Chancellor of the Exchequer to invite Lord Reading, whose sound judgment and great ability are so widely recognised, to act as Chairman of the Commission and to appoint as his colleague Sir Edward Holden, with his wide knowledge of financial conditions on both sides of the Atlantic. Indeed, all the Commissioners, both English and French, as well as Messrs. J. P. Morgan and Co., the British commercial agents in the United States, are to be congratulated upon their success in arranging for a credit large enough to take care of the exchange for some time to come.

THE WAR.

For eight or ten days now our troops and our gallant Allies of France have been making continuous and considerable progress. As we observe elsewhere, it is clear that the supply of munitions is now so plentiful that they are able, not only to assume the offensive, but to overpower the enemy even in gun-fire. There are evidences, likewise, that the enemy, in their overconfidence regarding their chances in Russia, have been drawing too seriously upon the forces in France and Belgium; that, consequently, at every point they were outnumbered and outmatched; and that, moreover, they have lost confidence in themselves, and no longer display that courage and vigour which they showed until recently. The capture of so extensive a line of trenches and of as many as 121 guns in Champagne alone seems to testify to this. We do not say all this with any wish to disparage the fighting qualities of our enemies. Still less do we desire to inspire too great confidence at home. We have an exceedingly difficult task before us yet; and we shall do well, therefore, to remember that war is always liable to surprises. Still, there is confidence on the part of our leaders and our men, and for more than a week now they have proved that they are more than a match for the enemy. In the Eastern theatre of warfare, likewise, there is decided improvement. The Russians, obtaining fuller supplies from the Japanese as well as from ourselves and from the United States, are once more able to take the offensive in certain directions and to inflict losses upon the invader. Moreover, it is to be recollected that the winter is now rapidly approaching, and that, therefore, the position of the Germans there is becoming perilous. It is reported from Petrograd that, with their usual rashness, those in the highest command in Germany are once more transferring troops from the East to the West. If the news is true, it is highly satisfactory, for it shows, firstly, that the brilliant successes in France and Flanders are relieving the pressure upon our Russian Allies; and, secondly, that the enemy is not able to find at home sufficient reinforcements to

seriously check the advance of the British and French. It is not alone, however, from these directions that we have received good news since last writing. There has been a brilliant victory obtained in the neighbourhood of the Tigris, and it looks as if Bagdad lay open to us. The Italians are, likewise, employing a large force of Austrians and Germans. But, perhaps, not the least important news of the week comes from the Balkans. First we had a remonstrance from all the leading men of the Russian Duma addressed to the Bulgarian people and reminding them of how much they owe to Russia. Next came Sir E. Grey's warning in the House of Commons. Now we have a practical demand on the part of the Greek Government to the Bulgarian to demobilise. Clearly, therefore, the Balkan question must be settled very soon. Either Bulgaria must defy Greece, or M. Venizelos, who seems to have won the acquiescence of the King and the support of even his political opponents, must take measures which will bring to a final decision the action of the Bulgarian Government. A little while ago, when the Russians were retreating and the Germans seemed to be carrying everything before them, while the French and British in the West were sitting idle, it was easy to understand that King Ferdinand hoped that he might succeed in the course he had adopted. But now that the Germans have been pushed so hard in France and Belgium, that their armies in Russia are being weakened, and that Russia is not only sure of plentiful supplies of all kinds from her Allies and from the United States, but is as full of courage and determination as ever, it will be strange indeed if King Ferdinand finds Bulgarian leaders fools enough to follow him in a course that must end in disaster to the country.

OUR SUCCESSES IN FRANCE AND FLANDERS.

The brilliant successes of our gallant French Allies and of our own splendid troops, which began at the end of last week, notify to all concerned that at last our supply of munitions has increased so much that we are not only in a position to take the offensive and establish a decided superiority over the enemy, but that we are likewise able to supply our Allies. In saying this it is not meant, of course, that there should be any relaxation in our efforts. In this war munitions are indispensable. Whoever has the most powerful guns and the best explosives is sure to win in every encounter. Consequently, it is our first duty to see that our own men and our Allies have not merely enough, but far more than enough of everything that will enable them to beat down the arrogant and unprovoked foe. In this Journal we have been arguing from the beginning that while in war, as well as in peace, the real strength and wealth of a country reside in its manhood, yet that manhood cannot assert itself at its best unless it is provided with everything necessary for the work upon which it is engaged. There ought, therefore, to be no pause and no relaxation. We ought to do everything that is necessary. For the first of all the duties incumbent upon us is to spare as far as we can the lives and the health of our gallant soldiery. Happily, the lesson has at last been taken to heart, though we are sorry to say there is still too much scolding and too great an inclination to throw upon others the blame of what was, in fact, the ignorance and miscalculation of our Government. However, let bygones be bygones. Let us exert ourselves to the utmost now to turn out sufficient munitions for every portion of the great field over which operations are being conducted, and let us not forget that our very wealth and strength lay the obligation upon us to supply all our Allies, great and small, with what they may need. We shall do well not to forget that war is proverbially liable to extraordinary changes. It is said that already reinforcements are being dispatched from the Eastern field to the Western, and, therefore, it is possible that the enemy may mass a large body of men at some particular spot and attempt to take either us or our French Allies at a disadvantage. We must not, then, be too much disappointed even if we do not score a victory every day and wherever we attack. We must remember that the field of operations is very extensive, that it is impossible to keep enough of men at every point, and that, therefore, the enemy may take us by surprise in some position.

Frankly, the writer, though saying this, has no such opinion either of the strategical or the tactical ability of the German leaders as would induce him to look with apprehension upon their very worst or best endeavours, whatever you like to call them. They have blundered from beginning to end. Indeed, the War would now be nearing its termination if our own Government and the Allied Governments had realised what modern warfare is and had provided accordingly. If it be true that the Guards, or at least a portion of the Guards, are being transferred from Russia or Poland to France or Belgium, the Germans are again committing the same kind of mistake they have so often committed in this War. Their engineers had sufficient knowledge of what a great war would be likely to be, and they constructed strategic railways on an extraordinary scale, with the result that they have been able to send reinforcements from West to East and from East to West with remarkable expedition and very often. They are now repeating the same course, and we have every reason to be gratified, for every man withdrawn from the Eastern field of operations gives breathing time to our Russian ally. Our readers know that we of this Journal have never felt disappointment because the Russian armies had to retreat so persistently before the better armed invader. We held then, and we hold now, that as soon as Russia is fully provided with the requisite munitions she will make her foe understand the folly he committed in pushing so far into her territory. But though the manufacture of munitions is going on so satisfactorily, Russia is not yet in a position to take a really successful offensive. Therefore, it is matter for great congratulation that we have been able to compel the enemy to send reinforcements back from the Eastern field. It is surprising the ignorance and want of foresight that have been shown by the German Government and the German General Staff from the beginning of operations. They started with the notion that they could break through Belgium without serious trouble, overrun France and capture Paris, and that having accomplished so much they could then, at their leisure, throw the whole force of the two Central European Empires upon Russia. They made the attempt. They were stopped at the Marne and driven back gradually to the lines they now occupy. Yet they held on like grim death, and, instead of recognising their failure and throwing their whole force upon Russia before she was prepared, they wasted the whole winter and spring before they seriously attacked Russia. Indeed, they did not bring an adequate force against Russia until the summer was drawing towards a close. Now, when they have forced the Russians out of Poland and have made their entrance even into Russia proper, they are weakening their forces in Russia and augmenting those in France and Belgium. If their very enemies were given the choice in the matter, they could hardly select a course more suitable to themselves.

Meantime an official notice has appeared this week confirming the statement that Japan had undertaken to supply Russia with a very large quantity of munitions. We called attention to the report in our last issue, and we have great pleasure now in finding it confirmed, and confirmed with this gratifying addition, that not only has Japan undertaken to supply Russia with an immense quantity of munitions of all kinds, but that so earnest is she in the work that

she is enlarging her own naval and military factories used for supplying herself. The financial arrangements attending this have been settled, and we may hope confidently that before long Russia will be as well provided as the Western Allies. The increase in our own manufacture of munitions is so gratifying that we may hope that we can send large quantities also to the help of Russia. And, of course, our readers are aware that Russia is buying immense quantities in the United States. We have now entered upon the month of October when, no doubt, the rains as usual will be very heavy and will make the movement of great guns difficult. In a very short time, then, we may expect the winter, so that it is probable that the Germans in Russia will be able to do exceedingly little more this year. It may be objected that this very consideration answers what we have said above about the incompetence of the German Great General Staff. But it does not seem to us anything like an answer. Everybody, since the great Napoleon's disastrous failure, was aware of what an invading army would have to expect in the closing months of a year in Russia. The General Staff must have known all the facts as well as the ordinary reader, to say the least. And, therefore, it was their bounden duty to make such arrangements as would not place them in danger of what overtook Napoleon. Clearly, they did not bear the facts properly in mind; or they are so entirely incompetent that they did not know how to adopt a better plan; or, finally, the military experts have been overruled by the Kaiser. Whatever the explanation may be, those who have the final determining voice have from the beginning shown the most utter incapacity.

Even if the German Great General Staff had proved itself to be as able as it was supposed to be by its numerous admirers abroad, and especially in this country, we doubt exceedingly whether Germany could have escaped disaster. She might, it is true, have overrun France. Indeed, considering that she chose her own time and her own pretext she ought to have been able to reach Paris before serious resistance could be offered to her. But in the long run the defeat of Germany was as certain as anything humanly speaking can be said to be so. The British Empire alone, let us never forget, contains over 400 millions of souls, that is to say, roughly between one-fifth and one-fourth of the whole population of the earth. Then Russia is credited with something between 150 and 170 millions. And to these figures have to be added France, Italy, Serbia, Japan, and Belgium. Practically, that is to say, the two Central European Empires challenged Powers who could, without serious inconvenience, put in the field between three and four times the number of men that they could raise. Unless, therefore, the *Entente* Allies were struck with idiocy there could be but one result. Nevertheless, we must not forget that the *Entente* Powers were none of them prepared, while Germany and Austria-Hungary had been preparing for half a century. Therefore, there was some method in the madness of our enemies; but it was madness all the same. For all that we must not take it for granted that everything now will turn out just as would suit ourselves. We ought, on the contrary, or at all events our Government, our Generals, and our General Staffs, to assume that the enemy will do everything humanly possible, that he will raise even yet fresh reinforcements, and that he will prefer to die with his back to the wall rather than confess that he is utterly defeated. That is the spirit which will enable us to carry the War to a successful ending. But while we must be prepared for desperate action by desperate men we must never for a moment lose sight of our own vast superiority. Nor must we for a moment hesitate to use that vast superiority with such effect that we shall disable the enemy from entering upon a war of revenge for at least [illegible] generations.

Financial Notes.

AT the Convention of the Edison Companies at Spring Lake, New Jersey, on the 16th ult., Mr. Frank A. Vanderlip, President of the National City Bank of New York, spoke at some length upon the prospects of the American Money market. He said: "Do not be deceived by the present banking situation. Do not let low rates for bank loans lead you into any belief that the destruction of capital in Europe will not have its effect upon the price of investment capital in America. It is true that we see the lowest bank rates that we have known for years, and that there are the greatest surplus reserves that our banks have ever held, but there is an essential, fundamental difference between bank funds and investment funds. The great fund of money in the banks is not capital owned by the bankers that they may invest at will. It is a fund held by the bankers subject to the order of their depositors, and must be invested in the main by the bankers in such manner that they can get it back [illegible]

He went on to observe that bankers find it difficult at present to invest their idle funds. But he urged that the present low rates do not controvert the statement that investment funds promise to be increasingly difficult to obtain as long as the destruction of wealth and the prodigious borrowing by Governments goes on. He pointed out that the present plethora of money in the United States is the result

of bad trade. It is largely the consequence of the War in Europe. It is due, moreover, to the fact that the country has not yet accustomed itself to the new banking law. And it is, likewise, caused in some measure by the new banking law, which greatly reduced the reserves which the banks were bound to keep formerly, and by letting loose that portion of the old reserve, has made money appear much more plentiful in the United States than it really is.

The main argument upon which Mr. Vanderlip depended is the right and the true one, that the present plethora is due to indecision and apprehension; but that the waste of wealth by all the belligerents is on so prodigious a scale that it must make money scarce and dear all the world over. It is never to be lost sight of that London, Paris, and Berlin have been for a considerable time now great lenders of capital. They have advanced prodigious sums to the newer and more backward countries. Now Berlin is shut off from the rest of the world, while London and Paris find it as much as they can do to raise the funds required at home for themselves and their Allies. But the world's need for borrowed capital does not end simply because it is not convenient to either London or Paris or Berlin to give the funds. The needs are there, and every day that passes will increase them.

Meanwhile New York is changing its position. Heretofore the United States was a borrowing country. Remember that the whole population of the United States is, in round figures, only 100 millions; whereas the country is capable of supporting five or six times as many. The need, therefore, for opening up the country will continue. Towns will have to be built, houses will have to be erected on an immense scale. Railways will have to be improved in numerous ways. The trade of the country will expand, and with the expansion there will be need for further capital. Just while this is becoming apparent to all the world the United States is called upon to take upon itself the character of a lender of money to nations less well provided than itself. For example, to regulate the New York exchange upon London and Paris, we are glad to say that an agreement has been arrived at by which a body of bankers, headed by the Messrs. Morgan and Company, have pledged themselves to lend 100 millions sterling to England and France.

Is it possible that the United States can lend so large a sum, can provide itself with all its own requirements, and can meet the demands of neighbours like Canada and South America without a great rise in the value of money? One wonders, indeed, that money has remained so plentiful and cheap. Of course, the explanation is that hitherto the War has been dragged out so much longer than ordinary people expected that there has been uncertainty as to its probable result. People hoped that when three great Powers like the British Empire, Russia, and France entered into a struggle of the kind they would very quickly have vanquished the enemy, not bearing in mind that the enemy was prepared while the others were unprepared. The bulk of the American people have not realised the conditions in Europe. They have been puzzled by the practical immobility of the British and French Armies throughout the summer. And they had begun to doubt whether after all the Central European Powers might not win.

There is another circumstance which must not be overlooked. And it is that the relations between the United States and Germany are by no means pleasant. Germany has carried on the War in such a manner that she has committed acts which a less patient man than President Wilson would probably have resented before now. Therefore, the American people have never been able to rid themselves of the apprehension that Germany might in the end do something which may make it impossible to maintain peace between the two countries. This feeling continues, and is likely to continue. And, therefore, it not only has checked enterprise, but to all intents and purposes it has prevented speculation.

We need not refer to the condition of Mexico. Everybody will have that in his mind. And generally the condition of Brazil also is unsatisfactory. But the main reason of all is the continuance of the War, the waste of life and of wealth, the apprehension that the United States, with all its desire for peace, may be drawn into the struggle; and not less than all, the presence in the United States of an immense proportion of citizens who have been either born in Germany or else are of German descent, who, therefore, sympathise very naturally and very strongly with the Fatherland, and who in case of war between the two countries, might prove to be an inconvenience if not a danger.

Considering all the circumstances, there is nothing in the least surprising in the fact that money is both plentiful and cheap. But it is equally certain, as Mr. Vanderlip points out, that money must become both scarce and dear as soon as anything happens which will either involve the United States in the War, or will show that fortune has ultimately declared itself in favour of the *Entente* Allies. For, in either case, Americans will see their way clearly. Everybody will recognise either that America will need all the money she can dispose of, or else that the *Entente* Allies can be backed because they are sure to win. In the latter case speculation is almost certain to revive. And the very instant that speculation begins there will be a rapid advance in the value of money.

COAL AND STEEL.

In the Scottish coal trade export trade is less than the normal at this period of the year. Tonnage is scarce and freights are high. The rise in freights affects particularly the Mediterranean trade, as owing to the wholesale commandeering of its shipping by Greece our shipowners are scared into a feeling that there will be a still further shortage. The Licensing Committee has placed no general embargo on exports from British coal districts recently, though individual firms are sometimes refused licences for reasons which have nothing to do with the course of trade, but are intimately related to the War. Sweden is still a prohibited area, and is likely to remain so, in the circumstances. On the whole, therefore, while not merely "marking time," the Scottish coal trade is not in a flourishing condition, and the demand from abroad is decidedly not equal to the supplies on hand. That raises a question referred to more than once in these notes—the probable effect of the restricted demand on the outlook of the miner. While the Scottish Coal Conciliation Board, which was to have been disbanded at the end of this month, has been continued for a further period, a new wages agreement is ripe for settlement very soon. The state of the market and the stocks on hand are bound to have an influence on the negotiations.

Owing to the heavy Governmental demands on steel and iron works, whose resources are fully occupied in meeting them, and freight difficulties, though there have been a number of important inquiries addressed to Scottish makers, mainly from India, South Africa, New Zealand and Japan, the orders have had to be refused. Some of the inquiries have been referred to English firms, though there is little hope of the demands being met in England either. In fact, Scottish makers are so gorged with Governmental orders that they have had to insist on a proportion being undertaken in England. Ship-plates are nominally priced at 10 guineas and angles slightly higher.

AMERICA'S WEALTH.

No one could witness the expansion in the wealth of nations and the increase in the well-being of nearly the whole of mankind during the past century without experiencing a sense of exhilaration and a feeling of pleasure that modern conditions of life had rendered possible such wonderful progress, but no one, whatever may be his nationality, can mark the present destruction of life and of wealth without becoming conscious of a sense of depression, mingled with feelings of anger against the few men who caused this great War, and who by so doing have so grievously injured not only their own countries but all the nations of the world.

When one realises that no nation can become wealthy without bringing advantage to all other nations, and that no nation can suffer misfortune without other nations being injured, one appreciates the retarding effect which this great War must have upon the universal progress which previously had been so noteworthy. It is indeed fortunate for the future well-being of the world in general and of Europe in particular that the destruction of wealth is practically confined to Europe, and that the countries of the New World are continuing to expand their wealth and their productions, so that, while the net growth of wealth throughout the world has greatly diminished, it has not altogether disappeared. Indeed, when one recollects that the destruction of wealth by the War consists mainly of what would have been the new savings of the belligerent nations, one realises that the wealth of the whole world is still showing considerable expansion in spite of the War, and that when the War is over the increased wealth of the New World should bring substantial advantage to the countries now at war, and should greatly assist them to repair the ravages of and to make good the losses caused by war.

In recent times the world's wealth has grown at a rate of over £3,000,000,000 a year, and this growth has brought advantage to practically everyone in all countries, as it has permitted a vast expansion in production to take place, and has placed at the service of everyone a rapidly increasing volume of agricultural, mining, and manufactured products. No one who gives a moment's thought to the matter can fail to be impressed by the wonderful influence for good upon the world's welfare exercised by the expansion of the United States in population, in wealth, and in productive power. Indeed, in no small measure has the expansion in the consuming power of Europe resulted from the immense growth in America's producing and, therefore, in her purchasing power. Each year the amount of American goods sent to Europe and to other countries for consumption has grown in volume and in value, until in the past twelve months to the end of August the value of the goods exported from the United States has reached the great total of $3,034,000,000, or over £600,000,000, a greater export trade than ever previously attained either by the United States or by any other country. The highest total attained by British exports was in the twelve months to March 1914, when the value reached about £530,000,000. But for the vast quantity of produce which America had available for sale in the past twelve months after supplying her own needs the supply of food in Europe would indeed have been small. And, as everyone knows, the whole world depends for its clothing mainly upon America's production of raw cotton. Moreover, it is evident that, with Europe's power of production seriously curtailed at the present time, the world will depend in a still greater measure in the coming twelve months upon America's productions of manufactured goods, as well as of food and raw material. In measuring the influence for good upon the world's welfare of the growth of capital and of production in the United States, it is essential to recollect that America in normal times receives mainly from Europe poor people to the number of about 700,000 a year, and in a very short time enables them to attain to a relatively high standard of comfort and to accumulate for themselves large amounts of wealth. At the present time the productions of America are enough not only to maintain in a high state of comfort and of well-being its own great population of 100,000,000, but are sufficient to send abroad, as we have said, over £600,000,000 of goods in a single twelve months for the consumption of the rest of the world. No official figures are available as to the amount of wealth produced annually by the people of the United States, but from the data available it is evident that the income of the American people is now not very far short of £7,000,000,000 per annum, of which nearly £2,000,000,000 consists of agricultural products, £500,000,000 of minerals, and £2,000,000,000 of manufactured goods, after deducting the cost of material used. This is equal to an annual income per head of population of nearly £70, against an average annual income of the British people of £52, and against a much smaller average income per head of the other nations of Europe. Out of this great income of some £7,000,000,000 a year the American people devote about one-fifth, or £1,400,000,000 a year, to capital purposes. Indeed, the annual growth in the wealth of the nation is at a rate still more rapid [illegible] due to natural causes and to immigration in ordinary times of about 1,600,000 a year is bringing about

a marked appreciation in the value of land. There has recently been issued by the Department of Commerce an official valuation of the national wealth of the United States, and this valuation discloses that in 1912 the wealth of America was close to $188,000,000,000, or about £39,000,000,000. A similar valuation in 1900 disclosed that the estimated wealth was then no more than $88,000,000,000, or about £18,000,000,000, so that in a period of twelve years the wealth of the American people has expanded nearly $100,000,000,000, or £21,000,000,000. Including the increment in the value of land that has occurred, the growth of American wealth in the 12 years averaged £1,700,000,000 a year. If, however, the increment in values be excluded, and account be taken merely of new money expended, it is evident that for the 12 years the American people have on the average saved some $70,000,000,000, or an average of about $6,000,000,000 a year, or £1,200,000,000. If it be remembered that the savings increase from year to year with the expansion in production, it is evident that the current rate of saving in the States is not less than £1,400,000,000 a year. The details of the wealth indicate the purposes upon which these great sums of money have been expended in the 12 years. A great deal of the money was, of course, expended upon houses, business premises, and factories needed to take care of an increase of nearly 20,000,000, or 25%, in population, and a further very large sum was expended upon house construction, factories, and farms in consequence of the expansion in the well-being of the whole community. The increase in the value of real property and improvements during the 12 years was no less than $58,000,000,000, of which probably about one-half was due to increment. On the average new capital amounting to $600,000,000, or £120,000,000 per annum, has been provided for the construction, improvement, and equipment of railroads. Rather less than one-half of this amount has been spent upon street railways. About $300,000,000 a year has also been expended on manufacturing machinery, tools, and equipment. This sum is over and above the amounts expended upon the erection of factories, the value of which is included in real property. Approximately the capital available for purposes other than the erection of buildings has been about £700,000,000 a year on the average. The greatness of the increase in the wealth of the United States between 1900 and 1912 will be still more evident to the reader from the following contrast:—

At the present time this information is of special value. In consequence of the War, immigration into the United States has practically ceased, and the capital which the country usually accumulates for the purpose of providing for about 700,000 newcomers per annum is available for other purposes. In the first eight months of the current year the exports of the United States have exceeded the imports by $1,100,000,000, and for the whole of the current calendar year it is not improbable that the excess will amount to nearly $2,000,000,000, as normally at this time of the year the exports from the United States are very heavy. We shall probably not be very far wrong if we calculate that the excess of exports over imports in the current calendar year, after meeting America's obligations for interest and services, will be not very far short of $1,500,000,000, or £300,000,000, and it is evident that even this great excess of exports over imports does not fully reflect the power of the United States to supply other nations with capital now that immigration into the country has practically stopped. It is, of course, unnecessary to point out that the new loan of £100,000,000 to Great Britain and France will materially assist in maintaining and increasing the volume of America's exports in the next few months. If the American people continue to be willing to take securities in payment for their goods at a time when foreign nations are unable to pay by any other method, we should not be surprised if next year the excess of exports over imports considerably exceeded £400,000,000, and the amount of capital invested abroad were in the neighbourhood of £400,000,000. If these expectations are realised, the growth of American wealth, including the holdings of foreign securities, may even in this time of war, when immigration is so small, be nearly as great as usual.

The great value of America's exports and the excess of exports over imports are shown by the following comparison:—

The United States probably need to send abroad at the present time about $400,000,000 a year for interest, services, and gifts. Moreover, in the later months of 1914 they had to remit a substantial sum to cover the tourist expenditures of the summer of 1914. In the past twelve months the United States have probably bought back securities from Europe and made fresh investments in neighbouring and other countries amounting to about $800,000,000, or £160,000,000.

NORFOLK AND WESTERN RAILWAY.

TAKING all things into consideration, the results of the Norfolk and Western Railway for the year to June last were highly satisfactory, and, as far as one can gauge the outlook for the current year, the Company has entered upon a period of unexampled prosperity. It is no exaggeration to say that the growth of business and of earnings of the Norfolk in the past has exceeded even the most optimistic expectations, and inasmuch as the traffic has all the time been handled with really wonderful economy, profits have shown steady progress. The prosperity of the Norfolk has come in the main from a great increase in bituminous coal traffic, coal representing over 71% of last year's tonnage. Ten years ago the quantity of bituminous coal conveyed was under 8,200,000 tons, and in the past year the quantity has been nearly 23,300,000 tons, an expansion in the period of no less than 185%. The development of the immense coal deposits of the United States reads like a fairy story. Only 30 years ago the output of bituminous coal was under 64,000,000 tons, whereas for 1914 it reached 423,000,000 tons. This latter figure, we would add, compares with 478,000,000 tons for 1913, the shrinkage last year having been due to abnormal causes, such as strikes, &c., and the acute depression in the iron and steel trades that existed for a time after the outbreak of war. When one takes into account the bituminous coal production of West Virginia, Virginia, and Kentucky, all of which are served by the lines of the Norfolk and Western, the growth is seen to be even more rapid. In 1885 the production of these three States was only 5,275,000 tons. By 1895 the output had risen to 14,388,000 tons, and by 1905 to 45,088,000 tons. For 1914 we have not the exact figures at hand, but we understand the production was at least 100,000,000 tons. With an expansion in the bituminous coal production of the territory served exceeding 100% during each decade, it is little wonder the business of the Norfolk has reached a considerable magnitude, and it will be appreciated that only by the utmost skill of the officers and the adoption of every device tending to economical operation has the Company been enabled to cope with the immense amount of traffic it has been called upon to convey.

The past year has been one of mixed conditions for the Norfolk, abnormal depression in the iron and steel, and therefore in the coal, industries, which occurred in the earlier months of the period, having been followed by almost unprecedented activity. Before the War the iron and steel industries were suffering from a setback in trade, and for the first few months after hostilities commenced the decline in business became accentuated. Indeed, it was not until the spring of this year that immense orders for war materials began to pour into the United States and the condition of the iron and steel industries began to show signs of rapid recovery. The demand for bituminous coal as a result of the lethargy of the steel business fell off so considerably that few of the mines in the territory served by the Norfolk were operated between November and April, but with the receipt of heavy war orders and a large export demand for coal, a general revival occurred, and at the present time the mines are enjoying a busier period than ever before. Some idea of the fluctuations in the coal business in the past year is apparent from the revenues of the Norfolk, for wheras in August 1914 gross earnings were only a few thousand dollars less than ever before recorded for any month, in February they were lower than since January 1912, while by June they had risen so considerably that they far exceeded the figures of any previous month.

It is not surprising, in these circumstances, that for the past year the gross receipts declined $1,248,000, but by means of a saving of $1,888,000 in operating expenses there was a gain of $640,000 in net earnings. Miscellaneous income was, however, $234,000 lower, and additional taxes and higher interest charges called for an extra $458,000. The net result was that the profit available for dividend was only $52,000 less than for the previous year, certainly a satisfactory showing having regard to the conditions that existed last year in those industries whose prosperity is of prime importance to the Norfolk. The balance for the Common last year was $9,490,000, a sum equal to 8.79% on the stock, against 9.15% earned for 1913-14. The difference in the rate of profit earned is due in the main to the amount of Common having been increased during the year by exchange of Convertible Bonds into stock. After paying, for the fourth consecutive year, a dividend of 6%, calling for $6,477,000, over $3,000,000 was available for capital and other purposes. The immense growth in the earnings and profits of the Norfolk in the past decade, and the large margin in excess of dividend requirements, will be evident from the appended income statement. In view of the new method of compiling the accounts last year we have adjusted the data for previous years in order to afford accurate comparison.

The ability of the officers to effect savings in operating expenses is a noteworthy achievement, especially taking into account the very considerable advance in wages in recent years. More money than ever before was expended last year upon maintenance of way, the gain of $740,000 in expenses on this item being due, as to $643,000, to the setting up of depreciation accounts on the larger structures. The use of these depreciation accounts in connection with the roadway and structures is at present optional with the carriers,

but the Norfolk is among the few companies which are availing themselves of the permission to set up such accounts and is doing so on a somewhat liberal basis. The creation of these accounts tends to strengthen the financial position of the road, and as the years pass and the allocations for these purposes increase the effect upon the capital account should be appreciable. As regards equipment, the expenditures for maintenance exceeded those of any previous year, except 1913-14, when such outlays were abnormally high. In the aggregate no less than 32.44% of last year's gross receipts was devoted to maintenance, against the previous highest proportion of 31.83% in 1913-14. The most satisfactory feature of the expense account last year was the considerable reduction in the cost of conducting transportation, the ratio to gross receipts having been brought down to 30.46%, which is not only 2.7 points less than for 1913-14, but is the lowest ratio since 1909-10. How last year's expenditures compare with those for previous periods will be evident from the following statements:—

The physical condition of the road has always been strong, but as each year passes it is becoming still stronger, and this factor is chiefly responsible for the ability of the officers to handle the traffic with increasing economy. Considerable attention has been devoted to strengthening the road-bed and bridges, and a great amount of work has been performed in laying down heavier types of rail. As recently as 1910 the standard weight of rail was 85 lb. per yard, but now the standard rail is 100 lb. About 70 miles of rail of this heavier weight replaced a similar length of lighter rail taken up last year, making a total of 346 miles of 100-lb. rail laid. The capacity of the rolling-stock has also been increased, more particularly freight locomotives, the average tractive of which at the end of June last was 43,657 lb., against 41,407 lb. at June 30, 1914, and 30,047 lb. ten years ago, an increase of 5% for the year and of 44% for the decade.

The result of improvements effected in the condition of the property has enabled the weight of the freight trains to be increased, and thus has curtailed freight-train mileage, and, notwithstanding the immense strides made in this direction in past years, the average load of the freight trains last year increased 5% to as much as 841½ tons. Only 10 years ago the load was 531½ tons, so that the addition in the interval has been about 60%, an expansion of as much as 109% in the amount of business handled—tons carried one mile—having been accompanied by an increase of only 32% in the freight-train mileage. The growing economy with which the traffic has been dealt with in recent years will be evident from the subjoined statement:—

Freight-Train Results, Norfolk and Western Ry.

The average train load secured last year by no means represents the maximum effort that can be put forward, and as new high-capacity equipment and more powerful engines are brought into operation, it would not be surprising if in a short time the average load is raised to 1,000 tons. Although this figure may not be attained in the current year, a distinct improvement in loading is looked for, with resultant saving in conducting transportation, especially as considerable further economies will be rendered possible by the completion of the scheme of electrification of that section of the main line between Bluefield and Vivian, W.Va. Although only about 30 miles of road have been electrified, it is upon this section that practically the whole of the immense coal business of the Norfolk originates, and therefore any economies that can be introduced there will have an important bearing upon expenses as a whole. The Norfolk and Western is the first great American railway to introduce electrification for the sole purpose of increasing trackage capacity and effecting economies of operation, and railwaymen the world over will follow with close interest the results of the installation. Indeed, it is possible that subsequently electric traction may be more extensively adopted on the Norfolk. The power plant and line work on the 30 miles are finished, and eight of the twelve powerful electric freight locomotives contracted for are in service. In the report just published the President states that the traffic results already obtained from this work indicate that the capacity of the line has been doubled, and that the operating cost per ton per mile will be materially reduced.

At the present time, by reason of the War, the iron and steel industries of the United States are more busily engaged than ever before, and not only are the various plants operating at full capacity, but unfilled orders are of considerable magnitude, and the demand for iron and steel products for domestic purposes is again becoming an important factor. Further, the crops of this year are very considerable. It will thus be realised that in the current

fiscal year the traffic of the Norfolk and Western will assume great dimensions, especially as, beyond large home requirements for bituminous coal, there is also a considerable demand for export purposes. A good start was made in the first month of the year, the gain in the gross earnings for July having been $718,000, or 19%, and in the net earnings after taxes as much as $594,000, or 54%. The small increase in expenses arose entirely from larger appropriations for maintenance of way and higher taxes. The gain in net profit for the month was $554,000. Interest charges this year are expected to be no higher than for 1914-15, and therefore almost the whole gain in net earnings may represent additional net profit. It is, of course, too soon to foretell what will be the profits of the current year, but, having regard to all the circumstances, it would not be surprising if they equal between 11% and 12% on the stock.

As in the case of the physical side of the property, the financial position is excelled, indeed is equalled, by few railway undertakings. Besides holding on June 30 last $7,382,000 of cash, including $1,000,000 of time drafts and deposits, against which there were outstanding working liabilities of $6,102,000, $9,671,000 was invested in short-term securities. Of course, this money will not permit of much new construction work being undertaken, but beyond actual cash resources in the Company's treasury on has to bear in mind that the credit of the undertaking renders possible the borrowing of additional sums as they are needed, for it is obvious that to provide for future growth of traffic capital expenditures must continue. The Company has no short-term notes outstanding. Its bonds are exceedingly well secured, the interest and other charges last year calling for only 32% of the net income, and this year the proportion should be still lower. A factor contributing to the financial strength of the undertaking has been the conservative distribution of the profits. For the last ten years the net profit available for dividend on the Common stock has aggregated about $75,000,000, of which only $41,000,000 has been paid in dividends, the balance of nearly $34,000,000 having been available for various capital purposes.

The prices of and yields afforded by the Company's securities are set out below:—

MISSOURI, KANSAS AND TEXAS RAILWAY.

SOMEWHAT unexpectedly the Missouri, Kansas and Texas Railway has this week passed into the hands of a Receiver, but inasmuch as the gentleman appointed to this post is Mr. Schaff, who for some years has been President of the undertaking, the Receivership is regarded as of a friendly character and merely in order to make the necessary reorganisation of the capital. The present trouble arises in no way from inability to pay interest charges, for judging from the results for the twelve months to July last interest charges are more than covered. So far as can be gauged there was a surplus profit for the period of about $1,250,000, equal to the full 4% dividend on the Preferred stock and to at least 1% on the Common stock. It is certainly somewhat unusual for a Receiver to be appointed to an undertaking earning profits such as here indicated. The reason for the adoption of the present course arises from the position of the capital account. Some months ago $19,000,000 of 5% Notes fell due, and only after considerable difficulty were they renewed for a further twelve months to May next on a 6% basis. At the time the notes were renewed a small committee of directors was appointed to formulate a plan for readjusting the capital account and for raising the requisite funds to retire the extended notes and to provide a further sum of about $8,000,000 with which to pay off bankers' loans and to meet certain capital expenditures.

It is impossible at the moment to say whether the appointment of a Receiver arises from the failure of the committee to agree upon a workable arrangement or whether it is part of the plan of readjustment. It has long been recognised that the Company's interest charges absorb an undue proportion of the net income and that some scheme of readjustment was essential to reduce interest charges. Further, the amount of Common stock is very large in proportion to the size of the undertaking, and, although the outlook is for larger traffic, revenues, and profits in coming years, the day could not be foreseen when the Company could distribute such dividends on the stock as would permit of the raising of new capital by the issue of Common stock. For no undertaking can be considered financially strong unless able to make stock issues, and it is hoped that as a result of the Receivership, which is anticipated to be of short duration, there will emerge a new and financially sounder "Katey" whose interest charges will be less than those of the existing undertaking and whose ability to earn high rates of dividend on the then outstanding Common stock will be greater than hitherto.

Whether beyond a scaling down of the capital account an assessment will be decided upon, and, if so, what the amount of assessment will be, we cannot venture to predict, but if the proprietors have to put their hands in their pockets it is highly probable that for every dollar paid up full value will be received in new securities. Although at the moment gross earnings are showing a falling off, a decided change for the better is looked for shortly, when the bumper corn crops come forward in the States served. To some extent recent shrinkages in earnings have resulted from smaller shipments of winter wheat, this crop in the territory served having been considerably below last year's level, but the loss in this direction is expected to be more than made good by the largeness of the corn crop. Comparison of this year's estimated corn crop and wheat crop in the States served, with those for 1914 and with the average for the five years 1909-13, is appended:—

	Miles Operated	Corn Crop— 1915* Million Bushels	1914 Million Bushels	5-Yr. Aver. 1909-13 Million Bushels	Winter Wheat Crop— 1915* Million Bushels	1914 Million Bushels	5-Yr. Aver. 1909-13 Million Bushels
		"Katey"

		658.5	441.4	526.3	212.6	284.7	130.8

* Preliminary estimate.

The 4% First Mortgage bonds are now quoted in London at 80½, the 4% Second Mortgage bonds at about 53, and the 4½% General Mortgage bonds at 58. The Preferred stock stands at about 12, and the Common at 5¾.

ATLAS ASSURANCE CO.—Interim dividend of 3*s.* per share, less tax.

NEW ENGLAND BREWERIES CO.—Interim dividend of 1½% on Ordinary.

DARRAGH (A.) AND CO.—Dividend at rate of 7½ per annum on Preferred Ordinary.

UNITED RAILWAYS OF THE HAVANA.

THERE can now be no reasonable doubt that the United Railways of the Havana will be in a position to maintain the dividend of 5% on its Ordinary stock in respect of the past year. When we dealt with the position of the Company in our issue of March 27 last the traffic receipts of the line were showing improvement on those of the preceding year; nevertheless, there was at the time a falling off in the aggregate of over £42,000, and a reasoned calculation pointed to the conclusion that for the complete twelvemonth the total gross receipts would probably attain to the level of 1913-14. We pointed out, however, that possibly the improvement in the remaining weeks would be at an accelerated rate, and that conceivably the previous year's excellent results might be exceeded in 1914-15. Such, fortunately, has proved to be the case, and for the 52 weeks to the end of June there was an expansion in earnings of no less than £106,000, or 6.5%. The importance of the gain thus recorded will be appreciated when we state that until the end of January there was a persistent falling off in earnings, and for the 30 weeks to January 23 the decrease amounted to no less than £67,000, so that in the last 22 weeks of the year the increase has been upwards of £173,000. This improvement, moreover, continues, and for the first quarter of the current year a further gain of nearly £60,000 has been recorded. The excellence of the past year's gross results and the marked advance which has taken place since the end of January last will be seen from the following table, showing the course of earnings monthly since July 1912:—

Course of Traffic Receipts since July 1, 1912.

Month	1915-16 £	1914-15 £	1913-14 £	1912-13 £
July	106,600	90,800	94,100	94,200
August	95,300	74,600	80,100	78,800
September	94,500	73,400	77,000	77,560
October		93,000	98,000	96,500
November		81,100	82,700	99,700
December		97,200	116,700	120,500
January		184,400	208,500	157,900
February		200,400	186,800	193,400
March		206,000	203,300	241,300
April		208,000	170,500	197,300
May		253,000	166,500	200,700
June		166,000*	137,600*	107,200*
Total, year	-	1,728,000	1,622,000	1,665,000

* Estimated.

The course of expenditure has yet to be ascertained, but having regard to the fact that for seven months of the year business was slack, and that with the outbreak of war retrenchment of every kind was probably initiated, the relative cost of working in the past twelvemonths may have been sensibly reduced. Assuming, however, that 50% of the growth in earnings has been absorbed by increased expenditure, the net revenue balance for the year would come out some £53,000 larger than in 1913-14. On the other hand, interest and other charges have probably called for an extra £40,000, and the profit for dividend would thus show an increase of £13,000. This would raise the divisible surplus from £466,000 to £479,000, a sum equal to nearly 7½% on the stock. The maintenance of the 5% distribution is, therefore, practically assured.

To show the strength of the various capital issues and the relatively large margin which is likely to have been earned in the past year behind the 5 per cent. dividend on the Ordinary capital we give the following statement:—

Year—	1914-15* £	1913-14 £	1912-13 £	1911-12 £	1910-11 £

The Company is essentially a sugar carrier, although its traffic also consists of a variety of general produce, and its passenger business is of considerable importance. The present position of the Cuban sugar industry is very satisfactory, owing to the European situation, and enormous profits are being made by planters and others from the high prices now ruling. Last season's crop, it is true, was somewhat smaller than that of the previous year; but, as prices were about 100% higher, the profits realised were very large, and the wealth of the country has been greatly augmented. The coming crop, moreover, is expected to exceed all previous records. New plantings are reported to have been made on an extensive scale, and all available land has been utilised for sugar-growing. Unless, therefore, the weather behaves unkindly in the next month or so, a bumper crop is likely to be gathered, and as it will probably be sold at very remunerative prices, the wealth and prosperity of the island will be further greatly enhanced, and the railway companies continue to enjoy a period of unexampled activity. Cuba may not, it is true, always gather large crops, nor will it always obtain the abnormally high prices now ruling; but it is interesting to note that, despite the fluctuating character of the crops, the past record of the United Railways Company has been remarkably good. A retrospect of the main results of working for a decade is given below:—

United Railways of the Havana.

Year	Gross Earnings £	Expenses £	Ratio %	Net Earnings £	Profit for Ordinary £
1914-15*...	1,728,000	1,008,000	58·33	720,000	479,000
1913-14 ...	1,621,864	955,138	58·96	666,746	465,888
1912-13 ...	1,635,250	891,056	54·49	744,194	506,449
1911-12 ...	1,422,098	778,247	54·72	643,851	403,880
1910-11 ...	1,224,775	734,744	59·98	490,031	230,542
1909-10 ...	1,250,204	685,285	54·81	564,915	305,315

* Estimated.

Financially, also, the Company is in a strong position. It has ample capital resources with which further to develop its system when normal conditions again prevail, and its reserve and renewal funds now amount to a fairly respectable total. This, together with the fact that the earnings of the line are progressive, that the outlook for Cuba is bright, and that, consequently, the various subsidiary undertakings in which the Company is interested are likely to earn increased profits, all points to the conclusion that, sooner or later, higher dividends than 5% will be forthcoming. The Ordinary stock is, therefore, distinctly attractive at the present time for those willing to risk a little in order to obtain the high return now forthcoming. At the price of 72½ the yield from

the dividend of 5% is as much as £7 7*s.* 1*d.* per cent. The 5% Cumulative Preference stock at the price of 84½ is a good purchase, having regard to the fact that the dividend is covered nearly four and a-half times, and that it is cumulative. The Debenture issues of the Company are well secured, the total fixed charges representing less than 40% of the past year's estimated net income. The yields range from about £1 16*s.* 7*d.* to £5 11*s.* 11*d.* per cent.

The capital of the Company and the yields afforded by the various securities at the present time will be seen from the table appended:—

BIRMINGHAM SMALL ARMS.

The most recent report of this Birmingham Company covers a period shorter by three weeks than the usual time, inasmuch as early in July last formal notification was received from the Minister of Munitions that the works were placed on the list of controlled establishments as from July 12, 1915. That date being so near the end of the Company's financial year the directors thought it would be more convenient to close the accounts as on July 10, and the balance sheet has accordingly been made up at as that date. It was, of course, known that the Company, being engaged on Government work, would make a satisfactory showing when the accounts were published, and the figures of the profits fully verify the general assumption that the past year would be a prosperous one. The profits have, indeed, increased to such an extent that the shareholders have benefited by a larger dividend. Not only so, but they also secure the advantage of a capitalisation of practically the whole of the reserve fund.

The original object of this Company was the establishment in Birmingham of a factory for the manufacture by machinery of military rifles for the British and foreign Governments. Subsequently there was added the manufacture of cycle component parts, and later on, through the acquisition of another business, the manufacture of cycles was added. In addition, through the purchase from the Government of the Royal Small Arms Factory at Birmingham, the Company took up the manufacture of engineers' small tools and twist drills. The latest addition to the business is that of the manufacture of motor buses, motor cars, motor wagons. The Company dates back originally to 1873, though the business was started in 1861, but it was reorganised in its present form in 1896. In 1902 a further alteration was made in the capital account, and it was decided to distribute a reserve fund amounting to £65,900, together with a sum of £36,575 taken from profits, as a bonus to the Ordinary shareholders in the shape of one new Ordinary share for every two shares held. A further expansion occurred eight years ago, when the business of the Eadie Manufacturing Company was taken over, the Eadie shareholders receiving in exchange for their shares 45,000 fully-paid Ordinary shares of £5 each of the Small Arms Company. In September 1910 another important move was made, perhaps the most important in the history of the Company, when the Birmingham Small Arms Company took over the important business of the Daimler Motor Company. This took place by means of an exchange of shares, the holders of shares in the Daimler Company receiving, first, for every £1 Preference share the sum of 25*s.* in cash, and, secondly, for every four Ordinary shares five fully-paid Ordinary shares in the Birmingham Small Arms Company. For various reasons the accounts of the Daimler Company were not merged in those of the Birmingham Small Arms Company, but a new Daimler Company was formed, the shares in which are held entirely by the Small Arms Company. The result of the amalgamation was to increase the Ordinary share capital of the Small Arms Company from £517,225 to £766,982, the Preference share capital remaining unchanged at £203,150.

In 1913, in order to provide additional working capital and replace sums amounting to upwards of £150,000 paid in 1910 to shareholders in the Daimler Company, it became necessary to increase the capital, and accordingly 500,000 £1 6% Cumulative "B" Preference shares were created, of which 300,000 were offered for sale in October 1913, at the price of 21*s.* per share. The paid-up capital was thereby brought up to £1,270,132, and at July 10 last this figure was unchanged. A comparison of the balance-sheet figures with those of last year will show that a very large amount has been expended this year on extensions, the item of freehold land and buildings, plant, machinery, &c., rising from £579,184 to £1,049,889. This increase is due mainly to the rifle department to provide the enormously increased output demanded by the Government. This expenditure has been met out of the reserve fund and the balance brought forward at July 31, 1914, amounting altogether to £418,284, consisting of accumulated profits made prior to the War. The directors have had under consideration the desirability of capitalising £383,491, part of this amount, and now recommend that this should be done by the issue to the Ordinary shareholders of 383,491 Ordinary shares of £1 each, fully paid up, to be distributed in the proportion of one new share for every two Ordinary shares now held, the new shares ranking for dividend as from July 10, 1915. When this is carried out the paid-up capital will amount to £1,653,623. Stocks and stores at July 10 last amounted to £352,530, as compared with £235,230, while investments rose from £653,720 to £704,933. In the following table we set out the liabilities and assets of the Company for 1901, the year before the first capitalisation of the reserve took place, and for subsequent years following the acquisition of the Eadie and Daimler businesses, from which the substantial growth in the capital of the Company during recent years may be well seen:—

LIABILITIES.

The profits for the twelve months to July 10, 1915, including rent and income tax, from the Daimler Company, Limited, and other investments, have amounted to £408,455, as compared with £190,429 for the previous year. The amount required for Preference dividend has risen from £19,684 to £25,224, after which there remains a balance of £383,231, which is very nearly sufficient to provide for a distribution of 50% on the paid-up Ordinary capital. The actual distribution has been increased from 15% to 20%, thereby leaving a surplus of £229,835. Of this £133,491 is transferred to the general reserve fund, bringing it up to £483,491, while the balance of £96,344 is added to the carry-forward, bringing it up to £164,628. It may be added that after the portion of the reserve is capitalised the balance remaining at its credit will be £100,000.

We show below how the profits have been distributed since 1909:—

Yr. ended July 31 —	1915	1914	1913	1912	1911	1910	1909
	£	£	£	£	£	£	£

	(20%)	(15%)	(15%)	(15%)	(15%)	(15%)	(10%)
	229,835	55,698	63,309	53,841	108,206	11,627	22,743
Reserve fund ...	133,291	50,000	60,000	50,000	100,000	10,000	—
	96,544	5,698	3,309	3,841	8,206	1,627	22,743
Brought forward	68,284	62,586	59,277	55,436	47,230	45,603	22,860
Carried forward	164,828	68,284	62,586	59,277	55,436	47,230	45,603

It will be realised that the Company has enjoyed an exceptionally prosperous time during the past twelve months, and, in view of the demands that will continue to be made upon the Company for the supply of rifles and other articles required for the purposes of the War, the activity that has now been enjoyed since the outbreak of war will be continued, and there is no doubt that substantial profits will be made. Naturally, however, the Company's results will come within the purview of the Chancellor of the Exchequer, and a large proportion of the excess profits will have to be returned to the National Exchequer. What the exact amount of this sum will be is impossible to say. Presumably, however, the Company will be able to secure allowance for the new capital expenditure necessary to meet Government requirements. By keeping in hand, however, so large a carry-forward the Company has placed itself in such a position that it can regard the whole question with equanimity, and though it may be necessary to set aside a very large sum to meet national requirements, there is no doubt that profits will remain on sufficiently large a scale that the shareholders will be perfectly content with the distribution that is made to them, though it is accompanied by the handing over of a large sum to the nation. There can be little doubt that the results of the current year's trading will be sufficiently large, after providing for the excess war tax, to justify a substantial distribution to the shareholders. At the outbreak of war the £1 Ordinary share could be secured in the neighbourhood of £2. The present price is 59*s.*, so that it will be realised that a substantial gain has occurred. On the basis of a 20% distribution the yield afforded is slightly over 8%, apart from any calculation as to the value of the bonus share distribution. The £1 Second Preference share is quoted at 20*s.* 6*d.*, thereby affording a return of about 5¾%. The £5 Preference share stands at $5\frac{9}{32}$, at which price the yield is nearly $4\frac{3}{4}$%. Doubtless the Company will remain busily employed in all its departments, and the general outlook therefore is of the best possible character, and it is certainly of immense advantage to the nation that such a Company as the Birmingham Small Arms Company should have works so well organised and fitted up that it is able to meet in so satisfactory a fashion the demands of the Government for the various classes of goods and materials that it requires for the successful prosecution of the War. We append a statement of the present capital, prices, and yields afforded:—

Insurance Notes.

SCOTTISH LIFE ASSURANCE COMPANY, LTD.

[illegible] years ago this life office was founded in Edinburgh, one of its founders being Sir David Paulin, who still acts as the Company's Manager. The growth of a life office must necessarily be slow, and instances must be rare in the history of life assurance where the chief official of such an institution during his occupation of the post has seen the assurance fund, begun with the first premium paid, gradually increase to over two millions sterling, as in Sir David's case. It took 25 years to get the first million together, the second was accumulated in less than one-third of that time, and the rate of future progress bids fair to be accelerated. As far as regards bonuses the Company has a fine and consistent record. Six quinquennial divisions of profit have been made, the last following the actuarial investigation as at December 31, 1910, and on each of these occasions the bonuses on participating policies have been in reversionary form at the rate of 40*s.* per cent. per annum for each premium paid during the valuation period, excepting the year of entry in the case of assurances participating for the first time.

Although the progress shown in the development of the Company in 1914 is not so great as in 1913, when the largest new business in the Company's history was reported, yet it exceeds what might have been expected under the unprecedented conditions prevailing in the last five months of the year. The Company gave every facility to its employees to join His Majesty's forces for the duration of the War, full salaries being paid and posts being kept open for their return. The Chairman announced at the annual meeting on February 22 that more than 50 per cent. of the Company's staff, including, with one practically

unavoidable exception, every man in its service between the ages of 18 and 35, had volunteered for service, and although all were not accepted a large proportion were then with the Colours. Many of the Company's working agents throughout Great Britain and Ireland are also at the Front or under training.

New policies for £443,300 were issued by the Company in 1914, of which £23,000 was reassured, leaving as the net retention £420,300, as compared with £521,046 in 1913. The total net life premium income, increased by £3,758, amounted to £208,920, apart from a sum of £9,985 representing consideration for new annuities granted. Expenses of management, inclusive of commission, representing about 15.7% of the premiums, show a slight reduction, which is satisfactory looking to the fact that, although the new business was less than in 1913, which in itself would tend to reduction in the ratio, yet, on the other hand, a considerable amount of unproductive expenditure had to be met in connection with the salaries of members of the staff who had gone on active service.

The incidence of mortality during 1914 was favourable, notwithstanding fatalities in warfare. The claims by death, amounting to £73,632, included £10,000 due to these causes. They represented only 81% of the amount anticipated by the mortality tables employed by the Company, and but for the War the proportion of actual to expected claims would have been as low as 70%. Through the year's operations the life assurance fund was increased by £137,623 to £2,172,973. The average yield on the funds throughout the year, before deduction of income tax, amounting to £4 8*s*. 11*d*. per cent., differed very slightly from the Company's experience in 1913; but after such deduction the net yield showed a diminution of 2*s*. 6*d*. per cent., from £4 5*s*. to £4 2*s*. 6*d*. This indicates, however, a profit of £1 2*s*. 6*d*. per cent. over the valuation rate of 3%, at which it is actuarially assumed that the funds will fructify.

The Company has a small and select accident department. Premiums in this section amounted to £6,594, and, after transference of £1,916 to profit and loss, the relative fund on December 31, 1914, amounted to £6,847, exclusive of sums reserved for outstanding liabilities.

The Company's subscribed capital amounts to £500,000, of which £50,000 is paid up, in shares of £10 with £1 paid on each. The dividend in respect of the operations of 1914 is 10%, free of income tax, as for the previous year. By far the greater part of the dividend is earned from interest on shareholders' funds and the profits of the accident business. It is officially stated that the Company's participating life policyholders receive a larger proportion of life and annuity profits than is the case in any other British proprietary office.

The Company's total assets, according to the balance sheet, amounted on December 31, 1914, to £2,276,660. The Stock Exchange securities were taken at or under the values at which they stood at the last quinquennial valuation for those then held by the Company, and at or under cost price in the case of subsequent investments.

EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LTD.

The annual report of this Company for 1914 is presented in a new form, which seems an improvement. Comment had been made in these columns in former years on the uninforming character of previous reports. From the report for last year it is possible at least to compute the profit from trading, which was not the case with former productions of the kind. The directors explain that the revenue account, profit and loss account and balance sheet for 1914 are in the form in which they are presented to the Board of Trade, but without the voluminous details required by that department.

The Society's main business relates to the descriptions of insurance indicated in its title, and a large amount of the Company's vast employers' liability transactions is written in America. Fire and miscellaneous insurance are also undertaken. The Company has many foreign and colonial branches, and thus its operations are world-wide.

The Company's net premium income in all classes amounted in 1914 to £1,932,177, which exceeds that of the previous year by £197,210. After adjustment of the reserve for unexpired risks, and deduction of claims and expenses of every kind, inclusive of taxes, the trading profit, apart from interest earnings, appears to have amounted to £149,682.

The shareholders' capital amounts to £1,000,000, of which £200,000 is paid up, in shares of £10 with £2 paid on each. The dividend for the year 1914 is declared at the same rate as was announced last year—viz., 16*s*. per share, or 40%, free of income tax. This indicates a splendid return to shareholders, but more than the amount required for its distribution (£80,000) was covered by earnings on the investments. Thus the sum of £81,281 is credited to profit and loss account from these sources. This brings the total profits for the year up to £230,963, and after provision for the full dividend the sum of £150,226 has been added to the general reserve fund (thereafter amounting to £944,525) and £737 to the investment reserve fund (thereafter £67,468).

The total assets as valued in the balance sheet on December 31, 1914, amounted to £2,658,235. The auditors report that a valuation of the investments was made, based upon the prices current on June 30, 1914, and that the balance standing to the credit of the investment reserve fund was more than sufficient to cover the depreciation ascertained on that basis. Apart from capital, investment reserve fund, and provision for dividends and outstanding claims and expenses the reserves are as follows:—

Reserve for unexpired risks...	£772,871
General reserve	944,525
	£1,717,396

This represents about 88.8% of the premium income in 1914, and seems to indicate a fairly strong financial position as compared with liabilities, while the attractions of the Company to policyholders are increased through the second line of security afforded by the large amounts of the paid-up and uncalled capital.

The practice of paying dividends entirely out of interest earnings is to be commended in the present circumstances of this Company, relating to a rapidly progressive business, and under normal circumstances dividends may be expected to keep pace relatively with the enhanced accumulations. After the reserves have reached a certain and considerably higher standard the directors may feel justified in dividing a portion of the trading profits, as well as the interest earnings, and, so far as can be judged from the accounts presented, there would appear to be attractive possibilities to shareholders, beyond estimates based on the very handsome yield on the original holdings at present shown.

PEARSON AND KNOWLES COAL AND IRON COMPANY, LIMITED.

During recent years steps have been taken to extend the business and broaden the basis of this well-known coal and iron Company. First of all, the business of Rylands Brothers, Limited, was absorbed by means of a purchase of shares, thus giving Pearson and Knowles control of the works of what was formerly its largest customer, so safeguarding and developing the trade in wire rods. Subsequently there were acquired the shares of the Moss Hall Coal Company and the Wigan Junction Collieries Company. In 1910 a further step was taken in the way of consolidating and broadening the basis of the business. Originally the Company manufactured iron only, but in order to meet the altered circumstances of the trade

which have taken place in recent years, which have had the important effect that malleable iron has for the purpose been superseded by Bessemer and Siemens steel, it became necessary to adapt the works and machinery to deal with steel in constantly increasing proportions, and as a matter of fact at the present time steel instead of iron is used in the greater part of the Company's finished products. The raw material for this branch of the trade is semi-manufactured steel in billets and blooms, for the supplies of which the Company has been dependent upon other manufacturers. After careful consideration, the directors finally decided to establish works for the production of semi-manufactured steel on the banks of the Ship Canal, in a position where steel can be produced in successful competition with any British or foreign works for the supply of the Lancashire district, in which there is a large and steady market for steel in addition to the Company's own requirements.

The benefit of these works has been experienced during the past year. During the first six months of the year under review the Company's trading was most unsatisfactory. Coal was almost unsaleable. During the greater part of the period the Company was only able to find work for its miners for three days a week. Not only so, but it was burdened with heavy contracts at unremunerative prices, together with an increased cost of production. Similarly, the iron trade was burdened by contracts of a like nature on sales made based on material to be supplied before the War at low prices. These purchases were mainly made from Germany, and when the War intervened the Company was not only denuded of its ordinary supplies, but also when purchasing elsewhere was obliged to pay prices which left the contracts previously made for delivery of the finished articles most unprofitable. Many manufacturers found it necessary to shut down their works, but Pearson and Knowles began immediately to feel the benefit of its investment in the Partington Steel and Iron Company, Limited, from whom it was able to obtain stocks to fill up the void produced by the War with Germany, and, consequently, to continue its business. And, as the Chairman pointed out at the meeting on September 29, the Partington Steel and Iron Company, Limited, "was projected and permitted by the board with the sole object of safeguarding the supplies of war material for the parent Company against the dangerous uncertainty inseparable from dependence upon German importations, and it is a matter of satisfaction to the directors that not only has this object been amply achieved in the present crisis, but the works have served a great national purpose in producing a continuous supply of shell steel for months past for war purposes, first for the French and then for both the French and British armies."

Naturally the profits made by the Company have shown very considerable fluctuations, and since 1900 they have varied between a minimum of £16,010 and a maximum of £142,424. For the twelve months to June 30, 1915, the profit has amounted to £122,359, a figure which has only been surpassed on two previous occasions.

To indicate the manner in which the profits have fluctuated we show below the profits and dividends since 1897:—

Year ended June 30	Profit	Div. Ord.	Year ended June 30	Profit	Div. Ord.
	£	%		£	%
1915... ...	122,359	7½	1905... ...	57,187	4
1914... ..	98,813	5	1904	46,748	3
1913... ...	118,870	8	1903	53,427	4
1912... ..	78,141	5	1902.. .	62,865	6
1911... .	70,978	4	1901...	142,424	12½
1910... ...	66,618	5½	1900. ..	123,044	10
1909... .	61,890	4½	1899... ..	69,042	5
1908... ..	16,010	1¼	1898 .. .	27,454	1½
1907... ...	110,680	10	1897.	38,215	2
1906... ...	62,866	5			

The profit for the past twelve months of £122,359 compares with £98,813 for the previous year. After providing for depreciation and Preference dividend there is a balance of £93,090, as compared with £60,958. The Ordinary dividend is increased from 5% to 7½%, and of the balance of £51,719 a sum of £47,500 is carried to the reserve, and the surplus added to the carry-forward, bringing it up to £26,061.

We indicate the manner in which the profits of the past seven years have been distributed:—

Yr. ended Jn. 30—	1915	1914	1913	1912	1911	1910	1909

Carried forward	26,061	21,842	19,548	13,822	13,359	15,968	14,517

At the meeting the Chairman pointed out that the transfer to reserve is the largest ever made in the history of the Company, and several reasons have induced the directors to transfer so large an amount rather than further increase the dividend. Particularly there is to be faced the great uncertainty which will arise about business at the close of the War, and also freedom has not occurred from the state of confusion "which exists amongst those appointed to regulate our trade matters, and who seem to forget that considerations of finance and exchange require the encouragement of the export trade so far as is possible consistent with war requirements." The expenditure on capital account for the year is £8,254, which has been written off from profits.

To show the extent to which the profits have been drawn upon for depreciation and reserve purposes since 1897 we set out the following:—

Year ended June 30	Written off for Depreciation	To Reserve Fund	Year ended June 30	Written off for Depreciation	To Reserve Fund
	£	£		£	£
1915... ..	8,254	47,500	1905	6,810	10,000
1914... ...	15,819	30,000	1904	4,987	10,000
1913	15,156	30,000	1903 — ...	10,000	5,000
1912... ...	14,528	12,394	1902	5,000	10,000
1911... ...	19,501	15,000	1901	25,000	25,000
1910... ...	18,126	15,000	1900	28,609	20,000

1907... ...	15,756	20,000	1897	10,000	Nil
1906... ...	6,875	10,000			

The issued share capital of the Company is £1,000,000, and the reserve fund amounts to £402,500. The land, buildings, collieries, ironworks, &c., are valued at £744,381. The reserve fund is specially invested, the investments standing in at £388,879. The Company formerly showed in its books colliery leases and goodwill at £315,560, but this has all been written off out of profits. Herewith we set out a summary of the liabilities and assets at June 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital ..	1,000,000	Land, buildings, &c. ...	744,381
Reserve fund	402,500	Reserve fund investment	388,879
Debentures	21,000	Mine rents suspense account	13,657
Loan	215,700	Stock	396,186
Creditors	144,045	Sundry debtors	322,998
Profit and loss	133,694	Cash and bills	80,838
	1,946,939		1,946,939

At the meeting Sir J. S. Harmood Banner, M.P., gave some interesting information as to the position. He pointed out that the trading this year will be affected by the Coal Prices Limitation Bill, and by the pre-War contracts having run off, and as for the past year profits were barely 6*d.* per ton on the output an improvement will be very welcome. Rylands Brothers' works for the first half of the year were affected by pre-War conditions and difficulties in obtaining supplies. These works are now a munition area, and 80% of excess profits are taken by the Exchequer. As regards the outlook, a great deal of the work will arise from employment by the British Government and Allied Governments, and if the profits exceed the basis on which the Company has

paid income tax this year, the Exchequer will take one-half of them, and in the case of Rylands Brothers 80%. But, barring anything unforeseen, the Chairman hopes that the profits for the current year will reach the 1913 basis, when a dividend of 8% was distributed, though he rather warned the shareholders not to expect so large a distribution because of the necessity of improving the reserves. At the present price of 4¾ for the £5 share the yield on a 7½% basis is as much as 8½%. On the Second Preference shares the return is 6¾%, and on the First Preference shares about 6%.

The following table sets out the capital, prices, dividends, and yields afforded:—

Amount	Description	Par	Price	Div.	Yield
£		£	£	%	£ s. d.
250,000	6% Cum. Pref.	5	5⅛	6	5 17 7
140,000	6% Cum. 2nd Pref.	5	5⅛	6	5 14 4
610,000	Ordinary	5	1¼	4	8 10 5

CHILEAN TRADE AND RAILWAYS.

Trade conditions in Chile are steadily improving. Prior to the European war the country was enjoying a fairly high degree of prosperity, but since the outbreak of hostilities business has been very depressed. This is indicated by the trade returns for 1914 recently issued by the United States Consul-General. They show that the total trade of Chile for the year declined by no less than £11,488,000, or over 20%, whilst the surplus of exports over imports fell by as much as £3,057,000 to the relatively small total of £1,970,000. Chile depends very largely upon the export of nitrate, and as Germany and Austria are among the largest consumers of the fertiliser, the outbreak of war practically meant the entire stoppage of work in the nitrate fields. In the last few months, however, there has been a distinct recovery, owing to the increased demand for nitrate for the manufacture of explosives as well as for agricultural purposes in the United States, and the general trade situation to-day is much less depressed than during the latter part of 1914. Representatives of the Chilean Government abroad, principally diplomatic and consular officers, are actively seeking new or wider markets for Chilean products, particularly nitrate, iodine, copper, hides, wool, and wine, and in this way new outlets are expected to be found which will enable the country to get through the present trying period. The price of nitrate has been steadily rising of late, and the quotation is now well over 9*s.* per quintal, so that considerably larger profits are being made both by the Government and those connected with the industry. Already the railway companies are showing signs of recuperation, and recent traffic returns have been a distinct improvement on those of a year ago. In the last seven weeks the Antofagasta Railway has added no less than £61,000 to its gross traffic receipts, and although in the aggregate to date there is a heavy falling-off as compared with a year ago, much of this is likely to be made good by the end of the year. The Taltal Railway is also doing better, and the Nitrate Railways Company, after its severe set-back of the past thirteen months, has now commenced to report increases in earnings. Antofagasta stock is steadily recovering in price, the Ordinary being quoted at 82¾, whilst the Deferred has risen to about 126. The price of Taltal Ordinary which recently dropped to under 4 has now recovered to 5⅛.

Bell's United Asbestos Co.—Interim dividend on Ordinary shares of 1*s.* per share, less tax.

Holdron (H.).—Interim dividend at the rate of 6 .

International Steam Pump Co.—We are informed that the plan of organisation, dated August 5, 1915, has been declared operative by the Joint Reorganisation Committee.

South British Insurance Co.—Dividend for last six months 2*s.* 3*d.* per share.

United States and South American Investment Trust Co.—Interim dividend at the rate of 4% per annum on Ordinary.

Life Assurance at Minimum Rates

THE WHEAT POSITION.

In the days of yore the outbreak of hostilities between nations led to very severe fluctuations in the price of wheat, and speculators took advantage of the position to forestall and make huge profits. The Governments of these days have taken all possible means to prevent this heartless system of forestalment, and the outcome of Government action has been an appreciable set-back from a big rush up in prices of wheat. The last week or two there has been a hardening trend in the market, but, while there is some divergence of opinion upon the subject, we believe, on examination of the statistical position, that this trend is likely to be only

temporary, for the increase in the acreage and crops of the world have been very considerable, and the surplus quantities of producing countries over their actual requirements have been very great. The statistics present very interesting features.

A week ago the *London Grain, Seed and Oil Reporter* gave particulars of the probable requirements of importing countries this season and the estimated surpluses in exporting countries, based on the latest information available:—

	Estimated Requirements Qrs.		Estimated Surpluses Qrs.
United Kingdom ..	25,000,000	United States	45,000,000
France	7,000,000	Canada	24,000,000
Italy	7,000,000	Argentina	12,000,000
Holland and Belgium ..	7,000,000	Australia	8,000,000
Spain and Portugal ...	1,000,000	India	6,000,000
Scandinavia, Switzerland, Greece, &c.	6,500,000	North Africa, &c. ...	1,500,000
		Total	96,500,000
Total Europe ...	53,500,000	Russia (including balance of 1914 Crop)	30,000,000
Non-European Countries	9,000,000	The Balkans	10,000,000
Grand Total ...	62,500,000	Grand Total ...	136,500,000
Germany	9,000,000		

In this weeks issue it says:—

"The market has ruled firm in tone throughout the week, and a good trade has been done at steadily advancing prices, more especially in wheat afloat and for early shipment. The principal causes for the improvement are the continued small shipments to, and imports into, the United Kingdom, and the improvement in values in America, where the successful arrangement of the loan for the Allies has more than counterbalanced the effect of increasing receipts at the different grain centres.

"This week's shipments are expected to show a fair increase, and, judging from the very large quantity of wheat daily arriving at Winnipeg and being despatched from that place to the shipping centres, exports from Canada next month and also in November and December promise to be on a considerable scale; in fact, if freight room be obtainable, it is quite possible that the shipments from Canada in the next three months will furnish a record. Farmers delivered English wheat more freely last week, and, in view of the much bigger crop this year, native wheat ought to come forward in large quantities for some months. It is most probable that towards the end of October there will be sufficient wheat arriving from abroad, added to the supplies of native wheat, to satisfy the consumptive requirements of the United Kingdom, whilst later on, if the present favourable crop outlook in Australia and Argentine materialise, very large quantities of wheat will be available, and exports will, to a great extent, be only restricted by the amount of freight room procurable and the rate of freights."

COLONIAL WOOL SALES.

A SUGGESTION TO THE IMPORTERS' COMMITTEE.

YESTERDAY saw the finish of the sixth series of Colonial sales, after lasting from September 7. This is the first time in the history of the trade for a good many years that a series of sales has taken place so early in autumn, but the Importers' Committee acted very wisely in deciding to hold a series early, and as far as we know the trade has not in the least been inconvenienced. It is imperative that as wool arrives from Australasia buyers be given the opportunity of getting at the wool with all possible speed, and also it is to the advantage of the dock people to be shifting it on to consuming centres with equal facility. There is still congestion at the Port of London, though uptown warehouses seem able to deal more effectively with the wool than the dock people. Of course, the Port of London Authorities are responsible for handling all arrivals; but the trade will know well the increased difficulties which they are having to face, and there has been less railing at the Authorities by buyers during the past month than heretofore this year, the trade recognising it must make the utmost allowance for the present unparalleled conditions.

Before we finish this article we have a recommendation to make to the Port of London Authority Importers' Committee, and the selling brokers, which if acted upon will help materially in the conduct of the sales, and enable selling brokers to catalogue 10,000 to 12,000 bales per day in place of the present 8,000 bales.

Looking over the course of the auctions, we are faced with the feature of the hearty reception which good shafty merinos and crossbreds have met. From first to last these wools have been in prime favour, and they have been bought in a real encouraging way. Neither importers nor selling brokers can complain that no interest has been shown in wools of good length and decent condition, and we consider that good merinos have sold on a full parity with the close of July, and often made a fraction more. The huge quantities of medium and faulty parcels have hung fire and sold most irregularly. Unfortunately, this class of staple has formed the bulk of the offerings, and here there has been no regularity about the market whatever. Often lots have been put in at a price and finally sold at 2*d.* to 3*d.* more, the auctions at times being very slow and dragging. Even selling brokers themselves hardly know what to put the decline at, and medium parcels can be called 1*d.* cheaper both in grease and scoureds, while the more faulty wools, which cannot be used without being carbonised, have lost ground anywhere from 1½*d.* to 3*d.* Anything that has not needed to be carbonised has not sold at all badly, and scoured clean, straight locks and pieces that can be used straight from the bale have made relatively good prices, it being the seedy, faulty, burry wools, both greasy and scoured, that have lost ground sensibly.

The way Cape wools have moved has certainly been disappointing. Long combing, greasy Capes have not eased more than ¼*d.*, but heavy, faulty wools are down about ½*d.* Super snow-whites have also lost on an average 1*d.*, while the medium and faulty wools have lost fully 2*d.* to 2½*d.* America has bought very little indeed of scoured Cape wools, a line of action they have not pursued for several series.

The course of crossbreds has been creditable. We are glad that the War Trade Department made it clear early in the auctions that they were prepared to consider favourably applications for the export of this class of wool to our Allies and the United States. We know there are a few interested spinners in Bradford who would deliberately refuse the export of all wool, but such a policy is selfish in the extreme. The opposition that some have shown to the granting of licences for the export of wool and tops is indeed incredible. Of course, their retention in this country would have meant distinctly lower prices for crossbred wool and tops, while a keen demand for crossbred yarns would have maintained prices for that commodity at the present high level, and so increased spinning margins. We are glad that wiser counsels have prevailed.

Some three to four months ago, when we discerned that the Government was not in need of further khaki, and that no new orders were going to be given out, we saw clearly that there were surplus stocks of crossbred and English wools that could be exported to safe destinations, and the present move is one which we entirely endorse. Even for economical reasons it is imperative that what we can export should be allowed out of the country to safe quarters, and we believe the privilege of export through the Textile Alliance to America will not be abused. The result is that crossbred wools have directly benefited through American competition. We are not able at this writing to say the exact amount of wool purchased on American account, but the several thousand bales which have been taken has all assisted prices for good parcels, the result being that for really well-conditioned wools values have appreciated ½*d.* to 1*d.* per pound on the semi-slump values that ruled towards the end of July. We cannot see any improvement in medium and faulty wools, these being

taken readily by the home trade at unchanged rates. Scoured crossbreds and slipes have sensibly eased, particularly the latter. This is the direct result of there being no new khaki orders in prospect, and good sliped lambs both half-bred, three-quarter bred, Leicester and Lincoln, have depreciated all round 2*d.*, while seconds and thirds have lost anywhere up to 3*d.* Of course, these wools have been abnormally dear, realising sensibly above their intrinsic value, and the fall was in no sense unexpected, although importers do not like it.

The next series has been fixed to begin on October 26, and the final auction for the year on December 7. What to-day is engaging the Port of London Authority and the Importers' Committee is the congestion at the docks. The trade is up against a very serious problem, and it needs the combined wisdom of all sections of the trade to solve it. Buyers have grumbled a good deal because they have been compelled to sit for four weeks in succession at the sales, and if a remedy could be found for this it would be a real godsend. We have strongly maintained that three weeks is long enough, and suggest that auctions lasting that length of time could be held, with a vacation of the same duration. The most serious difficulty for selling brokers is the delay which the dock people have to contend against in staging wool. About 8,000 bales seem at present to be the maximum. This is not enough, and a remedy ought to be found. This is our solution to the problem. With the beginning of the next series there should be available big straight lines of new-clip wools. Is it necessary to stage every bale in a lot, say, from 20 bales upwards? In Australia the selling brokers stage about 10% of the offerings, and that satisfies buyers. Cannot the same be done in London until the War finishes? We respectfully suggest that it is absolutely unnecessary to catalogue every bale in lots figuring from 15 to 50 bales, and if half the quantity were catalogued, buyers having the privilege of demanding the inspection of all the bales, we are satisfied that the warehouse-keepers could then stage sufficient wool to cover the disposal each day of anywhere from 10,000 to 12,000 bales. With Australian selling brokers adopting this we are confident it could easily be done in Coleman Street, with the same satisfactory results. It is, as a rule, on the small lots where irregularity in classing occurs, and every buyer knows that on good standard clips, with which everyone is familiar, there is a uniformity of classing and baling which would justify 10 bales out of every 20 being shown. It might be necessary to catalogue the whole of the skin wools in a lot, but on good station classed clips it is absolutely unnecessary to catalogue the whole, and we strongly contend that by submitting, say, half the wools, in the same way as the English wools were offered in July, that would satisfy buyers, and so enable selling brokers to offer daily anywhere from 10,000 to 12,000 bales. This would shorten the series, and be the means of wool moving more freely into the hands of consumers.

AMERICAN COTTON.

LIVERPOOL: Thursday.

OUR market has been under the influence of a wave of speculative buying, which has swept everything before it in the American exchanges, and has brought about an advance to correspond here. The business in futures transacted in New York has reached extraordinarily large dimensions; the outside American public has caught the "bull" fever badly, and has followed the advance blindly until its enormous purchases have left that market in a very vulnerable and extremely dangerous position. The "bull" enthusiasm has infected Southern spot holders, who have demanded an impracticable basis for their cotton, and Liverpool importers have been able to make only occasional purchases. Consequently hedge selling by importers has been very restricted, and no weight of cotton has been thrown in the market to resist the upward trend of values. Winter positions have sold well over 7*d.*, but the market tone lately has been unhealthy and feverish, violent fluctuations have been witnessed. On Wednesday the difference between the highest and lowest prices paid was nearly ¼*d.* per pound. To-night's closing rates show gains of fully ½*d.* per pound for American and over 1*d.* per pound for Egyptian. At the close Jan./Feb. American was quoted 6.98*d.* and January Egyptian 10.20*d.*

A little while ago there was a disposition to look upon the crop prospects as suggesting a yield of 14,000,000 bales, which would have been much in excess of the world's requirements. The then impending decision of the British Government to declare cotton contraband, and its action in preventing cotton supplies reaching enemy countries, and so cutting off an effective demand of anywhere between two and three million bales, was considered to be a potent "bear" factor, and the majority of traders looked for lower prices. A spell of unfavourable weather, followed by the industrious dissemination of small crop estimates of 10 million bales and even lower; exaggerated estimates of consumption, and the apparent failure of the contraband declaration to affect prices adversely; the intimation that in case of need the British Government would support the market, produced a revulsion of feeling and a rush to buy, which has carried prices up by leaps and bounds. As we believe that the market is being misled by unduly small crop estimates and by unduly large consumption estimates, we think prices are now above the intrinsic value of cotton, and when later on the facts of the position assert themselves we expect to see prices decline.

Although the sudden advance has made business in Manchester very difficult, spinners have continued to buy freely on the spot. The narrowing of the difference between distant and near positions has left merchants with an inadequate carrying premium, and has rendered them more disposed to meet buyers and sell rather than incur a loss in holding expenses. Nevertheless the selling basis has been well maintained, and better qualities with staple still command full rates.

POOLING INSURANCE.

THE MOST

Economical, Perfect, and Complete

FORM OF

MUTUAL INSURANCE

WITHOUT LIABILITY.

FIRE, MOTOR, ACCIDENT, &c.

EMPLOYERS' LIABILITY, FIDELITY, &c.

FOR SELECTED RISKS.

The business is strictly confined to non-hazardous risks in Great Britain.

All profits (less 5% guarantee premium) are returned to the Insured in the form of discounts from renewal premiums.

These facts present the prospect of unparalleled advantages to members of the "Pool."

NORFOLK & WESTERN RAILWAY CO.

NINETEENTH ANNUAL REPORT—FOR THE YEAR TO JUNE 30, 1915.

Roanoke, Va., August 31, 1915.

To the Stockholders of the Norfolk & Western Railway Company:

Your Board of Directors submits the following report for the year ending June 30, 1915 :—

MILES OF ROAD AND TRACK IN OPERATION.

	June 30, 1915. Miles.	June 30, 1914. Miles.	Inc. Miles.
Main line	1,542.98	1,542.98	
Branches—	Miles.	Miles.	
Operated as second track	90.36	90.36	
Other branches	396.27	389.53	
	486.63	479.89	6.74
Total miles	2,029.61	2,022.87	6.74
Operated under trackage rights	13.98	13.98	
Total miles of road in operation	2,043.59	2,036.85	6.74
Second track	524.32	490.74	33.58
Third track	3.46	3.20	.25
Sidings and yard tracks	1,254.50	1,229.88	24.62
Total miles of all tracks in operation	3,825.86	3,760.67	65.19
Average miles of road operated	2,041.95	2,035.91	6.04
Average miles of track operated	3,792.50	3,645.33	147.17

The increase in miles of road in operation is as follows :—

Branches—	Miles.
Alma Branch	.69
Mate Creek branch	4.48
Mitchell Branch of Mate Creek branch	1.57
	6.74

38	Dec. 19, 1914	Nov. 30, 1914	1½	107,817,900	1,617,268 50
39	Mar. 19, 1915	Feb. 27, 1915	1½	107.913,400	1,618.701 00
40	June 19, 1915	May 31, 1915	1½	108,083,400	1,621,251 00
			6		6,474,321 00
Dividend adjustment on Common stock issued in exchange for Convertible bonds					2,301 00
					6,476,622 00

The increase in the amount of dividends on Common Stock is due to the issue of additional shares in exchange for Convertible Bonds surrendered.

CAPITAL STOCK.

The amounts of Adjustment Preferred and Common capital stock authorised and issued are now as follows :—

	Authorised	Issued. Par Value	Issued. Shares
Adjustment Preferred stock	$23,000,000	$23,000,000	230,000
Common stock	150,000,000	108,156,000	1,081,560
Total June 30, 1915	$173,000,000	$131,156.000	1,311,560
Total June 30, 1914	173,000.000	130,760,500	1,307,605
Increase (all Common stock)	—	$395,500	3,955

The additional 3,955 shares of Common Stock outstanding were issued in exchange for $395,500 Convertible Bonds, surrendered for conversion, as follows :—$132,000 Convertible 10-25 year 4% Gold Bonds of 1907, $67,300 Convertible 10-20 year 4% Gold Bonds of 1912, $196,200 Convertible 10-25 year 4% Gold Bonds of 1913.

There are in the Treasury 82 shares ($8,200) of Adjustment Preferred Stock and 16 shares ($1,600) of Common Stock. One share of Adjustment Preferred Stock was exchanged for Dividend Scrip issued by the old Norfolk and Western Railroad Company, in accordance with the Company's policy of taking up the securities of the old Company, of which but few are now outstanding.

Of the $41,844,000 authorised but unissued Common Stock, $15,066,000 is reserved for the conversion at par of the outstanding Convertible Bonds.

FUNDED DEBT.

The aggregate Funded Debt outstanding is as follows :—

	June 30, 1915.	June 30, 1914.	Dec.
Mortgage bonds	$83,276,500	$83,283,500	$7.000
Convertible bonds	15,066,000	15,461 500	395.500
Equipment trust obligations	11,100,000	12,900.000	1,800,000
	$109,442,500	$111,645,000	$2,202,500

The decrease in the amount of Mortgage Bonds outstanding is due to the retirement by purchase of $7,000 General Mortgage Bonds, the par of which was paid by the Trustee of that mortgage out of the proceeds of the sale of the Company's Maple Shade Inn property at Pulaski, Va., to the Maple Shade Inn Company, Incorporated; the premium and accrued interest on the bonds were paid by your Company. The purchase price of the property was $27,000, and since the close of the fiscal year $20,000 additional General Mortgage Bonds have been similarly purchased.

The decrease of $395,500 in the amount of Convertible Bonds outstanding is due to the conversion into Common Stock of $395,500 of Convertible Bonds as described above

under the head "Capital Stock." The decrease in the amount of Equipment Trust Obligations results from the payment of matured Equipment Trust Certificates. The interest on Equipment Trust Obligations shows an increase over the preceding year because the $10,000,000 Equipment Trust Certificates, Series of 1914 (which were sold April 9, 1914), bore interest for less than three months of the preceding year.

There are in the Treasury $13,000 First Consolidated Mortgage 4% Bonds, $269,000 Convertible 10-20 year 4% Gold Bonds of 1912, and $1,213,000 Convertible 10-25 year 4½% Gold Bonds of 1913.

There is still an unissued remainder of $8,431,000 of the Convertible Bonds authorised by the stockholders October 11, 1906.

On April 1, 1915, the final payment of $200,000 was made under the Company's Equipment Trust, Series "C," and a bill of sale was thereupon executed by the Commercial Trust Company, Trustee, conveying to your Company the following equipment forming the security under said Equipment Trust:—17 freight locomotives, 2,000 hopper coal cars, the original cost of which was $2,024,082.92.

Pursuant to the provision of the Company's First Consolidated Mortgage, the Trustee of that mortgage has cancelled and surrendered to the Company the following described old Divisional Lien Bonds, to wit:—$496,000 Norfolk and Petersburg Railroad Company's Second Mortgage Bonds, $980,000 Virginia and Tennessee Railroad Company's Enlarged Mortgage Bonds, $1,000,000 Virginia and Tennessee Railroad Company's Fourth Mortgage Bonds, $1,012,300 Southside Railroad Company's Consolidated Mortgage Bonds.

The Trustee of the Norfolk and Western Railroad Company's General Mortgage, pursuant to the provisions of that mortgage, has cancelled and surrendered $722,700 Southside Railroad Company's Consolidated Mortgage Bonds, $5,000 Virginia and Tennessee Railroad Company's Enlarged Mortgage Bonds.

A release of the Norfolk and Petersburg Mortgage has been executed by the Trustee and recorded in all the counties in which the mortgage was recorded. Arrangements are being made for the release of the Virginia and Tennessee Mortgages and the Southside Consolidated Mortgage, but as the individual trustees named in these mortgages have been dead for many years it will be necessary to petition the proper courts for the appointment of new trustees to execute the releases.

ROAD AND EQUIPMENT.

The total additions to cost of road and equipment shown in detail in full Pamphlet Report were $6,870,149.60.

From the commencement of operations, October 1, 1896, to June 30, 1915, your Company's Property Investment in road and equipment increased	$123,649,404	16
There were also direct charges to income for additions and betterments, aggregating	15,473,521	12
Total road and equipment expenditures	$139,122,925	36

Of these expenditures, your Company's income provided the following amounts:—

Direct charges to income as above	$15,473,521	16
Appropriations from Surplus Income for additions and betterments	17,019,102	46
Total	$32,492,623	62

In addition, by means of charges to operating expenses and surplus income, depreciation reserve credits have been created as follows:—

Charges to operating expenses for a road depreciation reserve	$642,793	52
Charges to operating expenses for an equipment depreciation reserve	10,833,934	68

From October 1, 1896, to June 30, 1915, there have been added to your Company's property 459.32 miles of main line and branches, 470.30 miles of second track and 3.45 miles of third track and 816.11 miles of sidings, and to its equipment 682 locomotives, 206 passenger train cars, 31,320 freight train cars, and 913 work train cars.

The increases in tractive power and capacity are very much greater than in the number of locomotives and cars, as is shown in the following table comparing the equipment of October 1, 1896, with that of June 30, 1915:—

Locomotives—Increase in number, 168 %; in tractive power, 385 %.
Freight cars—Increase in number, 196 %; in ton capacity, 436 %.

The double track work reported in the preceding annual report as in progress has been completed.

Double track work is now in progress between Jack, Va., and Ford, Va., 13.58 miles, which will be completed by December 1915. There is also under construction a low-grade line between Burkeville, Va., and Pamplin, Va., a distance of 36.93 miles, which it is expected to put in operation in the early part of 1916. There will then be in operation between Lambert's Point and Columbus 686.24 miles of double track main line (including as second track the low-grade lines around Petersburg, Va., and Lynchburg, Va., the Big Sandy Line and the Burkeville-Pamplin Line), and 19.83 miles of single track.

The single track is between Radford, Va., and Coaldale, W. Va., in sections which total 15.90 miles, east of Wharncliffe, W. Va., 2.22 miles and at Columbus, O., 1.71 miles. The latter and the parallel track of the Cleveland, Akron and Columbus Railway are operated jointly by the two companies as double track.

The new equipment received during the year was as follows:—

40 freight locomotives (steam).
8 freight locomotives (electric).
5 all-steel dining cars.
2 all-steel flat bottom gondola cars, 180,000 pounds capacity.
537 all-steel hopper coal cars, 110,000 pounds capacity.
88 steel underframe cabin cars.
2 steam derrick cars.
2 locomotive cranes.
1 harbour barge.

Of the new equipment, two all-steel flat-bottom gondola cars, 537 all-steel hopper coal cars, and 88 steel underframe cabin cars, were built at your Roanoke Shops.

ADDITIONS AND BETTERMENTS TO WAY AND STRUCTURES.

10.60 miles of main track were relaid with 100-pound rails.

10.64 miles of re-sawed 85-pound-rails were laid, 8.74 miles on Clear Fork Branch and 1.90 miles on Durham District.

404,846 cubic yards of stone and 115,100 cubic yards of gravel were used in standard ballasting on main line.

Passenger stations and freight depôts were built or enlarged at Waverly, Riverton, Wirtz, South Boston, and Shawsville, Va., Charles Town and Kermit, W. Va., and Mayodan, N.C.

Shelter sheds were erected at New Bohemia, Hopewell, Overall, Rocky Mount, Doran, and Faraday, Va., Buffalo Creek, Canebrake and Havaco, W. Va., and Beaver Pond, Ohio.

Section houses were erected at Sutherland, Va., and Excelsior and Maybeury, West Va.

Tool houses were erected at Wellville, Pamplin, and Spout Spring, Va., and Sciotoville, Ohio.

Motor-car houses were erected at Coaldale and Devon, W. Va.

Stock pens were erected at Shenandoah, Va., and Charles Town, W. Va.

A 100-foot turntable was installed at Roanoke, Va.

150 ton scales were installed at Norfolk, Va., and Ironton, Ohio, and a 200-ton scale at Bluefield, W. Va.

Crossing-gates were erected at South Norfolk, Wakefield, Lynchburg, and Abingdon, Va., and crossing-bells were installed at Norfolk, Ivor, Roanoke, and Meadowview, Va., Landgraff, W. Va., and Locks and Columbus, Ohio.

An ice-house was constructed at Clare, Ohio.

A government coal inspectors' office was constructed at Lambert's Point, Va.

The superstructure on Pier No. 1 at Lambert's Point, Va., was removed and the pier prepared for the handling of pig iron and lumber business.

Automatic signals were installed between Dwight, Va., and Disputanta, Va., and between Bluefield, W. Va., and West Vivian, W. Va., making 98.7 miles of single track and 515 miles of double track equipped with automatic signals.

Interlocking plants were installed at Waverly, Va., and Glen Jean, Ohio.

A power-house for automatic signals was erected at Dwight, Va.

Two 50,000-gallon water-tanks were erected at Farm, W. Va., and a 100,000-gallon tank at Pulaski, Va.

Pump-houses were erected at Norton, Va., and Farm, W. Va.

A boiler-house was erected at Williamson, W. Va.

A foot-bridge was erected over main-line tracks at Roanoke Shops.

Three pneumatic ash-hoists were erected at Bluefield, W. Va.

360 feet of Pepper Tunnel were lined with concrete.

The lining of Dingess Tunnel was completed, 682 feet of brick lining being placed, including a 9-foot portal on the east end.

Pocahontas Tunnel No. 2 was lined with concrete.

126 feet of wooden bridges and 68 feet of iron bridges were replaced by masonry.

743 feet of wooden trestle and 121 feet of light iron bridges were replaced by fit iron bridges removed from main line. 520 feet were replaced by new steel structures.

1,580 feet of bridges were built to increase water way for flood defence in the State of Ohio.

Passing sidings were extended at Lowry, Bedford, Montvale, Bonsack, and Walton, Va., and Dorney, Ohio.

The yards at Lambert's Point and Norfolk, Va., and Bluefield and Williamson, W. Va., were enlarged.

15 highway grade crossings were eliminated [illegible] by undergrade crossing of steel, two by undergrade crossings of masonry, ten by overhead crossings of steel, and two by [illegible] One railway grade crossing was eliminated by undergrade crossing of masonry.

23.41 miles of [illegible] were erected.

MAINTENANCE EXPENDITURES.

The expenses for Maintenance of Way and Structures and comparison with the preceding year are as follows:—

	1914-15.	1913-14.	Inc. or Dec.	%
Total expenses	$5,738,071 23	$4,998,612 25	+ $739,461 98	14.79
Av. per mile of road oper.	2,810 09	2,455 22	+ 354 87	14.45
Av. per mile of track oper.	1,513 01	1,371 23	+ 141 78	10.34

The expenses for Maintenance of Equipment and comparison with the preceding year are as follows :—

	1914-15.	1913-14.	Inc. or Dec.	%
Total maintenance of equipment expenses	$8,341,419 27	$9,214,007 34	— $872,588 07	9.47
In which are included :				
Locomotives : Repairs, renewals and depreciation	3,107,385 09	3,298,700 94	— 191,315 85	5.80
Aver. per locomotive ..	2,855 18	3,119 84	— 264 66	8.48
Aver. per 100 miles run	13 36	12 40	+ 0 96	7.74
Pass. Train Cars : Repairs, renewals & depreciation	368,507 86	384,576 43	— 16,068 57	4.18
Aver. per pass. car ...	826 40	870 42	— 44 02	5.06
Aver. per 100 miles run	1 53	1 55	— 02	1.29
Fr't. Train Cars: Repairs, renewals & depreciation	4,339,385 65	4,998,963 33	— 659,577 68	13.19
Aver. per freight car	90 75	107 76	— 17 01	15.78
Aver. per 100 miles run	0 90	1 01	— 11	10.89
Work Equipment Cars : Repairs, renewals and depreciation	63,945 78	80,357 31	— 16,411 53	20.42

There were in the shops undergoing and awaiting repairs at the close of the year, 195 locomotives, or 17.9% (63 needing only light repairs); of this number there were 55 heavy freight locomotives, or 7.9% of this class of locomotives, the remaining 140 being passenger engines and light freight engines, the latter of obsolete types which may be sold or scrapped; there were also 19 passenger cars, or 4.2% and 2,108 freight and work equipment cars, or 4.3%. These figures evidence the fact that the decrease above shown in the cost of maintenance of equipment was not obtained at the expense of efficiency.

Additions to and replacement of shop machinery have been made at a cost approximately as follows :—

Roanoke shops	$8,119
Portsmouth shops...	426
Bluefield shops	330
Williamson shops...	1,380
Outlying shops	17,457
Total	27,712

TRAFFIC AND REVENUE COMPARISONS.

Comparison of traffic and revenue figures with those of the preceding year shows the following interesting changes :—

				%
Number of passengers	increased	148,633		2.37
Average haul of passengers...	decreased	2.47	miles	6.74
Revenue from passenger fares	decreased	$169,141.14		3.45
Average rate per passenger per mile ...	increased	0.025	cent	1.17
Revenue freight carried	decreased	1,232,871	tons	3.63
Average haul of freight	increased	2.90	miles	1.08
Revenue from freight transportation ...	decreased	$1,488,071.72		3.91
Average rate per ton per mile	decreased	0·065	cent	1.20
Average tons of rev. fr't. per train mile ..	increased	39.37	tons	4.91
Shipments of coal	increased	60,067	tons	0.26
Shipments of coke	decreased	484,291	tons	35.40
Shipments of ore	decreased	155,857	tons	19.80
Shipments of pig and bloom iron ...	decreased	211,243	tons	33.98
Shipments of lumber	decreased	306,937	tons	17.02

POCAHONTAS COAL AND COKE COMPANY.

The sinking fund provided for in the Pocahontas Coal and Coke Company's Purchase Money First Mortgage dated December 2, 1901, amounted for the calendar year 1914 to $224,465.49. Through this and other sums received by the Trustee under the terms of the mortgage, bonds aggregating $259,000 were purchased and cancelled. From the beginning of its operation in 1906 to date, the sinking fund has received from royalties on coal mined the sum of $1,923,420.30 and from the sales of lands the sum of $131,794.22, a total of $2,055,214.52, by means of which there have been purchased and retired bonds to the aggregate amount of $2,277,000, reducing the outstanding bonds to $17,723,000, and leaving a cash balance of $47.55 in the Sinking Fund.

The work of unifying the Company's properties, completing its titles and surveying, monumenting and mapping its lands is progressing. Your Company has advanced to the Pocahontas Coal and Coke Company for these purposes the further sum of $74,000, making a total to date of $1,465,000 charged in your Company's accounts as advances to that Company for property expenditures.

VIRGINIA-CAROLINA RAILWAY.

The North Carolina Division of the Virgina-Carolina Railway was completed and has been in operation since May 31, 1915, to Elkland on the Ashe-Wautauga County Line, N.C., a distance of 48.64 miles. The cost of this division to June 30, 1915, was $1,207,759.12.

The operations of the Virginia-Carolina Railway have been profitable, and the indications are favourable for continued prosperity.

NEW RIVER, HOLSTON AND WESTERN RAILROAD.

The extension from Rocky Gap to Suitars in Bland County, Va., a distance of 13.87 miles, was completed and put in operation September 10, 1914. The total cost of the extension to June 30, 1915, was $253,857.60.

The extension of this line gives access to large bodies of timber, the development of which is proceeding.

TUG RIVER AND KENTUCKY RAILROAD.

The bridge over Tug River, referred to in the previous annual report, has been erected, and track has been laid a distance of 0.89 mile to Blackberry Creek. The grading of the line up Blackberry Creek to the mouth of Peters Fork, a distance of 1.38 miles, has been completed.

By deeds dated June 23, 1915, your Company conveyed to the Tug River and Kentucky Railroad Company the Poplar Creek Branch ,1.93 miles in length, in consideration of the sum of $16,130.85, and the Freeburn Branch, 1.55 miles in length, in consideration of the sum of $49,668.99. These branches are located in Kentucky; they have been operated by the Tug River and Kentucky Railroad Company from July 1, 1915.

WILLIAMSON AND POND CREEK RAILROAD.

Leckie Spur, 1.03 miles in length with a Y connection 0.15 mile in length, is being built to reach operations of the Leckie Collieries Company.

BURKEVILLE TO PAMPLIN LOW-GRADE CONNECTING LINE.

This line, 36.93 miles in length, is under construction from Pamplin, Va., to Burkeville, Va. Instead of double-tracking your Company's present line an entirely new line is being built with better grades and curvature and at less cost, which will be operated as a second track, furnishing a low-grade line for east-bound traffic. Its maximum grade will be 0.1 per cent., and its maximum curvature 1.5 degrees. It is expected that the line will be in operation in January 1916.

JACOBS FORK BRANCH.

Jacobs Fork Branch is under construction from its junction with Dry Fork Branch at Rift, W. Va., a distance of 3.93 miles, to reach operations of the New River and Pocahontas Consolidated Coal Company. Grading is about 75 per cent. completed. The Cucumber Branch of Jacobs Fork Branch, 1.28 miles in length, to other operations of the same Company is under construction. Grading is 90 per cent. completed.

MATE CREEK BRANCH.

This branch, 4.48 miles in length, and Mitchell Branch of Mate Creek Branch, 1.57 miles in length, with 3.39 miles of sidings, to operations of the Red Jacket Consolidated Coal and Coke Company and the Red Jacket Junior Coal Company were purchased from those companies May 7, 1915, at a cost of $98,000.

ALMA BRANCH.

This branch, 0.69 mile in length, to operations of the Crystal Block Coal and Coke Company was purchased from that Company on December 20, 1913, at a cost of $5,000. The grade was revised and track relaid and its operation as a branch was commenced in September 1914. An extension of 2.55 miles was placed in operation shortly after July 1, 1915.

ELECTRIFICATION.

The electrification of the line between Bluefield and Vivian, W. Va., a distance of 29.35 miles, is practically completed.

The power plant and line work are finished and 8 of the 12 electric locomotives contracted for are in service. The traffic results already obtained from this work indicate that the capacity of the line has been doubled and that the operating cost per ton mile will be materially reduced.

The cost of the electrification to June 30, 1915, was $3,128,224.04.

TRACKAGE AGREEMENT.

Under authority of your Board an agreement dated July 21, 1915, has been executed granting to the Chesapeake and Ohio Northern Railway Company trackage rights over 61.86 miles between Waverly and Valley Crossing, Ohio. The agreement runs for five years and may then or thereafter be terminated by two years' notice by either party.

The Chesapeake and Ohio Northern Railway will be a connecting line between the Chesapeake and Ohio Railway at or near Edgington, Ky., and the Hocking Valley Railway at Valley Crossing, Ohio. It is expected that the line from Edgington to Waverly, now under construction, will be completed during the fall of 1916, when the trackage contract with your Company will become effective.

NEW INTERSTATE COMMERCE COMMISSION CLASSIFICATIONS.

Taking effect July 1, 1914, new classifications of Investment in Road and Equipment, of Operating Revenues and Operating Expenses and of Income, Profit and Loss and General Balance Sheet Accounts were ordered by the Interstate Commerce Commission, superseding previous classifications which had been in effect from two to seven years. The changes are so numerous and important as to make it impracticable to present with the usual completeness detailed comparisons of operating expenses with those of the preceding year.

In addition to the Equipment Depreciation Reserve, which has been in operation for seven years, the new classification of operating expenses provides for the creation of depreciation reserves for other railroad property by means of charges to operating expenses. The use of these depreciation accounts, however, is for the present optional with the carrier. Your Company has availed itself of the permission to set up such accounts, but, to begin their operation conservatively and to avoid large initial charges to operating expenses for depreciation of such property, only the larger structures have been considered, leaving the extension of the plan to cover smaller structures for consideration at a later date, when experience shall have more clearly indicated the best permanent course. As a result, there has been charged to operating expenses the sum of $642,793.52, which has been credited in the General Ledger to the appropriate reserve account specified in the order of the Interstate Commerce Commission. No charges to operating expenses for a

depreciation reserve for roadway and structures had been made in previous years.

Among the new accounts opened in Operating Expenses is "Transportation for Investment—Credit." By means of this account operating expenses are credited with the cost of transporting on revenue trains men engaged in and material for construction, which expense is concurrently charged to the appropriate property investment accounts.

WEST VIRGINIA 2-CENT PASSENGER-RATE CASE.

In 1907 the Legislature of West Virgina passed an act fixing the maximum fare for intrastate passengers on railroads at two cents a mile. After the rate had been tested by operating under it from May 1907 until September 1909, your Company, considering it to be confiscatory, brought suit in the Circuit Court of Kanawha County, West Virgina, to restrain its enforcement, and under the terms of an interlocutory injunction restored the rates for passenger fares in effect before the Act was passed. Pending the determination of the suit, which was decided by the Circuit Court against your Company and appealed to the United States Supreme Court, the amounts collected from passengers in excess of two cents a mile were not included in operating revenues, but were held as a fund to be distributed, in the event of a final adverse decree, to the holders of receipts given to passengers under the order of the Court, for fares paid in excess of the statutory rate. In an opinion dated March 8, 1915, the United States Supreme Court reversed the judgment of the Circuit Court and declared the rate fixed by the West Virginia act to be confiscatory as to your Company, whereupon a final decree was entered May 10, 1915, in the Circuit Court of Kanawha County which established the title of the Company to the entire accumulation in the fund. This included the sum of $386,165.97 which had accrued between September 16, 1909, and June 30, 1914. Application was made to and granted by the Interstate Commerce Commission for permission to credit this amount to Profit and Loss in the accounts of the year covered by this report. The additional amount accrued in the fiscal year ending June 30, 1915, has been included in the passenger revenues of that year.

TAXES.

The amount charged to Income for Railway Tax Accruals again shows a substantial increase. In the last three calendar years the ratio of Taxes to Net Railway Operating Revenues was as follows: 10.00 per cent. in 1912; 10.76 per cent. in 1913; 11.85 per cent. in 1914.

CONDENSED GENERAL BALANCE SHEET, JUNE 30, 1915.

The balance Sheet conforms to the arrangement prescribed in the Order of the Interstate Commerce Commission taking effect July 1, 1914. For comparison with figures of the preceding year headings have been changed with the new Order.

INDUSTRIES.

Among the new local industries are the following: 15 manufactories of mineral, metal and other products, 13 manufactories of lumber products, 6 manufactories of farm implements and farm products, 6 coal mines.

At Hopewell, Va., on the City Point Branch, the E. I. du Pont de Nemours Powder Company is constructing an extensive nitro-cellulose plant, from which an average shipment of 20 cars of nitro-cellulose daily is already being made.

At the close of the year there were 146 companies organised for producing coal and coke on your Company's lines, with a total of 233 separate mines, of which 214 were in actual operation.

Of the 13,931 coke ovens, 2,034 were in blast.

Of the 22 iron furnaces with a total daily capacity of 3,490 tons of pig, 5, having a total daily capacity of 930 tons, were in blast.

OBITUARY.

W. C. Walstrum, Superintendent of Telegraph, died on May 8, 1915. Mr. Walstrum had held this position for twenty-six years, and had rendered most efficient and loyal service.

The vacancy in the office of Superintendent of Telegraph, occasioned by the death of W. C. Walstrum, has been filled by the appointment of George W. Jett.

The certificate of Price, Waterhouse & Co., the independent autditors elected by the stockholders to audit the books and accounts of the Company, is attached to the Balance Sheet.

The Board expresses its acknowledgement to the officers and employees for the faithful discharge of their duties during the year.

By order of the Board of Directors,
L. E. JOHNSON, *President.*

MEETINGS
OF PUBLIC COMPANIES.

THE SHEEPBRIDGE COAL & IRON COMPANY, LTD.

THE shareholders of this Company held their annual meeting at Sheffield on September 27, the directors present being Mr. Frederick Fowler, Right Hon. Lord Aberconway, P.C., Mr. W. H. McConnel, Sir Henry Norman, Bart., M.P., Mr. M. Deacon, and Mr. W. B. M. Jackson, with the Secretary, Mr. T. E. Haslam.

Effect of the War.

The Chairman, in proposing the adoption of the report, said the profit was £168,375, as compared with £217,092 in the previous year. The profit would have been larger but for the War, which, of course, had upset everything. Many things had conspired to reduce the profit. In the first place, the men did not work so well, and they got such high wages that they could afford to play at the end of the week. Recent legislation had also added greatly to the cost of coal production, so that there was not the same margin of profit.

The Future.

As to the future, he apprehended that soon after the War there would be some activity in reconstruction work, but there would be no enterprise and no great activity of trade, in his opinion, for a long time, probably years after the cessation of hostilities. He thought that the price of coal would keep up, at any rate, during the War, but the high cost of production would also keep up, so that the margin of profit would probably not be very seriously different from what it was at present. The coal at the new colliery at Rossington, in which the Company were largely interested, had proved to be 6 feet thick and of good quality. The leases in connection with the new Firbeck Colliery were now mostly arranged, and it had also been arranged with the railway companies to make a branch line to the colliery site.

Increased Cost of Production.

Lord Aberconway, who seconded, said that those who had read in the newspapers of the high price of coal might have expected a larger profit and perhaps a better dividend, but he thought that those who had looked at the balance sheets of other companies would agree with him that so far from colliery concerns having made larger profits during the War in nearly every case they had been smaller than for the year preceding it. He was interested, as a director, in at least 15 very important collieries, and what had happened in the case of Sheepbridge had happened in every other case without exception. The profits for the year down to the end of last June were less than for the corresponding year 1913-14. While prices were no doubt at a higher level now than they were six or twelve months ago, costs had very materially risen and were likely to rise still more, and the effect of legislation in cutting down prices at the pit and restricting the export of coal to neutral countries would, of course, be to reduce the margin of profit to the coalowner. He admitted that the public had had to pay high prices for fuel, but the profits had not gone to the coalowner. The coal merchant had had his share, the miners had had large increases in wages, and everybody who supplied stores to collieries had also had his share.

Shortage of Output.

The really important point to consider was the position of the coal trade as affecting the finances of the country during the War. The Sheepbridge group formed a very important element in the production of coal, and their turnover had been much reduced. Coal, pig iron, ironstone—everything except finished iron—had shown a reduction in output. That naturally meant a smaller profit. The capacity for production had enormously diminished during the War. From Sheepbridge and its subsidiary concerns 2,350 of their best men had enlisted, and what was true of Sheepbridge was true of every colliery in the country. He was sorry to say that the men who remained at home had not always worked their best. Higher wages in the coal trade did not, apparently, mean better work. How was this shortage of output affecting our national finances? Italy, Egypt, and the Argentine were some of our best customers for coal, and if collieries had worked to the fullest extent we should have been able to sell to these countries as much as in the previous year. Instead of that, we had not been able to deliver the coal. Altogether in those three countries alone our sales had been reduced by four million tons, which meant a serious loss to this country. When they considered the difficulty we were in in paying huge sums to the United States, and sending gold to buy the munitions of war, was it not the duty of every Englishman to work his level best to promote our exports? The coal question was not merely one for their own pockets, it affected the financial position of the country. With regard to the finances of the Sheepbridge Company they had to look forward to further expenditure at Rossington, Firbeck, and Glapwell, and also in connection with the Newstead Colliery, but with the funds already in hand and the further amount to come in next year from the new shares they were in a strong position to face the future.

The War Profits Tax.

[illegible] referred to the [illegible] war profits, saying that no one could complain of the policy of the Chancellor of the Exchequer, and, like all other Englishmen, they must put their hands in their pockets to carry the War through to a successful conclusion, but it must be remembered that the reduction in the exports of coal, due to the withholding of licences, has thrown a considerable quantity of coal back on the market, and finally, the price of coal is limited by the new Act of Parliament. He only hoped that by the men working their very best and endeavouring to increase the output, they would assist the national finances as far as possible.

The Report was adopted, and a dividend of 15 per cent. agreed to.

Lord Aberconway and Mr. W. H. McConnel were re-elected directors, and Messrs. Alfred Tongue and Co. were re-elected auditors.

THE PEARSON AND KNOWLES COAL AND IRON COMPANY, LIMITED.

THE forty-second annual meeting was held at Warrington on September 29, 1915.

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—I do not think I need say much about the accounts, the principal changes being: Additional amount owing to creditors 1914 £84,234, to 1915 £144,045, and a very large increase in amounts of stock, £83,569, and sundry debtors £72,969, and a decrease of £31,036 in cash and bills, leaving that amount at £80,838. The increase in sundry debtors arises from the higher prices current for sales, from Government orders not paid for on June 30, and from the inclusion of the dividend on the shares in the Partington Steel and Iron Company, Limited, £22,656, *i.e.*, 10% less income tax on £250,000 amount of our investment. I think we may all congratulate ourselves on this good return for the money so invested.

The Profit and Loss Account.

Now, as regards the profit and loss account and the disposal of the balance of profit, you will probably ask why we starved you by declaring no interim dividend to the ordinary shareholders in March last, and also why we

increased the transfer to reserve by so large a sum as £47,500, the largest transfer ever made in the history of the Company. Well, as regards the first question, our trading to December 31 was not unsatisfactory. We were luckier than most manufacturers in not having to shut down our works, and we began at once to feel the benefit of our investment in the Partington Steel and Iron Company, Limited, from whom we were able to obtain stocks to fill up the void produced by the war with Germany, and to continue our business. This was most important for both our works and also our men, but the result of the half-year arising from the prices at which our old contracts were made was unsatisfactory, and when the balance was struck to December 31 last the directors felt that they were not justified, with the uncertainty to face during the remaining six months of the year, in declaring an ordinary dividend. No doubt you will have all excused the omission when you have received the satisfactory dividend of 7½% which we are now paying out of the full twelve months' trading.

Large Transfer to Reserve.

As regards the second question, why we have transferred so large a sum as £47,500 to reserve instead of increasing the dividend, several reasons have induced us to adopt this figure; principally we have to face the great uncertainty which will arise about business at the close of the War, and we consider that we ought to build up a strong reserve to face the position at that time in case of difficulty. We are not yet free either from the state of confusion which exists amongst those appointed to regulate our trade matters, and who seem to forget that considerations of finance and exchange require the encouragement of the export trade so far as is possible consistent with war requirements. Now, as regards our allied works, I think I may reasonably congratulate the shareholders on the splendid property they possess in their holding of the Ordinary shares of the Partington Steel and Iron Company, Limited. In the coal trade production has decreased over 10%, whilst wages and the cost of material was largely increased, with the result that our profits are less by one-half of the profits of 1913, and £10,000 less than the profits of last year. There have been numerous discussions over wages, and the miners are now receiving considerable increases in the amounts payable to them before the War. Our trading this year will be affected by the Coal Prices Limitation Bill and by the pre-war contracts having run off, and as for the year under review our profits were barely 6*d.* per ton on the output, we can do well with an improvement. Rylands Brothers' works were for the first half-year of the year affected by pre-war contracts and difficulties in obtaining supplies. The improvement in the latter half of the year had a good deal of leeway to make up, and we have been fortunate in doing so.

As these works are now a munition area, I must not enlarge upon either the nature of the work we do or in what way we are useful to his Majesty's Government. I am sure the Munition Ministry are in good hands, and I only hope we shall be able to keep up to the average of 1913 profits, which we are entitled to keep for ourselves. As a munition area not 50% war tax, as in the present Budget, but 80% of excess profits are taken by the Exchequer, and there is no guarantee against loss or undertaking not to injuriously affect our goodwill.

The Outlook.

Now you may say that you expect me to indicate the probable results of the present year, and this is a difficult question. In the first place, a great deal of our work will arise from employment by the British Government and the Allied Governments. In the next place, if our profits exceed the basis on which we have paid income tax this year, the Exchequer will take one-half of them, and, as I have told you, in the case of Rylands Brothers, which has been included in the munitions area, 80%. And, lastly, there is the uncertainty as regards the War. I am sure you will be the last to complain of the tax on war profits, whether it be, as at present, 50%, or whether it has to be increased to 100%. Sacrifice is demanded all round, and thousands who are shedding their blood are making greater sacrifices than we are; but, barring any unforeseen accidents, I should quite hope that we might reach the basis on which we are this year paying income tax—namely, the basis of 1913, when we distributed a dividend of 8%. I think we should hardly give you as much, because of the necessity of improving our reserves, and what proportion of the 8% you would have to spend as actual cash I cannot tell, as income tax may absorb a large proportion of the profits available for dividend.

Mr. John J. Bleckly seconded the resolution, which was carried unanimously.

A vote of thanks to the Chairman closed the proceedings.

THE MERGUI CROWN RUBBER ESTATES, LIMITED.

THE second ordinary general meeting of the Mergui Crown Rubber Estates, Limited, was held on September 28 at the registered offices of the Company, Nos. 3 and 4 Great Winchester Street, E.C., Mr. J. D. W. Wilson (Chairman of the Company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—The property consists of 2,050 acres, and is held under lease direct from the Secretary of State for India in Council for 30 years from 1911, renewable at the Company's option without additional payment of premium for a further period of 20 years. Rent on 1,542 acres for the first period of 30 years is Rs. 5 per acre per annum, afterwards at an increase not exceeding 50% of the former rent; the balance of the estate is free of rent for eight years from 1911.

The Accounts.

We will now briefly consider the accounts. On the debit side of the balance sheet, representing our liabilities, we will take the capital account, the nominal amount of which is £100,000, capital issued 750,007 shares of 2*s.* each, 750,000 of which being credited as fully paid up, seven shares being signatory shares being paid for in full, and 150,000 shares upon which the sum of 1*s.* has been credited, leaving an uncalled liability of 1*s.* per share (or £7,500), making an issued capital of £82,500 14*s.*, the balance of 99,993 shares, equivalent to £10,000 (less 14*s.*) being held in reserve for future issue if required. I may here state emphatically that the directors have no intention at the present either of calling up the unpaid liability of £7,500 or of issuing any portion of the shares held in reserve. You will observe that the Government of India stands as a creditor for £65,000 (of which the sum of £2,000 has been paid during the period covered by these accounts, leaving a balance of £63,000). This item represents the premium for the lease of the property payable to the Government, it carries interest at the rate of 4% per annum, and it is to be discharged by annual instalments varying in amount according to the average selling price of rubber, or, in other terms, according to the ability of the Company to defray the same. Turning to the credit side, representing the assets, you will notice that the consideration paid to the shareholders of the old Company in shares of this Company was £82,500, which represents the total amount of our issued capital, not counting the signatory shares. In the distribution of the assets and liabilities of the old Company, taken over by this Company, there remained a credit of the sum of £4,185 18*s.* 4*d.* in our favour, which, deducted from £82,500, leaves the sum of £78,314 1*s.* 8*d.*; this sum, together with the sum of £65,000 payable to the Government of India, makes the cost of the estates to this Company £143,314, or approximately £70 per acre for the planted area. In considering this figure it must be remembered that the planted area consists of 1,963 acres, 1,232 acres being in bearing with rubber of eight to nine years old and upwards, and 731 acres immature rubber; of the latter 330 acres are expected to be in bearing next year, and the balance 400 acres in the year following. Although at first sight the cost may appear somewhat high, it must be borne in mind that the debt to the Government of India, viewed in the light of a redeemable Debenture repayable out of the profits, will in the course of time disappear, leaving the actual cost of the estate (so far as capital money raised is concerned) very little more than £40 per acre.

The Rubber Output.

The net yield of rubber for the year was 383,330 lb., against an estimated production of 375,000 lb. The net "all-in cost," excluding interest and war risk insurance, which amounted to 1.30*d.* per pound, was 1*s.* 3.85*d.* per pound, including those items, 1*s.* 5.15*d.* The average gross price obtained was 2*s.* 1.87*d.* per pound, the net profit being 8.72*d.* per pound.

Profit and Loss Account.

The net profit for the year, as per the third division of the profit and loss account, is £13,929 12*s.* 7*d.*, from which, after deducting £2,000 paid to the Government on account of the lease and writing off the whole of the preliminary expenses attending the formation of the Sterling Company, stamp duties in London and Burma, &c., amounting to £1,236 14*s.* 2*d.*, leaves £10,692 18*s.* 5*d.* The directors now propose to pay a final dividend for the past year of 7½%, which, with the interim dividend paid in March last, absorbs £8,250 1*s.* 4*d.*, leaving £2,442 17*s.* 1*d.* to the credit of profit and loss account to be carried forward.

We will now turn to the current year, of which five months have already elapsed. The estimated output for the current year is 400,000 lb., at a cost "All-in Rangoon" of 10.81*d.* per pound, as compared with 11.69*d.* for the past year. With regard to the future, this is "on the knees of the gods," and I do not think it would serve any good purpose to speculate as to what will be the level of prices for rubber during the next year. I would, however, state for your information that your directors have considered it a wise policy, by selling forward a portion of the production, to insure the Company against any wide fluctuations in the price, and to make sure of sufficient working capital to cover

the whole or at least a very large proportion of the cost of cultivation, &c. In accordance with this policy they have made the following forward sales for delivery during the financial year 1915-16—viz., 63 tons first latex, say 141,000 lb., at an average of 2*s.* 2½*d.* per pound, and also for the next financial year, 1916-17, 57 tons first latex, say 127,700 lb., at an average of 2*s.* 3*d.* per pound, which I trust you will consider satisfactory. In order to promote the growth of the trees and provide more light and air this Company has, in company with many other similar undertakings, found it necessary to adopt a judicious system of thinning out, an operation that may at first somewhat interfere with the production, but which will afterwards undoubtedly increase the production of the trees.

Mr. E. Moreau seconded the resolution, which was carried unanimously.

Messrs. Horne, Allan and Company were reappointed auditors.

The proceedings closed with a vote of thanks to the staff in the East and to the Chairman for presiding.

THE BUXTON LIME FIRMS COMPANY, LIMITED.

The annual meeting of the shareholders was held at the Company's offices on Thursday, September 30, Mr. H. A. Hubbersty in the chair.

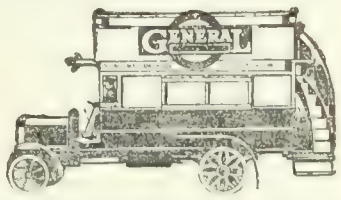
Before the business of the meeting was commenced, Mr. Ryan, the managing director, referred to the great loss sustained by the Company through the death of Colonel A. C. Cantrell-Hubbersty, who had held the position of Chairman of the Company since its incorporation in 1891, and proposed a vote of condolence with the deceased gentleman's family, which was seconded by Mr. R. B. Morten, one of the oldest shareholders in the Company, and carried in silence.

In moving the adoption of the balance sheet and directors' and auditors' reports, the Chairman said that owing to the War the demand for lime for building purposes had practically ceased, and that the general demand for lime was much less than in previous years, but the volume of rawstone trade was well maintained. The War had told heavily on the staff and workpeople, a large percentage of whom had enlisted, and he was sorry to say that a number of them had been killed and wounded. No doubt the shareholders would join the directors in offering sincere sympathy to the relatives of the brave men who had fallen.

A Very Trying Time.

The Company had passed through a very trying time, especially in the first half of the year. They had to face a shrinkage in volume and a constant increase in the costs of production, disorganisation of railway traffic, and a shortage of labour, and he thought the thanks of the shareholders were specially due to the managing director, Mr. Ryan, for the tact and energy he had exercised in organising the Company's resources to such an extent that the directors were able to overcome the serious difficulties with which they were confronted, and to make sufficient profit to enable a dividend to be paid. During the year they had expended out of revenue on repairs and renewals to plant and rolling-stock the sum of £18,052.

Profit and Dividend.



The profit for the year, after providing £7,780 for Debenture interest, and writing off £13,520 for depreciation, amounted to £18,974 1*s.* 2*d.*, which with £9,582 15*s.* 8*d.* brought forward from last year gave £28,556 16*s.* 10*d.* available for distribution. They proposed to declare a dividend at the rate of 6% per annum, which with the interim dividend paid in April made 4½% on the share capital of the Company for the year ended June 30, and absorbed £21,050 2*s.* The balance of £7,506 14*s.* 10*d.* they proposed to carry forward.

The resolution was seconded by Mr. T. H. Cooper and carried unanimously.

The retiring directors, Major W. P. C. Cantrell-Hubbersty and Mr. J. J. Lees, were re-elected, and Messrs. Jno. Adamson, Son and Company, chartered accountants, of Manchester, were re-elected auditors of the Company.

Votes of thanks to the Chairman for his services in the chair, and to Mr. Ryan for his able conduct during the past year, concluded the proceedings.

HUDSON'S BAY COMPANY COMMITTEE.—In accordance with a long-contemplated intention to reduce his business activities, Sir Thomas Skinner, Bart., has resigned his position on the Committee of the Hudson's Bay Company, and his son, Mr. T. Hewitt Skinner, has been elected a member of the Committee in his stead. Mr. R. M. Kindersley has been elected Governor of the Company. Mr. Leonard Cunliffe, having retired from the position of Deputy-Governor, Mr. Charles V. Sale has been elected to that post.

LITTLE COUNTRY WALKS FOR ALL.

No. 7. A TOUR IN KINGSBURY'S MEADOWS.

Alight at the Upper Welsh Harp, and in ning down Cool Oak Lane take the stile on the right, just past the lodge. Follow through the meadows bearing left at divergence paths, out into a tangled track leading, right, into Kingsbury Lane, where turn left to the picturesque Green, with its old cottages, and an inn claiming eight hundred years of existence. Go down across the Green along an elm-shaded lane to a swing gate beside a white fence giving entrance to the fields, which bear straight across to St. Andrew's, of Neasden-cum-Kingsbury, where Mr. Gladstone worshipped when staying at Dollis Hill. Here in the lane turn left, cross the grounds of the Gun Club, and so along Cool Oak Lane again, with the waters of the Welsh Harp for company, out to the Edgware Road. Walk about 3¼ miles.

ROUTE

83. Golder's Green and Hendon (Station Road) (Sundays and Weekdays).
142. Kilburn Park Station and Watford.
167. Charing Cross and South Harrow (Sundays only).
16. Victoria and Cricklewood, connects with Nos. 142 and 167 at Cricklewood.

MISCELLANEOUS.

African Steamship Co.—Interim dividend of 4 , tax free.

Alliance Tea Co., Ceylon.—Interim dividend of 7 , less tax.

Barker (John) and Co.—Interim dividend of 8*d.* per share on Ordinary.

British Canadian and General Investment Co.—Interim dividend at rate of 4 per annum on Ordinary.

Bukit Lintang Rubber Estates.—Final dividend of 30 , making 40%, less tax, for the year.

Bukit Rajah Rubber Co.—First interim dividend of 6%, less tax.

Ceylon Tea Plantations Co.—Interim dividend of 20%, less tax.

Evans (D. H.) and Co.—Interim dividend of 5½ on Ordinary.

Federated (Selangor) Rubber Co.—Interim dividend of 7½%, less tax.

Howard and Bullough.—Quarterly interim dividend at rate of 10% per annum, less tax, on Ordinary.

Imperial Tobacco Company of Canada.—Interim dividend of 1½% on the Ordinary.

Jabez, Johnson Hodgkinson and Pearson.—Dividend of 8% and a bonus of 12% on Ordinary shares.

Kamuning (Perak) Rubber and Tin Co.—Dividend of 15%, less tax.

London and Brazilian Bank.—Interim dividend of 14*s.* per share, less tax, being at the rate of 14% per annum.

London Asiatic Rubber and Produce Co.—Interim dividend of 10% (actual).

London and Provincial Trust.—Interim dividend at rate of 4% per annum, less tax, on Ordinary stock.

Lunuva (Ceylon) Tea and Rubber Estates.—Interim dividend of 5% (actual).

North British Canadian Investment Co.—Interim dividend at the rate of 8% per annum, less tax, on Ordinary.

Rubber Estates of Bentota.—Interim dividend of 5%, less tax.

Sapumalkande Rubber Co.—Interim dividend of 3% (actual).

Galang Besar Rubber Plantations.—Dividend on the Preference and Ordinary shares of the Company of 5%, free of tax.

Straits Rubber Co.—Second interim dividend of 7½% (actual), less tax.

Sungei, Buaya (Sumatra) Rubber Co.—Final dividend of 10%, making 15% for the year.

Union-Castle Mail Steamship Co.—Interim dividend at rate of 6% per annum, tax free, on Ordinary stock.

West of Scotland American Investment Co.—Interim dividend of 4%.

Thom (Alexander) and Co.—Interim dividend at the rate of 5 per annum

Vulcan Foundry.—Dividend of 15% on Ordinary shares for year.

Winterbottom Book Cloth Co.—Interim dividend at rate of 10 per annum, less tax, on Ordinary.

The increase in the income tax necessarily involves many calculations of deductions from future dividends, interest payments, rents, &c., and a number of useful tables are being published with the object of simplifying the work of clerks and others in writing out warrants and cheques. Messrs. Effingham Wilson have issued several tables at the price of 6*d.* each for deductions at rates varying from 1*s.* 8½*d.* to 3*s.* 6*d.* in the £ on sums of 1*s.* to £1,000. The tables also show what would be the gross amount of net dividends of £1, £5, £10, £50, £100, and £500, which should prove useful in claiming remission or exemption from income tax and in making out gross incomes for super-tax returns. Messrs. Edwards and Smith have also published tables on cards showing income tax at 1*s.* 2*d.* to 3*s.* 6*d.* in the £ on gross amounts of 1*s.* to £100,000. These likewise can be obtained at the price of 6*d.* each.

AUSTRALIA
For Manufacturers.

To the British manufacturer with capital Australia offers a remarkable field for enterprise. ¶ Australia's raw material is as varied in character as it is unlimited in quantity. Further, it is cheaply won. ¶ The Australian people are extremely prosperous, and are, in consequence, liberal spenders. Already the Commonwealth is Great Britain's third best market. ¶ But under the Revised Tariff the Australian manufacturer gets a substantial protection. The Australian people are showing a growing preference for home-made goods. The British manufacturer will do well to consider the establishment of branch factories in Australia. ¶ Australia is rapidly filling up her empty spaces. The most pronounced movement to-day is the spread of farming. More farmers mean more production, more wealth and more people—an ever-expanding market. Now is the time for the manufacturer to establish himself inside the tariff.

THE KYSHTIM CORPORATION, LIMITED.

REPORT OF THE DIRECTORS

To be presented to the Shareholders at the Sixth Annual General Meeting of the Corporation, to be held at Winchester House, Old Broad Street, London, E.C., on Thursday, the 14th day of October, 1915.

The Directors present herewith the Sixth Annual Report of the Corporation, together with Statement of Accounts, for the year ending 13th January, 1915.

As at the date of these Accounts (13th January, 1915), the holders of £635,600 Debentures had exercised their rights of conversion, 254,240 shares being issued in redemption of these Debentures. The Debenture and Share Capital of the Company is now as follows:—

SIX PER CENT CONVERTIBLE DEBENTURES.

Issued	£650,000
Lodged up to expiry of option for Conversion into Shares	635,600
Outstanding	£14,400

£1 SHARES.

	Shares.
Original Issue	1,000,000
Shares allotted in Redemption of above Debentures to the date of expiry of option, i.e. 1st January, 1915	254,240
Total	1,254,240
Balance of unissued Shares	5,760

The interests and commission receipts, together with the dividend declared by the Russian Company, are shown in the Income and Expenditure account. The amount standing to the credit of this account has been applied to Debenture Interest, standing charges, general expenses, &c., in London, leaving a credit balance of £302,533 13s. 3d. to Appropriation Account as at the 13th January, 1915. Of this balance, the last instalment of final dividend declared in respect of the year ending 13th January, 1914, absorbed £94,035, and after provision for Income Tax there remains a balance for appropriation of £208,498 13s. 3d.

The Directors recommend a further dividend in respect of the year ending 13th January, 1915, the payment on 1st November, 1915, of 1s. per share, free of Income Tax, to Shareholders registered in the books of the Corporation on the 14th day of October, 1915, and to holders of Share Warrants to bearer. This dividend will require £62,712 and leave a balance to be carried forward of £145,786 13s. 3d.

The large amount carried forward, namely, £145,786 13s. 3d. compared to £6,302 8s. 10d carried forward from 13th January, 1914 is mainly represented by gold and silver residues, the export of which from Russia has been prohibited by the Russian Government. The realisation of these residues, which have hitherto been refined in London, is the subject of negotiations with the Ministry of Finance in Petrograd. The Directors hope that these negotiations will result in an arrangement which will enable them to distribute the profits earned, but not yet realised.

As Shareholders are aware, this Corporation holds the total Share Capital of the Kyshtim Mining Works (a Russian Company); for the information of the Shareholders of the Kyshtim Corporation, Limited, the Reports of the Board of the Russian Company, and Mr. R. Gilman Brown, the Consulting Engineer of the Russian Company, are enclosed herewith, together with a translation of the Balance Sheet and Profit and Loss Account of the Kyshtim Mining Works Company.

Reference to the Report of the Board of the Kyshtim Mining Works Company will show that the trading profit of that Company for the year ending 13th January, 1915, amounted to £367,443, which was allocated as follows:—

	£
To Reserve Fund	18,372
Depreciation	100,000
Reserve for Profit Tax in Russia	38,545
Payment of Dividend	210,526
	367,443

For the purposes of comparison with figures of previous years the rate of exchange has been taken at Rs. 9.5 to the £1, but in view of the present rate of exchange and other conditions this Corporation has valued the dividend to be received from Kyshtim Mining Works Company, Limited, at the exchange of Rs. 11.5 to the £1.

The Directors retiring by rotation, Messrs. A. J. Hugh Smith, Saveli Polak, and T. Blair Reynolds, are eligible, and offer themselves for re-election.

The Directors report with regret the death of their esteemed colleague, Mr. S. J. Blumlein.

The retiring Auditors, Messrs. Deloitte, Plender, Griffiths and Company, offer themselves for re-election.

By Order of the Board,
J. P. B. WEBSTER,
Secretary.

C. F. H. LESLIE,
D. J. MORGAN, } *Directors.*

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE KYSHTIM CORPORATION, LIMITED.

We have audited the above Balance Sheet, dated 13th January, 1915, and have obtained all the information and explanations we have required. In our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given to us, and as shown by the Books of the Company.

5 London Wall Buildings, E.C.
23rd September, 1915.

DELOITTE, PLENDER, GRIFFITHS AND CO.,
Chartered Accountants, } *Auditors.*

The LIST will OPEN on SATURDAY, October 9th, and CLOSE on or before MONDAY, October 11th, 1915.

The Treasury has been consulted under the notification of the 18th January, 1915, and raises no objection to this issue. It must be distinctly understood that, in considering whether they have or have not any objections to new issues, the Treasury does not take responsibility for the financial soundness of any schemes, or for the correctness of any of the statements made or opinions expressed with regard to them.

The permission of the Committee of the Stock Exchange has been granted for dealing in these Debentures.

ABRIDGED PARTICULARS

Messrs. HIGGINSON & CO.

having contracted to purchase

£150,000

SIX PER CENT. FIRST MORTGAGE SINKING FUND EQUIPMENT DEBENTURES.

(Series A.)

Due October, 1, 1930,

offer them for sale at the price of

£98 per Cent.

payable as follows:—

On Application	...	£1 0 0	per Deb. of £20	
On Acceptance	...	£18 12 0	„	„
		£19 12 0	per Deb. of £20	
On Application	...	£5 0 0	per Deb. of £100	
On Acceptance	...	£93 0 0	„	„
		£98 0 0	per Deb. of £100	

Interest payable on April 1 and October 1.
Redeemable on any interest date as a whole or in part on six months' notice by the Company at 105.
Debentures will be issued in denominations of £20 and £100 in bearer form.
Interest Coupons are payable in London at BARCLAY and COMPANY, LTD.

The following information is summarised from a letter from the Chairman of the Company, set out in the particulars to which applicants are referred for full information:—

The business of the Company is to provide and operate Pullman Cars on various Railways in Great Britain. Under satisfactory agreements the necessary cars, attendants, and service are furnished in return for the additional fare payable by the passengers. The service has been in operation since 1882.

These Debentures, Series A, will be secured by a First Mortgage on Pullman cars valued at over £235,000. Further series of Debentures may only be issued for 66 per cent. of the cost of new rolling-stock to be secured by a first charge thereon. All series will be further secured by a floating charge on other assets.

On or before October 1, 1916, and annually thereafter up to and including October 1, 1920, £6,300, and on October 1, 1921, and annually thereafter until maturity of the issue on October 1st, 1930, £12,600 will be applied as a Sinking Fund for the redemption of the present issue, either by drawings at 105 or by purchase at or below 105. This Sinking Fund will be sufficient to retire the entire issue by maturity.

After providing for all interest and Sinking Fund requirements all nett profits must be carried to a Special Reserve Fund until such Reserve Fund reaches £25,000. Thereafter at least 20 per cent. of net profits must be carried to such Reserve Fund until this Fund is equal to the total amount of the Debentures outstanding including future issues. Not more than Six per cent. annual dividends may be paid on the Share Capital until the Special Reserve Fund amounts to £50,000.

The Company has recently installed Third-Class cars between London, Brighton, and Eastbourne, and the contemplated extension of this service is expected largely to increase earning capacity.

Earnings are received in cash taken daily on the cars or by the railways on behalf of the Company. The bulk of the revenue is derived from fares payable by passengers using the cars, and only a small proportion from the Company's restaurant service. Nett earnings, before depreciation, but after charging all renewals and maintenance for the last four years, have been as follows, as certified by the Auditors, Messrs. W. B. Peat & Co.:

For the year ending 30th June,	1912 ...	£17,788 19 10
„ „ „	1913 ...	21,568 8 4
„ „ „	1914 ...	22,008 19 10
„ „ „	1915 ...	14,342 6 11*

*It will be noted that earnings for the last year show a considerable diminution, which is accounted for by the running of the cars having been temporarily suspended under Government necessity at the outbreak of war. In consequence, for the three months, August, September and October 1914, the Company's profits totalled only £713 10s. 9d. (approximately). Since November 1st, 1914, normal working has to a large extent been resumed, and earnings have shown a steady improvement from month to month.

Average annual earnings as above for the past three years amount to	£19,306
Interest charges upon this issue amount to ...	£9,000
Leaving a surplus of	£10,306

available for Sinking Fund, depreciation, etc.

During the last eighteen months new cars costing £76,000 have been delivered, and this new rolling-stock, together with the inauguration of third-class services, is expected largely to increase earnings which are conservatively estimated for the year 1915-1916 at not less than £25 000.

For the two months and a half ending September 15th, 1915, the earnings were £6,170 9s. 4d. (approximately), or at the rate of nearly £30,000 per annum.

An independent examination and valuation of the Company's rolling-stock has been made by the instruction of Messrs. [illegible] Mr. W. C. Sparks, Managing Director of the Metropolitan Carriage, Wagon and Finance Company, Limited, [illegible] of the rolling-stock [illegible] the Pullman Company, Limited [illegible]

CONSOLIDATED MAIN REEF MINES AND ESTATE, LIMITED.

INCORPORATED IN THE TRANSVAAL.

DIRECTORS' REPORT for the Year ended June 30, 1915, to be submitted to the Seventeenth Ordinary General Meeting of Shareholders, to be held in the Company's Board Room, Cullinan Building, Johannesburg, on Friday, November 26, 1915, at 11 a.m.

To the Shareholders,
CONSOLIDATED MAIN REEF MINES AND ESTATE, LIMITED.

Gentlemen,—Your Directors beg to submit their Report, together with the Reports of the Consulting Engineer and General Manager, as also the Financial Statements for the year ended 30th June, 1915.

PROPERTY.—With the exception of the sale of the freehold of certain stands in the Maraisburg Township, there has been no change in your Company's property holdings since the last General Meeting.

MINING OPERATIONS.—The Reports of the Consulting Engineer and General Manager give full details of the work accomplished during the year under review.

The tonnage crushed during the year shows an increase of 53,759 tons, with a corresponding improvement of profit earned of £21,656.

The payable Ore Reserves show an increase from 693,460 tons, valued at 7.34 dwt. over 48.6 inches, to 855,600 tons, valued at 7.53 dwt. over 48.5 inches.

FINANCIAL.—The Appropriation Account may be summarised as follows:—

Credit Balance brought forward from previous year ...		£55,423 3 1	
Profits earned during year ...		128,265 7 3	
Owners share of Claim Licences, Interest and Sundry Revenue		9,674 19 3	
		£213,363 9 7	
From which have to be deducted:—			
Government Tax on Profits for previous year ...	£9,561 12 0		
Audit Fees for previous year ...	315 0 0		
		10,276 12 0	
Shaft Sinking	9,470 16 5		
Dividends Nos. 13 and 14 declared during the year ...	115,545 10 0		
Directors' extra remuneration in accordance with the Company's Articles of Association	1,700 0 0		
Contribution to Miners' Phthisis Compensation Fund	5,324 4 6		
Sundry Items	1,172 5 5		
		133,212 16 4	
			143,489 6 4
Leaving a balance to be carried forward of ...			£69,874 1 3

The following items of Capital Expenditure have been incurred during the year:—

Buildings			1,789 15 8
Machinery and Plant			11,385 16 9
Shafts			19,973 0 3
Furniture			17 10 0
Stable Equipment			11 11 10
Dams and Surface Works			309 15 6
Less—			
Proceeds of sale of Freehold Stands in Maraisburg	£260 0 0		£33,497 10 0
Investments sold	25 15 0		
		285 15 0	
			£33,211 15 0

Of this total a sum of £9,470 16*s.* 5*d.* has been written off against the year's profits, the remainder being provided from the funds secured under the amalgamation scheme in 1909, the balance of cash available from this source being at 30th June, 1915, £16,379 19*s.* 2*d.*

DIVIDENDS.—On the 31st December, 1914, your Directors declared an interim dividend (No. 13) of 1*s.* 3*d.* per share (6¼ per cent.), for the first half-year, and on the 30th June, 1915, a dividend (No. 14) of 1*s.* 3*d.* per share (6¼ per cent.) was declared for the second half-year, making 12½ per cent. for the year. You will be asked to confirm your Board's action in the matter.

DIRECTORATE.—In accordance with the Company's Articles of Association, all the members of your Board retire from office, but, being eligible, they offer themselves for re-election. The retiring Directors are Messrs. W. H. Dawe, C. S. Goldmann, A. A. Auret, J. H. Ryan, A. G. Gill, E. A. Wallers, F. R. Lynch, H. J. King, E. J. Renaud, and W. H. B. Frank.

AUDITORS.—The retiring Auditors, Mr. J. P. O'Reilly and Messrs. A. Aiken and Carter, being eligible, offer themselves for reappointment. You will be asked to appoint Auditors for the current year, and to fix the remuneration for the past audit.

We are, Gentlemen Obediently yours,
W. H. DAWE, *Chairman.*

A. G. GILL, M. HONNET,
O. SCHEUERMANN, F. R. LYNCH,
J. JOURDAN, J. EMRYS EVANS, *Directors.*

W. ROCKEY,

Johannesburg, 27th August, 1915.

CONSULTING ENGINEER'S REPORT
For Year ended 30th June, 1915.

The Chairman and Directors, CONSOLIDATED MAIN REEF MINES AND ESTATES, LIMITED, JOHANNESBURG.

Dear Sirs,—The details of the last twelve months' milling operations compared with those of the previous year are as follows:—

Year.	Tons Milled	Total Yield.	Yield per ton Milled	Cost per ton Milled.	Profit per ton Milled.	Total
1914	241,007	£379,551	31*s.* 5·96*d.*	21*s.* 9·84*d.*	9*s.* 8·12*d.*	£116,609
1915	294,766	442,649	30*s.* 0·41*d.*	20*s.* 7·83*d.*	9*s.* 4·58*d.*	138,265

There was an increase of 53,759 tons milled and of £63,098 in the total yield; a decrease of 1*s.* 5.55*d.* in the yield and of 1*s.* 2.01*d.* in the working costs per ton milled, or a decrease of 0*s.* 3.54*d.* in the profit per ton milled, and an increase of £21,656 in the total profit, as compared with the previous year.

The increase in the tonnage milled and the total profit is due almost entirely to the larger number of native labourers available throughout the year. The average number of natives employed underground was 1,675, as compared with 1,442 during the previous year, and the percentage of rock broken in the stopes by machines was decreased from 60.6 to 58.6 per cent.

A total development footage of 18,882 feet was accomplished, showing an increase of 3,872 feet; and, omitting shaft sinking, station crosscuts, and ore chutes, the footage driven, crosscut, raised, and sunk, amounted to 17,405 feet, an increase of 2,977 feet.

The driving done on reef and in country was 11,105 feet, an increase of 3,326 feet, this being an enormous footage for a mine which milled a little less than 25,000 tons per month. During the year 382,620 tons of an average value of 7.85 dwts. over an estimated stoping width of 48.5 inches were developed, thus showing an increase of 144,140 tons and an improvement in the average of 0.23 dwts. per ton over the exposures of the previous year.

The ore reserves are estimated to be 855,600 tons of an average value of 7.53 dwts. over a stoping width of 48.5 inches, an increase of 162,140 tons, and also an increase in value of 0.19 dwts. per ton.

Eastern South Section.—The increased development footage has been accomplished entirely in this section of the mine. The total footage done was 9,112 feet, an increase of 5,466 feet, and, omitting shaft sinking, station crosscuts, and ore chutes, the total footage driven, crosscut, raised, and sunk, was 8,118 feet. Almost the whole of the driving has been done on Main Reef Leader, for the South Reef exposed in a few places in this section has shown disappointing values.

Main Drives.—The reef exposed in these drives gave satisfactory values. Of 4,403 feet driven on the Main Reef Leader, 4,200 feet was sampled, and gave an average value of 8.2 dwts. over an assumed stoping width of 48 inches.

East Drives.—The values exposed in these drives on the Main Reef Leader were disappointing. The reef in the Eastern drives is much more broken by dykes and faults than in the West, and, of 2,044 feet of driving, only 1,325 feet was sampled. Of this length, 465 feet gave an average value of 9.7 dwts. over an assumed stoping width of 48 inches, and the remaining 860 feet gave quite unpayable values.

Considerable progress has been made in the cutting of the engine chamber, &c., for the Subsidiary Incline at this shaft, and, before the close of this year, this work will be finished. It will be possible during this year to sink this Incline to the 27th, and to accomplish some development on the 26th level.

Given a continuation of the present labour supply, the rate of profit earned during the past year should be maintained during the ensuing year.

Yours truly,
D. WILKINSON, *Consulting Engineer.*

Johannesburg, 1st September, 1915.

MONEY.

October dividend payments and the maturing of 15 millions' worth of Treasury bills increased the supply of short money available, but made little difference to rates, owing to the success with which the market is maintaining the regulations that it has imposed on itself in order to keep up the price of credit. On one or two days loans over the night were said to have been arranged at below 3½%; but these were only exceptional transactions with moneylenders outside the circle of the self-denying ordinance. In ordinary times the payment of the dividends and such a maturity of Treasury bills, happening together, would have flooded the market with unusable credit and had a depressing effect on discount rates; but in these days the market is under strict military discipline and knows that it must do all that it can to keep steady. This it does with considerable success, having been stimulated in its effort by the evidence, given at the end of September, that, in spite of the bloated figures of the other deposits in the Bank return, the available surplus of cash is not nearly as great as might be supposed, according to the old-fashioned measures of the market's resources, according to which stringency was only expected to begin when the other deposits fell to the neighbourhood of 40 millions.

Another influence that has kept discount rates steady, in spite of the big gap made in the supply of bills, was the news that a big credit has been arranged for Russia by means of acceptances to be granted by English banks and accepting firms. The credit is described as commercial, and so is presumably granted to supply exchange for private Russian traders who have payments to make in England. The bills are to be drawn by Russian banks, and the repayment of the credit is to be guaranteed by the deposit of Russian Treasury bills payable a year after peace. This item in the programme has been criticised to a moderate extent among those affected who have a healthy prejudice against a liability or an asset (and this arrangement involves both) which is indefinite in the matter of date; but it is recognised, of course, that any attempt to improve the position of the Petrograd exchange is to be welcomed, and that the terms and conditions must not be scrutinised in a carping spirit. An interesting feature of the arrangement is the fact that the credit is to be given by the clearing banks and private firms, and not by the Bank of England. This, no doubt, was done with a view to avoiding the inflation that inevitably follows when the Bank of England makes advances, and thereby increases the supply of what moneylenders describe in their balance sheets as cash and use as the basis for a still larger amount of bookkeeping credits for their customers.

As it is, a certain amount of inflation will be involved by the arrangement, since the credit given will be based not on the shipment of goods, but on the deposit of promises to pay some day. A mass of finance paper will thus be created, increasing the amount of available banking currency, and so tending to raise prices and depreciate the value of the sovereign in other centres. Russia's circumstances are so exceptional, with her two chief channels of export closed, that a certain addition to current inflation may well be suffered in order to assist her. But that is all the more reason for reducing, by all means possible, the extent of inflation due to other causes. It is therefore very satisfactory to note that the Bank of England's holding of securities has been further reduced by 13 millions, as shown by the return issued on Thursday. Its total holding of securities is still at a quite abnormal level—150½ millions, against 60½ on July 1, 1914. We hope to see this 90 millions excess rapidly and steadily reduced, since it produces a state of affairs in the Money market which is decidedly adverse to the national interest.

When the nation is engaged in a war of such enormous magnitude, it is above all important that the power of the people to compete against the Government by extravagant purchases of goods and services should be strictly limited so that prices may be kept down. It is also of very great importance that the exchanges should be kept as favourable as possible. Both these desirable ends are made difficult when the Bank of England, by holding securities to an abnormal extent, manufactures credit and so multiplies buying power in the hands of the public, and at the same time, by increasing the mass of our bookkeeping currency, helps to turn the exchanges against us. For the success of the Indian closing of mints, in raising the value of the rupee, has shown very clearly how close is the connection between the volume of a country's currency and its exchange value into those of other countries. The increase in deposits, due to the increase in the Bank of England's securities, has exactly the same effect as the issue of a mass of uncovered bank-notes. It increases the currency and makes it less valuable for exchange into dollars or any other form of foreign money.

Reduction of consumption is, of course, the chief remedy for adverse exchanges, but reduction of inflation is almost equally salutary, especially as it would assist the reduction of consumption. The problem is a serious one, as is shown by the huge adverse balance in the month's trade returns and by the very slight effect on the American exchange produced by the satisfactory conclusion of the loan negotiations. We pointed last week to the likelihood of the need for higher rates here, and the events of the week, involving the probability of a widening of the area of war and an increase in the number of Allies requiring military and financial assistance, have shown that every effort must be made, and made soon, to repair weaknesses in our financial armour.

BANK OF ENGLAND.

Only once since the commencement of the War has so much money come out of the public deposits as that shown in this week's Bank Return—viz., £34,841,465. The market also benefited to the extent by £656,097 through the payment of the dividend on Bank stock. Altogether the market received approximately 30½ millions. The principal outgo was 13 millions, represented by a decrease in the other securities, which now amount to £119,266,000, as compared with more than £192 millions at the end of July last. The reserve is £836,000 down, but on balance £21,613,000 was added to bankers' balances or "other" deposits. The loss of £836,000 in the reserve was due to an efflux of £1,008,000 in gold, offset by a return of £248,902 from the country, whilst the note circulation was practically unchanged. Thanks to the considerable decrease on balance in deposit liabilities, the ratio has risen more than 1¼% to 26.06%, a higher proportion than at any time since the end of February.

POSITION IN NEW YORK.

The last return of the Associated Banks and Trust Companies showed an addition of £8,762,000 to the loans and discounts, which now stand at £555,638,000. There was an increase of £7,388,000 in the public deposits, which now amount to £591,940,000. The surplus reserve is £3,172,000

down, owing to a falling-off of £1,556,000 in the actual reserve held. Notwithstanding the satisfactory arrangement of the Loan, the sterling exchange is slightly lower.

The following rates of exchange are current in New York:—

New York on—			Rate Oct. 7	Par as usually quoted	Discount %
London	...	sight	$4 70	4 86¼ dollars for £1	3·4
,,	...	cables	$4 70½		
,,	...	60 days	$4 68		
Amsterdam	...	sight	40¼c.	40¼ cents for 1 guilder	Prem.0·6
Berlin	...	sight	82½c.	95 cents for 4 marks	12·7
Paris	...	sight	5 80fr.	5.18 francs for $1	11·9
Mexico	...	Mex.silver $	38½c. U.S.	50c. U.S. for 1 Mex. $	23·0

Rates for prime commercial paper and for call loans in New York are as follows:—

Oct. 7, 1915	...	Prime paper	... 3-3½%	Call money	... 1½%
Oct. 8, 1914	...	,, ,,	... 6½-7%	,, ,,	... 6-8%

POSITION IN INDIA.

The applications for the 50 lacs of Council drafts on Wednesday last were considerably smaller. The rates accepted were the same, but applicants got 20% of the amount applied for, as compared with 10% at the previous allotment. A return of the Currency Department made up to September 30 shows an expansion of 67 lacs in the note circulation, the total of which now amounts to 6,380 lacs. The increase was represented by an addition of 66 lacs to the silver reserve, which has risen to 3,774 lacs, whilst the gold in India is one lac higher at 591 lacs.

The following are the minimum Rates of Discount current in India:—

Bombay ... 5 per cent. (June 2, '15) | Bengal ... 6 per cent. (Sept. 24, '15

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, October 6, are:—

The following Special Sales have since been made:—

	Rs.	At
Bills on Madras	10,000	1/4 3/32

From April 1 to October 5 inclusive the Council granted remittances for Rs. 5,37,85,297, realising £3,584.594. Up to October 6 of last financial year the total Bills and Transfers sold was Rs 5,01 5 r 861 realising £3,747.072. The total sales for the week ended October 5 amounted to Rs 64,11,362, realising £428,146. The amount to be offered for tender next Wednesday will again be 50 lacs.

SILVER.

The London Silver market continues strong, and to-night's price of 23 15/16d. is the highest touched since March 16 last. There has been much complaint of the dearth of silver in the country, and it is understood that the Mint has been requested to increase the coinage as rapidly as possible. There has been very little business for the Far East, but brokers report some inquiries for the Continent.

Rubber Plantations Trust.—We would call attention to the report of the meeting of this Company given elsewhere. This week the shares have ranged at about 9*s.*—a price which looks extraordinarily low having regard to the Company's possibilities. In the course of his remarks the Chairman stated that the shares had, in his estimation, a value of between 19*s.* and 20*s.*

Stock Exchange.

Settlement of pre-War open position deferred to a year after peace declaration.—*Vide* Emergency Rules as to conditions.

	Ticket Day.	Pay Day.	Consols.
Settlement Days	Wed., Oct. 13	Thurs., Oct. 14	Fri., Nov. 5

In The Statist of September 11 we referred to the retention of the archaic practice of transferring Government, &c., inscribed stocks. Not till provision was made in the Finance Act of 1911, Section 17, had there been any other system of transfer than by personal attendance either of the inscribed holder of the stock or his attorney. But very few of the multitude of holders of Government, &c., stocks are aware of the provisions by which they can elect to change from the form of inscribed to a registered stock, by the filling up of a "document for registration." The Liverpool Chamber of Commerce under date September 20, addressed a letter to the Chancellor of the Exchequer upon this subject advocating the discontinuance of the "antiquated and inconvenient" practice with regard to inscription, and further proposing that the transfer should be effected by deed in a similar manner, as, for example, by the London and North-Western and other British railways; and, as with the railways, that there should be the issue of certificates by the Bank of England to be surrendered when transfers by deed are effected. The suggestion is further made that the deeds should be free of transfer duty, but that 1*s.* per share fee be charged for sums under £100, and 2*s.* 6*d.* fee for sums over £100 nominal. In a word, it suggests a change of procedure so as to render the registration of transfers by deed and certificate normal and the present "inscribed" method abnormal.

At March 25, 1914, the *personnel* of the Stock Exchange was about 4,850 members and some 2,400 clerks having the *entré* of the "House." A large number of both members and clerks have in one way or another put their services at the disposal of the country, some 960 members and nearly 900 clerks thereby securing the right to accept the exemption from paying subscription for the current year; there have also been resignations, deaths, &c., and, further, over 500 members have elected to take a year's "holiday." The loss of subscriptions consequently has been very large. Heretofore the practice has been to declare an interim dividend of £4 per share at about this time of the year, and the final dividend in May (the official year ends March 25). Consequent on events the trustees and managers intimate that this year there will be no interim distribution. Recent dividends per share of £13 have been:—

	1915-16	1914-15	1913-14
		£	£
Interim	Nil	4	4
Final	—	3	6

In the general Stock markets price movements have not been of any consequence, and the discomforts of the situation in the Near East have not been reflected to any great extent in market movements. Government issues have been remarkably steady, War Loan showing a small appreciation compared with a week ago. There continues a mild amount of speculative investment in rubber and tea shares, both markets being affected by the respective commodity prices. Appreciation in the price of rubber has been gradually going on, and we have now the standard description of plantation rubber in the region of 2*s.* 6*d.* per pound. It should be noted that in years of falling prices for rubber companies exerted every effort to reduce costs, which are now at a very low level with well-managed companies; and now the price of rubber is on the upward grade, working costs, fortunately, do not move sympathetically.

Mining Topics.

In the main movements, and these but small, have been confined to copper shares. Notwithstanding the evidence of the shrinkage in profits of the Rio Tinto Company the price remains firm, and this has been contributed to by the declaration of an interim dividend elsewhere referred to. The principal movement has been in American companies, which are doing remarkably well. The price of copper has this week again hardened, being now quoted at about £72. There was a sharp recovery in the price of tin on a rumoured export tax, but subsequently there was reaction, a small improvement on balance being shown.

The South African section has presented an uncertain appearance. The main interest continues to be confined to the Eastern Rand group, and prices have been fairly steady, but, as a rule, an easing tendency has been shown.

Miami.—In dealing with the return of this Company for the six months to June 30 we pointed out that the profits for that period were equal to nearly four times the amount of the 50 cents dividend declared May, and paid for the March quarter. In August, however, on behalf of the June quarter, a further dividend of 75 cents was declared, and it is just announced that the distribution for the September quarter is increased to $1, making a total distribution so far for the year of $2.25 per share, and on this pleasant news the London quotation of the $5 share advanced to £7, a rise in a little over a year of 2¾. It may be, too, that there are grounds for the rumour that the Anaconda Company is preparing to absorb the Arizona areas of the Miami and adjoining Inspiration copper properties.

Rio Tinto Dividend.—This week an interim dividend of 20*s.* has been declared on the Ordinary capital. A year ago the Company, consequent on the War, did not pay any interim dividend. The contrast of dividends and amounts since January 1, 1912, is given below:—

Dividends on Ordinary £5 Shares.

	Per Share— Interim	Final	Total Dividends Amount	Carried Forward
			£	£
1912	40/0	50 0	90/0 1,687,500	194,596
1913	40/0	35/0	75 0 1,406,250	185 872
1914	Nil	35/0	35/0 656,250	162,439
1915	20/0	—	— ½-yr. 375,000	—

MODDERFONTEIN B.—II.

LIFE AND VALUATION.

Last week we gave a record of the progress made at the Modderfontein B mine, and concluded with an estimate of the 1915 results based on the use of 500,000 tons for the year. On conservative lines we estimated a dividend of 75% with a fair balance in excess. We reserved till this week a consideration of the life of the mine and valuation of the share, and we give below the life estimate.

One has to take into account that much has yet to be ascertained as to the nature and the value of the reef in the Company's unexplored portion of area. In view of the probability—certainly as to the eastern area—of disturbed ground, possible dykes and poor zones, it seems reasonable to reckon on approximately one-third, or, say, 30% of the aggregate 1,400 claims as having to be eliminated, and, allowing this proportion for possible faulted country, the 1,400 Modder B reef claims, less 420 claims assumed as non-payable through faults, &c., would leave 980 net reef claims. Taking 14 degrees dip, a stoping width of 54 inches, and about 12% sorting, would mean, say, 21,730 tons per claim. The following result is shown:—

	Tons
Say 980 net reef claims at 21,730 mill tons per claim ...	21,295,400
Used to December 31, 1914	1,295,400
Remaining at January 1, 1915	20,000,000

In the calculations as to the reef contents of the B area, estimates are only based on the Van Ryn reef, but the existence of the South or Modderfontein Reef has not only been disclosed in the Geduld and Modderfontein Deep bores, but also in the north-west corner of the Modderfontein Company's own ground. This point of existence of a parallel South Reef may have an important bearing on the future, under the circumstances of low working costs.

Life.—Dividing an estimated, say, 20,000,000 mill tons by, say, 540,000 tons per annum to be used, some 37 years' life for the Modderfontein B Company is shown.

We conclude with the attempt to estimate, conservatively, a valuation of the Company's £1 shares, which are at present quoted in the region of 5½. If it be assumed that an average of 75% dividends will be paid during a life of 37 years, the present value of the share, assuming that out of dividends the investor appropriates enough to pay him 10% on his investments and sets aside excess dividend to a sinking fund to redeem his capital at the end of the life, works out at £6 13*s.* 6*d.*

We would call attention to the conservative nature of the 75% dividend estimate, because it is based on the use of only 500,000 tons per annum, whereas the capacity of the plant is in course of being extended

to 540,000 tons a year. One reason for our conservatism is that the Modderfontein B is not so favourably situated as the Modderfontein proper. The older Company is surrounded on the dip of its reef by areas that have been proved to be rich—to the west the Van Ryn Deep, to the south the Modderfontein Deep, and to the east the Modderfontein B. With the Modderfontein B, to the east, at all events, the outlook is an uncertain one, and the showings far distant to the south, both in respect of the Government Areas and Geduld. are nothing like of such pleasant character as are those of the western and southern areas bordering on the New Modderfontein. There is quite a probability that as an average for the estimated life of the Modderfontein B the dividends may be in excess of the 75%, but it would be unwise to build up optimistic views on a higher average dividend.

There is one other circumstance beyond the existence of the parallel reef referred to that must not be ignored. To the east of the Company's area there is a considerable extent of ground over which the Company owns the surface rights, and to which at present no mining rights attach. There is the possibility that the Government may enter into an arrangement for the Modderfontein B to work this area on defined conditions, and this, of course, would mean a prolongation of life; but it is sufficient for present purposes to take the valuation on the above basis.

Financially the Company is in very comfortable circumstances. At June 30, 1915, cash and gold in hand amounted to £478,314, against which creditors figured for some £323,000.

Market Price of £1 Shares. Capital, £700,000.

GEDULD'S EXTENSION POLICY.

We briefly referred last week to the decision come to by the directors of this Company to increase the total capacity of the plant to 40,000 tons a month. At the present its capacity is about 26,000 tons monthly, and on the actual results of eight months of 1915, and estimating about the same rate of profit for the remaining four months, the outlook is that the total for 1915 will show something over what would equal a dividend of 12%; 5% was declared on account in June last.

It is known that when the present mill was planned provision was made for convenient and economical additions. How long it will take to increase the plant from the capacity of 26,000, as at present, to 40,000 tons a month is a moot point in the present circumstances; but when the plant is enlarged to deal with 40,000 tons a month it is interesting to take note that on 30*s.* extraction and 19*s.* working costs, giving a mine profit of 11*s.* per ton, the clean profit, after taxes, &c., available for dividend would equal over 20%. It is also worth noting that an increase of 1*s.* per ton in the extraction plus a reduction of a like amount per ton in the working costs, would raise the profit on 480,000 tons a year to an amount to give a dividend of 25%, as each shilling per ton saved in costs or increase in grade is equal to about 2½% dividend on the £970,000 of capital. The costs of this Company have been high in the past, and even at the 19*s.* taken above are approximately 4*s.* per ton higher than those of the Modder B, whose property lies to the north of the Geduld.

The Geduld mine area is so large—2,480 claims—that a long life is certain. Even if one assumes a deduction of one-half the claims, as subject to disturbance, unpayable zones, supporting pillars to be left, &c., we roughly calculate that the use of 480,000 tons a year on the enlarged plant basis would mean a life of well over 50 years—nearer 60 perhaps.

Geduld Proprietary.—The capital authorised is £1,000,000; issued, £970,000, in £1 shares. Plant has been enlarged to 60 stamps and five tubes, having a capacity of 26,000 tons a month. Increase of plant to 40,000 tons a month was decided on on October 1, 1915. Such increase is expected to become operative late in 1916.

(*b*) Reduced profit due increased costs, owing shortage labour and return to more normal recovery. Grade April and May abnormally high.
(*c*) Return states "yield recently has been higher than that called for by the ore reserves."
(*d*) Decreased profit due to temporary falling off in stope values.

Far Eastern Rand.—A cable from the Johannesburg correspondent of the *Financial Times* reports that the Rand Mines has purchased 951 claims on farm Vogelstruisbult 36, south of the farm Daggafontein, which it adjoins. In 1912 the East Rand Trust was formed with a capital of £25,000, in £1 shares, 5,000 of which were offered for subscription, to acquire "some 951 claims on the farm Vogelstruisbult No. 36," and apparently it is these same claims that the Rand Mines

has now secured. Further south, apparently in the north-west corner of Vlakfontein and in the north-east corner of adjoining Grootfontein some areas have been secured by the Consolidated Gold Fields. The farm Vlakfontein used to be owned by the Lydenburg Gold Farms, which held 19 farms in this region as well as ground in other areas. It is interesting to note that the Rand Mines has increased its interest in the Eastern Rand region, while the Consolidated Gold Fields, though somewhat late in the day, has taken a first interest.

NOURSE MINES.

THE report of the Nourse Mines for the year to June 30, 1915, is not an exhilarating document, despite the augmentation of the quantity of ore reserves by adopting, as to Main Reef Leader and South Reef, a greater stoping width, an increased tonnage being gained at the expense of a reduction in the grade. The ore reserves contrast as under:—

1915 Tons	Value s. d.	1914 Tons	Value s. d.
2,952,400	... 25 11	2,473,700	... 26 10

For 1914-15 there was an increase of some 62,000 tons crushed, which gave about £25,000 addition to the gross revenue, but with the set-off of a small saving in expenses the profit per ton was only 5*s*. 3*d*., against 7*s*. 1*d*. for 1914.

It is clear, from a contrast of the extraction results of the last 10 years, that the mine is becoming poorer. In 1906 the extraction secured was 36*s*. 9*d*., while in 1915 it was as low as 26*s*. 3*d*. It is of no use to compare the appropriations of 1915 period with a year ago, as the statement for 1914 was obscured by suspense items, and in the statement below we give the mining results only:—

Year to June 30 1915	£	Per Ton	1914 £	Per Ton
Gross revenue ... (602,110 tons)	783,481	26/3	(5[illegible] tons)	26/4
Expenses	683,488	21/0	572,284	21/5
Mine profit	99,993	5/3	142,226	5/1
Sundry revenue, &c....	8,770			
	166,813			
Amount for redemp... £12,000				
Interest, &c. £1,000				
Taxes £2,000				
Debentures ... (15[illegible])	1[illegible],487			
Sundries ...	16,326			
Profit for year ...	50,[illegible]			
Balance carried forward ...	112,895			

Not improbably the further diminished grade was contributed to in 1915 by the inadequacy of native labour early in the year and the increased use of rock drills in stoping. A considerable proportion of the work was from the South Nourse main incline shaft, which has now been carried to well below the 24th level.

Nourse Mines.—Issued capital £827,821, in £1 shares. Mill, 260 stamps, 7 tube mills, making [illegible] about 58,000 tons for the month.

Year ended June 30	Tons Sorting Milled	Revenue Amt	Revenue Per ton	Expenses Amt	Expenses Per ton	Profit Amt.	Profit Per ton	Price of £ Period

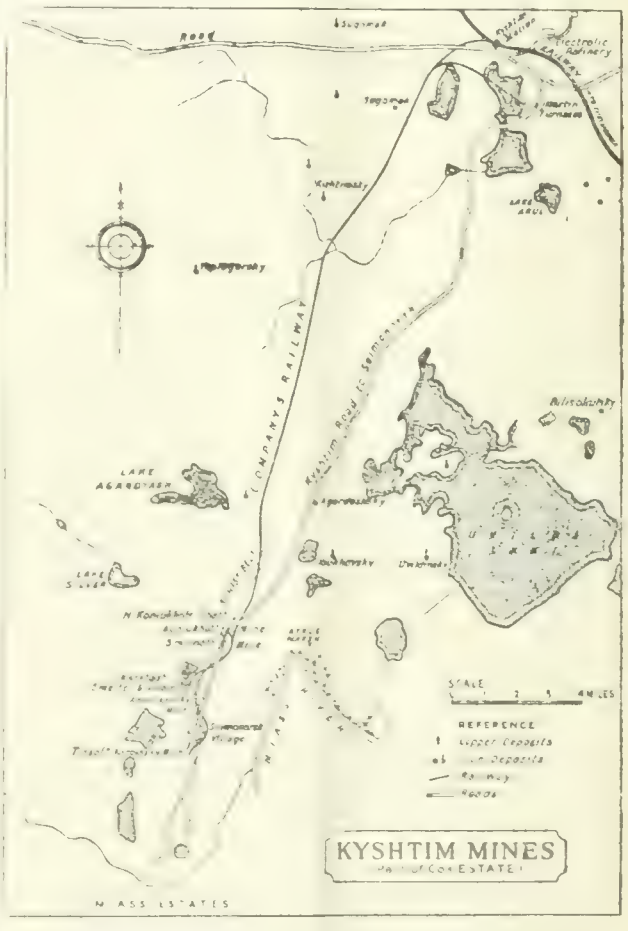
Monthly profits realise revenue from accumulated stimes.

Dividends—1914, June [illegible]; Dec., 8½ per cent.
1915, June 5 per cent.



KYSHTIM CORPORATION.

THROUGH its ownership of the capital of the Kyshtim Mining Works Company, a Russian undertaking, the Kyshtim Corporation, Limited, an English-registered concern, formed in October 1908, acquired, in two blocks of ground, some 1,400,000 acres of mineralised and forestal property, included in the total being some 840,000 acres of timber land, over which the Russian Company has sole right, both as to local consumption and export. Very speedily after the formation of the English Company development of copper-bearing area was succeeded by the production stage, and the output of copper by the year 1913 had reached very close to 8,000 tons. The plant for dealing with the ore is designed to have a capacity of producing 10,000 tons of metal per annum, and would deal with this amount if present circumstances permitted.

The events of 1914 marred progress, bringing down the output for the year to 7,588 tons; but the report of the Company just issued sets out that if the progress of the first six months of 1915 is continued the output for the year may reach 8,800 tons, but this is only put forward as a possibility, and not a probability.

The existence of both iron and copper in the area was known of for a great number of years, and in the early history of the property, prior to its control being secured by English interests, but little attention was given to copper area, the main effort made being to utilise the high-class iron ore deposits. The occurrence of the War has, this year, given a fillip to the iron industry, but both the iron and copper sections have been hit through the restricted supply of labour, so many hands having been called to the Colours.

It will be of interest to repeat the plan we gave in our description of the property on July 11, 1914, such plan still holding good excepting that it does not show the position of the Ivanhoff discovery, which is about two miles north of the river.

We would remind our readers that the aggregate area is divided into two sections—western and eastern. At the southern portion of the eastern area there is a long stretch of copper-bearing schist formation, and payable ore deposits have been exposed at points along the line of the schist formation. In a direction from north to south to late in 1912 there had been discovered what are termed the Koniukhoff, south thereof the Smirnoff, and still further south the Tissoff-Karpinsky, while very late in the year there was added the Amerikansky to the other ore bodies. About the end of 1913 yet another ore body, the Ivanhoff, midway between the Tissoff "Mine" and the river at southern boundary, was discovered. The earlier-named properties are all copper propositions; the Ivanhoff, however, is a deposit of oxidised

barytic ore, not containing payable copper contents—at all events as to surface. It is used as fluxing ore, and is important from its gold contents, the ore containing an average of approximately 1 oz. to the ton.

The Koniukhoff mine has been developed down to the 5th level, the Smirnoff to the 4th, the Amerikansky so far to the 200-foot level, and the Tissoff to the 4th. Shareholders who have received the report, if they turn to the Kyshtim Mining Works Company's report of developments, &c., will find at pages 8, 9 and 10 some interesting information concerning the showings at the different deposits above referred to. The four copper mines in work have disclosed ore of an average width of 11.7 feet and average contents of 2.79% of copper, also varying quantities of gold and silver. Borehole tests have also been effected, to which reference is made in the report at pages above mentioned. We may, however, give some of the more recent developments and some of the boring features:—

Developments

	Length Driven	Average Width Feet	Contents Copper %
Koniukhoff—			
4th Level	1,100	11.5	2.72
5th ,, (so far)	750	13.2	2.98
Smirnoff—			
3rd Level	1,700	11.4	2.18
4th ,, (so far)	750	15.3	2.04
Amerikansky—			
2nd Level (so far)	400	11.9	3.94
Tissoff—			
3rd Level	800	11.9	2.68
4th ,, (so far)	450	12.5	3.09

As to bores, the showings at depth are given as:—

	Vertical Depth Feet	Ore Width Feet	Contents Copper %	Gold Oz.
Koniukhoff—				
Bore 23	970	10.2	3.64	.23
,, 24A	1,315	6.3	4.3	.62
Smirnoff—				
Bore	665	10	2.05	—
A deeper bore is now in progress.				
Amerikansky—				
Bore 11	741	10.5	4.21	.11
,, 12	735	19.2	4.51	.15
Tissoff—				
Bore 18	916	8.3	3.32	.02

At the middle of April 1915 the "assured" ore proved by development and boreholes was 2,031,000 tons, and a further 636,000 tons is reckoned for extensions beyond the limits of present exploration, making a grand total of 2,667,000 tons.

	"Assured" Long Tons	"Extensions" Long Tons	Total Long Tons
Koniukhoff Mine	505,000	163,000	668,000
Smirnoff Mine	497,000	212,000	709,000
Amerikansky Mine	576,000	104,000	680,000
Tissoff Mine	453,000	157,000	610,000
Totals...	2,031,000	636,000	2,667,000

The ore mined in the year to middle of April 1915 is returned as 352,000 tons, consequently on the rate of output of 1914 the "assured" ore has a life of about six years, and the extension is estimated to give a further life of nearly two years. Against 352,000 tons used in the year the fresh ore brought into sight was estimated at some 558,000 tons. The fact has to be grasped that from its incorporation in 1908 to the end of 1913 the Company in 1913 had attained an output of copper metal of 7,971 tons.

The authorised share capital of the Kyshtim Corporation was fixed at £1,260,000. For a period it had a round million of £1 shares issued, and then the Company was financed for a period by £650,000 of 6% Debentures, convertible into shares. All the Debentures—an insignificant amount excepted—have since been converted, so that at the present time the issued capital is £1,254,240, and the balance of 5,760 shares is reserved against the conversion of the remaining £14,400 of Debentures; so to all intents and purposes the capital may be taken as £1,260,000.

As a consequence of the War there has been a serious effect upon the exchange rate, which for the time mars the dividend outlook. Altogether four dividends have heretofore been paid—1s. in December 1912, 3s. 6d. July 1913, 2s. January 1914, 1s. 6d. October 1914. It is proposed to declare a dividend in respect of 1914 of 1s. per share, and to carry forward £145,786. This carry-forward compares with only £6,002 a year ago, and the large amount at end of 1914 after providing for dividend is not free for disposal, being mainly represented by silver and gold residues in Russia, the export of which has been prohibited by the Russian Government. We should say that in all our calculations above as to results secured the sterling amounts have been taken at the uniform rate of exchange that has all along been adopted of 9.5 roubles to the £. The shilling dividend recommended will be paid November 1 next, free of income tax, and will absorb £62,712.

The price of the £1 shares at the present time is about 1⅛. Were there to be an early termination of the War and ability to again expand output the prospects of the shareholders would vastly improve.

The results of operations of the Russian Company for each of the past four years are set out below:—

	1914 Tons	1913 Tons	1912 Tons	1911 Tons
Ore treated	340,087	349,916	338,379	233,052
Yield, refined copper	7,588	7,971	7,547	5,020*

* Of this production only 3,804 tons of refined copper were delivered during the year.

Russian Company's Trading Profits and Appropriations.

	1914 £	1913 £	1912 £	1911 £

,, Payment of dividend	210,526	311,579	296,421
	367,443	476,877	468,401

The position as to the Corporation's finances is disclosed in the particulars that appear in our advertisement pages.

Globe and Phœnix.—Those of our readers who studied the analysis of this Company's position which we gave in THE STATIST of May 1, will not be surprised at the official announcement that the directors have deposited £84,000 with the Company's bankers to await the result of the John Bull Litigation, and therefore do not propose to make a dividend for the quarter. In the course of our remarks on May 1 we pointed out that "the total distribution of 120% for 1914, calling for £240,000, exceeded the profit of the year, after providing for capital expenditure, by more than £40,000." The balance sheet showed, after allowing for the payment of these dividends, an excess of current liabilities over liquid assets of

no less than £70,000. We concluded by saying: "It is better that dividends should be temporarily reduced than that the Company should stand on the brink of financial trouble, which some serious unexpected incident or accident might precipitate." We are glad, therefore, to note the setting aside of £84,000, as this must be considered a necessary safeguard.

BROKEN HILL SOUTH.

DURING the half-year ended June 30 this Company's mine and mill only worked half-time, owing to lack of smelter capacity. Nevertheless, the 130,320 tons of ore treated was nearly 18,000 tons greater than in the previous six months, and only 42,000 tons less than the quantity for the half-year to June 30, 1914—a normal period, immediately prior to the outbreak of the War. It should be noted that by the treatment of the crude ore from its mine the Company does not itself produce pure metal, but only lead concentrates, containing mostly lead and silver, and tailings (residues), containing zinc. Both the lead concentrates and the zinc tailings are sold to other concerns for further treatment and smelting, and the Company receives payment on the basis of the price eventually realised for the metals produced. Prior to the War the lead concentrates and the zinc concentrates obtained from the tailings by the purchasing companies were sold to German smelters. Consequently, when the War broke out the outlet for the concentrates was almost entirely cut off. Luckily there existed local smelteries, but their capacity was entirely inadequate. Their extension, however, was immediately taken in hand, and it is expected that by the end of this year there will be ability to cope with the full normal lead concentrate output of the four Broken Hill companies—of which the South is one—who are associated with the extension of smelting scheme.

The uncomfortable position in regard to zinc has not been so easily overcome. The Company's tailings were sold to two local treatment companies—the Amalgamated Zinc and the Zinc Corporation—which in turn used to sell the zinc concentrates they produced to Germany. At the present time the Amalgamated Zinc is continuing to treat the tailings material, but the production of concentrates, apparently, is for the most part being stacked, awaiting a market. Recently it has been advised that some thousands of tons of these concentrates have been sold to America and France, but the quantity so disposed of does not bear a large proportion to the stock on hand and current production. The Zinc Corporation's tailings plant is not working at all.

This brief explanation is necessary for a proper understanding of the Broken Hill South Company's accounts for the half-year to June 30, 1915, inasmuch as the course adopted has been to take credit in the profit and loss statement for the value of the production, and, as a large proportion of this has not been paid for, the profit shown, though earned, had not been realised. During the half-year, 24,961 tons of lead concentrates were produced and 80,880 tons of zinc tailings. The profit and loss account gives the value of the lead concentrate production as £218,525, while the revenue from zinc tailings is placed at £68,221. After adding small sundry receipts to these two items, the total revenue of the half-year comes out at £287,231. Total working expenses absorbed £133,400, so that the working profit shown by the accounts is £153,831. After providing office charges, taxes, plant depreciation, and expenses of the interest on the £200,000 of Debentures issued for the purpose of financing the Company's share in the local smelting works, a net profit of £123,772 for the six months is shown by the accounts, which compares with £90,000 for the previous half-year. A dividend of 15% for the past half-year, against nil for the previous similar period, absorbed £30,000, leaving £93,772 to be added to the carry-forward, which now stands at £326,419, against £143,682 immediately prior to the outbreak of the War. The necessity to finance a large proportion of the output pending its disposal is responsible for the smallness of the dividend and the great increase in the carry-forward. During the year ended June 30, 1914—that is before the War—the dividends paid aggregated 140% on the issued capital. A comparison of the operating results and earnings of the past four half-years, showing the effect that the War has had on the Company's prosperity, is given in the following table, which also shows the increase in the Company's surplus assets and the fall in the price of the £1 shares, of which there are 200,000 in issue in addition to the £200,000 of recently subscribed Debentures.

* [illegible] in the balance sheet.

As will be seen above, in eighteen months there has been an increase of as much as £300,000 in the Company's surplus assets. The figures include, as is the official custom, the value of stores and products on hand unrealised, and, strictly speaking, neither of these items can be termed liquid, though the products on hand are realisable in due course. In taking note of the huge increase in the surplus assets at the end of June compared with the figure six months previously the fact that the Company has made a Debenture issue of £200,000, on account of which it had at date of the accounts received £174,528, must not be overlooked. On this account the cash, debtors, and investments of the Company show a substantial increase, while the whole of the large undistributed profits of the past half-year will be found reflected in the much higher value attaching to products on hand unrealised. A detailed comparison of the surplus assets at the end of the past four half-years is important as showing the Company's financial position before and since the outbreak of the War.

Surplus Assets.

	June 30, 1915*	Dec. 31, 1914	June 30, 1914	Dec. 31 1913

Liabilities				
Creditors, &c.	[illegible]	31,506	35,209	26,814
Surplus Assets	512,381	249,916	202,459	212,501

* Assets include £174,528 on account of £200,000 of Debentures issued.

It will be observed that in the year of War the output unrealised has had to be financed to the extent of no less than £200,000, and, as payment will in due course be received, the Company's cash position will eventually become exceedingly strong, and a very large sum of money—equal to 100% on the Company's capital—will be set free for divi-

dends in addition to the profits earned by current production. Furthermore, the scale of operations has recently been increased, and when the smelter capacity is able fully to cope with the supply—which it should be able to do in a few months' time—the profits, and especially the dividends, of the Company should show very considerable expansion. The mining position is very strong, there being in sight about 3,350,000 tons of ore, representing about 10 years' supply for the normal plant capacity.

The net profit shown by the accounts of the past six months to June 30, 1915, was equal to 60% on the Company's share capital, and the necessity for temporarily financing the output alone prevented the payment of more than 15% dividend.

The price of the £1 shares is £7¼, and, if continuance of a high quotation for lead can be relied upon, they do not appear to be over-valued. As to the Debenture issue of £200,000, this will be represented by what should be a very profitable investment in the shares of the local works for smelting the Company's lead concentrates.

Burma Corporation.—The indication of sharp falling off in the metal contents of the ore body at the 540-foot level, first noticed in the internal shaft crosscut driven in July, is much more conspicuous in the two crosscuts in course of being driven further to the south. This will be seen from the following contrast:—

540-foot Level Crosscuts.

	Distance Driven Feet	Assay Values—Silver Oz.	Lead %	Zinc %
Crosscut 1,500-foot S. (Internal Shaft) ...	25	12·0	15.0	14.0
	15	30.0	30.0	30.0
	20	5.0	9.0	5.0
	10	2.0	3.0	3.0
Total...	70	—	—	—
Crosscut E. 1,564-foot S.... ...	15	4½	6.0	11.0
	5	3	4.5	4.0
	5	21	2.5	21.0
Crosscut W. 1,564-foot S. ...	10	11	16	10.0
	10	7	10½	4.5
Crosscut E. 1,600-foot S. ...	10	6.0	7.5	10.0
	5	2	2.5	7.0
Crosscut W. 1,600-foot S. ...	10	4	10.0	2·0
	5	12.5	23.0	4.0
	5	4.0	4.0	1.5

Driving both north and south in the level from the internal crosscut, however, indicated high-grade ore for the width of the drives. The showings are set out below:—

540-Foot Level.

South Drive. Distance Feet	Assay Values—Silver Oz.	Lead %	Zinc %	*North Drive.* Distance Feet	Assay Values—Silver Oz.	Lead %	Zinc %
15	34	43	25	15	41	44	36
20	25	28	33	5	41	45	25
10	20	16	37				
5	22	24	24				
30	26	32	21				

Too much importance should not be attached to the crosscut showings. The width of the lode is still great, and the extraordinarily high values met with nearer to surface could not reasonably be expected to continue without fluctuation. The high values have continued deep enough to bring a large tonnage of very rich ore into sight.

KNIGHT CENTRAL.

To December 31, 1914, south of the dyke developments at the 13th to 16th levels were in unpayable zone, a total of 5,280 feet sampled, principally driving work, having shown an average assay value of only 2.7 dwt. over 56 inches.

In the March quarter this year 430 feet sampled on *South Reef* was reported to have averaged 1.9 dwt. over 70 inches.

Early in June, at the 16th level the east drive from the west shaft (on *South Reef*) for 90 feet sampled had given an average of 31*s.* 5*d.* over 54 inches.

A mid-September cabled advice was that the *Main Reef* had been intersected at the 17th level, west shaft. Four samples taken were reported to show an average of 95*s.* 1*d.* over a width of 40 inches.

About October 4 advice was received that at same level (No. 17) cross-cut from west shaft *South Reef* was intersected: "Four samples average 8.3 dwt. (35*s.* 3*d.*) over 12 inches." Such value over stoping width would not pay.

Brakpan.—Capital issued, 750,000 £1 shares; 160 stamps. Nine tube mills now working. Present rate of output about 760,000 tons a year.

The Statist.

LONDON, SATURDAY, OCTOBER 9, 1915.

OUR GREAT IMPORTS.

THE success of the Franco-British loan of £100,000,000 from America, and the remarkable demonstration of friendship for the Allied nations by American business men at a banquet given by the Pilgrims to Lord Reading and his colleagues, have almost entirely destroyed any doubt hitherto held as to the ability of France and of Great Britain to continue to import goods from the rest of the world on the great scale of the current year. By these demonstrations the American people have shown their sympathy with the Allies, and, as everyone knows, sympathy between nations means credit. Moreover, it will be realised that this action of the United States carries with it much greater consequences than the granting of American credit. The American public recognise the goodness of the security which Great Britain and France are able to give for any loans granted to them, and in so doing they set an example to other nations from which the Allies may need to purchase goods to accept payment in securities also if no other method of payment is possible. Having regard to the necessity of the Allies to concentrate their energies on war production, it is obvious that they will not be able to export goods in sufficient volume to pay for all the goods they wish to import, and that unless the countries with goods to sell are willing to accept payment partly in securities, purchases from those nations must be restricted to the amount of the goods which the Allied nations can pay for by other means. Hitherto the Allied nations have paid for goods imported in excess of the amounts paid for by exports, interest, and services by means of considerable sums of floating capital which they possessed in all parts of the world. These supplies of floating capital have now been appreciably reduced, and the question which the American people had to decide was whether or not the Allied Powers must restrict their purchases or be allowed to pay for goods in securities. The reply of the American people in granting the loan, and, moreover, in their reception of the Anglo-French Commission, is clear and definite. They are more than willing to supply the Allied nations with all the goods they need—food, raw material, and munitions, and to take payment in securities for any balance not paid for in goods and services. And what the American people are prepared to do other nations will doubtless be also willing to do, as they will recognise that it is far wiser to sell goods and to take payment in the obligations of wealthy nations enjoying an income large enough to permit them in ordinary times to invest abroad some £300,000,000 a year than not to produce the goods, or to store them with the possibility of having to keep them in store for an indefinite number of years. Practically, therefore, the loan operation in the States means that the Allied Powers will be able to purchase from any country in the world the goods which those countries can supply even should the normal system of exchange not permit them to be paid for until after the War is over.

In this respect we welcome the attitude which Japan is adopting towards the purchases of her goods by Russia, which at the moment has some difficulty in exporting goods in payment for her imports. It is true that Japan has no great amount of surplus wealth available for investment in other countries, but it is evident that if the Japanese people are disposed (and they are so disposed) to work still harder than they normally do, that they will be able to produce a great quantity of goods for export, and by this means may during the War succeed in paying off a large part of their debt to other nations. Furthermore, the reader has doubtless noted that Australia has recently raised a substantial loan for war purposes, and has thus relieved Great Britain of a part of the burden of financing the War, and that now preparations are being made in Canada for the issue of an internal loan, by means of which the Canadian people will also meet their war expenses.

Indeed, the great purchases of goods now being made by Great Britain, France, Italy, and Russia are likely to so greatly increase the demand for the goods of all countries that nearly every nation which has hitherto been a debtor country will be able to lend. Normally, of course, the young countries devote their growing capital to their own development, and beyond this import large amounts of capital from France and England. The War, however, has stopped immigration into these countries, and the capital they would otherwise use in providing for the usual influx of immigrants will become available either for investment in the securities of the Allied nations, or for the re-purchase of their own securities of which Great Britain and France hold so many.

As our readers are aware, the foreign and Colonial securities possessed by Great Britain are not far short of £4,000,000,000, and now that Great Britain and France are buying goods so freely not only from the United States, but from Canada, Australia, Argentina, and other countries, it may be possible either to sell back securities to these countries in payment for goods, or to sell securities similar to the Allied loan about to be placed in the United States. But, whatever may be the method adopted, it is obvious that no difficulty is likely to arise in obtaining the credits needed to buy the goods required.

Of course, the British people will recognise that in proportion as they pay for imports with securities and not with goods their wealth is being reduced, and that in proportion as they are economical in their expenditure the loss of wealth through the War will be curtailed. Moreover, it is necessary to recollect that if the British people create debt in Colonial and foreign nations which they will wish to redeem after the War is over, their power to supply new capital in the ordinary manner will then be restricted. These considerations should, however, have no weight whatever if the goods are really needed, as everything must if necessary be sacrificed to secure victory to the Allied forces. But they should have weight when unnecessary expenditures are being incurred, and when the country is under the necessity of borrowing from other nations to meet expenditures that are not essential, and which, by a little self-denial, could be avoided. We know how difficult it is for a large number of persons not to spend money when they have it to spend, and that the practice of economy is not in harmony with British character; nevertheless it is of the greatest importance that everyone should understand that if unnecessary expenditures can be kept down at the present time, the amount of debt which the nation will incur to foreign and colonial countries will be diminished, and that the task which the nation will

have to perform after the War of redeeming its foreign debt will be lightened. Apart from these considerations the willingness of the American people to provide the Allied nations with the credits they need in order to pay for the vast quantities of goods they are now buying in the United States is a most satisfactory and encouraging event, as it means that the Allied nations will be able to purchase all they require from the world, and that trade in the countries which supply the Allies with goods will be both active and profitable.

Prior to the current year the value of the net imports—imports less re-exports—into Great Britain has only once reached £659,000,000, but in the current year the value will probably reach £900,000,000, including, of course, Government purchases, and in the twelve months to June next it is probable that the total will reach upwards of £1,000,000,000. This would be from £350,000,000 to £400,000,000 more than usual. In September our net imports were of the value of rather less than £63,000,000, or at the rate of over £750,000,000 a year, and if to this amount be added Government imports and foreign payment of £20,000,000 per month, we arrive at an aggregate figure of about £1,000,000,000 per annum. On the other hand, the value of British exports, although substantially higher than in September of last year, was only £32,300,000, or at the rate of somewhat under £400,000,000 a year, against about £530,000,000, the highest hitherto reached. Thus our imports now exceed our exports at the rate of about £600,000,000 a year. In considering this position we have, of course, to take into account the income we are deriving from interest, shipping, &c., which probably amounts to some £350,000,000, or even £400,000,000, a year; and, on the other hand, we have to note the large credits that the British people are giving to the Allied countries. The Chancellor of the Exchequer placed the amount of these in the current fiscal year at £423,000,000. Apparently this amount included some of the loans made in the last fiscal year, but when we take into account the additional loans that may still have to be made in the current year to our Allies and the capital subscribed in the London market for colonial and foreign countries, the amount in the current year will probably reach £400,000,000. We are glad to learn that additional credits have now been arranged for in the London market by the Russian Government. Whatever economy we make in our expenditure, we trust that no restriction will be placed upon the amount of money that will be lent to Russia. Indeed we ourselves had expected that the main part of our assistance to the Allies would have consisted in the loan of great sums of money to the Russian people, to enable them to obtain all the war material they needed and to meet their expenditures, and it is obvious that we must allow nothing to interfere with this essential work. When the British people are considering the question of what expenditure they can curtail they should provide for greatly increased and not reduced credits for Russia. Thus, having regard to the public issues of capital for colonial and foreign nations in the London market and the granting of credits to our colonies and Allies, it is obvious that the amount of capital we shall need to provide for colonial and foreign nations in the coming year will be at least £400,000,000, and it may indeed reach the £423,000,000 estimated by the Chancellor of the Exchequer. Thus the income we are drawing from interest, shipping, &c., is no more than sufficient to provide the capital sums we are lending to our Allies, to our colonies, and to other nations.

Hence Great Britain is now importing and proposes to import goods for about £200,000,000 a year in excess of the goods it can export and the income it derives from interest and services, and proposes to lend its credit to its Allies and colonies for another £400,000,000, and the excellent example set by the United States encourages us to hope and to expect that no real difficulty will arise in paying for this excess of imports by sales of British securities or of our investments in the securities of the countries from which the goods are bought.

In the course of an interview in New York, Sir Edward Holden referred to the possibility of another loan in America early next year. The success of the present loan and the growing recognition by American business men and by the American people that there is no practical method of paying for all the goods we are buying except in securities, makes it evident that a second loan may be even more successful than the first. It is, of course, always difficult for a nation to alter its habits, and as hitherto the American people have invested practically the whole of their savings in their own country, the task of inducing them to invest a large sum abroad was particularly difficult. But now that American investors and bankers realise that behind the bonds they are taking at such an attractive rate of interest there is almost unlimited wealth, and, therefore, unlimited security, we have no doubt they will be ready to subscribe whatever sums are needed to permit the Allied Powers in general, and Great Britain in particular, to purchase all the American goods they need. It is scarcely necessary to state that so far Great Britain has paid for the goods she has purchased either by exports or by calling in floating capital or by sales of securities, and that against the capital called in in this manner she has received a nearly corresponding amount of securities from her Allies. In the five months to the end of December the excess of imports over exports was nearly £103,000,000, and after taking into account the imports of Government stores on the one hand and the income from interest and services on the other, it is obvious that Great Britain did not need to call in any capital from abroad to cover its trade indebtedness. In the first nine months of the current year, however, the situation was not quite so favourable. Net imports of £568,000,000 have been attended by exports of £283,000,000, and the excess of imports over exports reached £285,000,000. Were it not for the purchase of Government stores the whole of this sum would have been provided for by the income derived from interest, freights, &c., but including Government stores there has probably been a deficiency of somewhat over £100,000,000, and to this must be added the loans we have made to Allied nations. Altogether it is evident that in the nine months we have called in floating capital from abroad or sold American securities amounting to about £400,000,000. It should be understood, however, that we have already supplied the money lent to our Allies, and made payment for our imports for the nine months, and that all the nation has now to do is to provide for an adverse balance of about £600,000,000 in the next twelve months, mainly arising from loans of some £400,000,000 to Allied nations.

If it were possible for the British people to make economies of £200,000,000, they would entirely cover their own adverse balance of imports over exports, and would merely lend their credit for the purpose of borrowing from the world the sums they are lending to the nations with which they are co-operating for so mighty and so far-reaching a purpose. This would indeed be a wonderful thing to accomplish. But whether or not the nation meets its current expenditures in part by economy or decides to borrow abroad all the money needed to cover the trade balance, we have no doubt whatever that it will be able to buy all the goods it needs, and that within a very short time after the War is over it will redeem whatever debt it incurs to other nations. We set out below a statement of our trade in the first five months of war to December 1914, in the nine months to September 1915, and for the month of September 1915, for the purpose of showing the extent of our imports, the extent of our exports, and the amount of the excess of imports over exports, apart from the Government purchases. In the past the latter may be reckoned

at about £12,000,000 a month; but in future they will probably be in the neighbourhood of £20,000,000 per month. Our income from interest, freights, &c., may be calculated to be £30,000,000 to £35,000,000 a month, and our loans for foreign and colonial countries also at about £30,000,000 to £35,000,000 a month.

ISSUES OF NEW CAPITAL.

In recent months everyone has been busy in paying up for the last Government loan of nearly £600,000,000; and there have been practically no other public issues of capital. In the first part of the year, however, a considerable sum of money was lent for other than Government purposes, and about £60,000,000 of money has been subscribed for various purposes other than loans for the British Government. Of this amount about £27,500,000 has been for the British Colonies, £19,000,000 for foreign countries, about £9,000,000 for the United Kingdom, and rather less than £4,000,000 for India and the Colonies. Altogether in the current year the amount of capital subscribed has reached the enormous total of £687,689,000, a sum which compares with £537,000,000 in the whole of 1914 and £248,000,000 in 1913. How soon before the British Government will need to place another loan is unknown. It is known, however, that the Government's resources for meeting its expenditure will be exhausted in another month, and consequently it is expected that another loan will be issued some time in November. The very large amount of capital subscribed this year will be evident from the following statement of the quarterly sums, and also by the additional statement of the amounts subscribed monthly since the beginning of 1915.

THE BALKAN IMBROGLIO.

Events have moved very rapidly during the week in the Balkans, and yet have not cleared up a single doubt that existed. All that can be said with certainty is that a grave crisis has arisen, and that it must resolve itself quickly into decisive action. The mobilisation of the Bulgarian army was immediately followed by a counter-mobilisation of the Greek army, and an intimation from M. Venezelos that Greece is bound by treaty to support Serbia against attack, to which the Bulgarian Government replied that there is no intention on its part to change its policy of perfect neutrality. The Russian Government also sent an ultimatum to Bulgaria, which was endorsed by our own Government and the Governments of France and Italy. But Bulgaria has not budged an inch. The Entente Allies are withdrawing their representatives from Bulgaria. Practically, that is to say, they are at war with the little Kingdom. M. Venezelos, who, having returned to power, obtained a large majority for his policy in the *Boule*, and having taken up so decisive a course, seemed to be safely in the saddle, has learnt from the King that the latter disapproves of his policy; has accordingly resigned; and a Coalition Government has been formed. The apparent cause of King Constantine's wavering policy is that M. Venezelos had given his consent to the landing of British and French armies at Salonika. The landing of those armies has begun. Consequently, the policy of M. Venezelos is, to that extent, being carried out. But M. Venezelos himself has been driven from power, and apparently, therefore, Greece is resolved either to join the Central European Powers or to remain neutral. It is extremely difficult to believe that she can either remain neutral or join the Central European Powers, for, with the consent of a Greek Government, British and French armies are landing in Greece. To attempt to turn them back would be an act of hostility against the Entente Allies. To allow them to use Greece as a base for the protection of Serbia would presumably be regarded by the two Central European Powers as an act of hostility towards them. Greece, at all events, is thus placed in the frying pan, and she must quickly jump from it to one side or the other. Lastly, the attitude of Roumania remains as doubtful as it has been for a long time past. It was almost universally believed that Roumania, as well as Greece, had promised assistance to Serbia should she be invaded. Roumania certainly has refused to allow German and Austrian munitions to be sent through Roumania to the assistance of Turkey. And it has all along been understood that opinion in Roumania was on the side of the Entente Allies. Yet there is as much uncertainty as ever there has been of the real intentions of that Kingdom. Meanwhile, the Germans claim to have invaded Serbia and crossed the Danube, the Save, and the Drina. German newspapers, furthermore, allege that there is an agreement with Bulgaria that she shall invade Serbia with 300,000 men, and that the Austro-Hungarian Army will be not less than 100,000. If we can trust German accounts, and they are very untrustworthy, not only has the invasion of Serbia at last begun, but the Bulgarians have bound themselves to join in the attack. That being so, the British and the French forces must advance from Salonika, and all the Balkan States must without delay make up their minds.

The experience of the past fourteen months in regard to the Balkans brings out very clearly once more how carefully Germany has, during the past half-century, been preparing for the great struggle upon which she so rashly entered at the end of July of last year. Her arrogance and the unwillingness of the British Government to mix up this country with Continental affairs enabled Germany to place upon the thrones of Roumania, Bulgaria, and Greece three German princelets. At the time any suspicion of an

ambition to rule all Europe on the part of Germany was pooh-poohed as utter nonsense, while our own Government, blandly declaring that it was pursuing a policy of splendid isolation, refused to take a single step to counteract the plots that were being woven. The death of Queen Victoria placed upon the British throne a Sovereign who had a very keen interest in, as well as a very deep insight into, Continental politics; and under his influence the policy of this country has been greatly changed. But the Balkans practically had been garrisoned by German nominees.

Russia, which, at the cost of much blood and much treasure, freed Bulgaria in 1877, finds herself in effect defied by that State, and apparently will have to use force to prevent her from doing mischief. We ourselves allowed another German prince to be placed on the throne of Roumania, and a third upon the throne of Greece. We are now reaping what we sowed. And we are discovering that the much-vaunted watchfulness and foresight of the British Foreign Office are things that never really existed. We have been fooled to the top of our bent, and now we find ourselves with our French Allies not merely attempting to open the Dardanelles, but actually bound to send a military expedition to defend Serbia. Any more deplorable fiasco it would be difficult to discover. However, let the past bury the past. Our business now is to get out of the entanglement the best way we can. Fortunately, for one thing, we have a Navy that enables us not only to reinforce as may be required the troops landed at Salonika, but owing to the immense superiority of that Navy we are in a position to strike at any point that seems desirable to us. Furthermore, it is hardly credible that the Greek people can, with their eyes open, deliberately throw away the greatest opportunity ever likely to be offered to them. If they overrule their King, recall M. Venezelos to power, and heartily join the Entente Powers, they are assured not only of an extension of Greece Proper, but of large accessions of territory in Asia Minor as well. The late elections took place under the influence of a Premier who was chosen specially to carry out the King's policy in opposition to that of M. Venezelos. Yet on the test vote the other day M. Venezelos obtained a majority of 42 in a House which was elected purposely to support the King and defeat the Greek statesman. Therefore, we have the clearest proof that the Venezelos policy is the popular policy and that its majority would be much larger were it not that a certain number of King's men were elected from the new territory obtained by Greece in Macedonia. The real feeling of Greece, then, is manifestly on the side of the Entente Powers. In the same way, it is impossible to doubt that the real feeling of Roumania is in favour of the Entente Powers, or, it would be more correct to say, is in favour of joining the Entente Powers with the object of overrunning Transylvania without delay and winning for the kingdom the Roumanians who have been so trampled upon by the Magyars. Lastly, it is difficult to believe that the Bulgarian people have forgotten their pitiful state under Turkish tyranny, the money and the lives that Russia sacrificed to set them free, and to please an intriguing Sovereign are ready to turn their armies against their best benefactor. While, therefore, the probability is that the crisis will end more favourably than overt acts augur at present, it would be rash to place too much reliance upon that. Governments actually in power have innumerable ways of influencing the public. And when a well-drilled army is called to the Colours it is a very serious thing indeed for either officers or men to refuse to obey orders. We must not, then, expect too much from popular feeling. That the Bulgarian and the Greek Governments are at present running counter to the real popular feeling of their countries we do not for a moment doubt. And yet we shall not be surprised if military discipline enables the two Governments to do a great deal of mischief.

A very few days must make things clear. Therefore, it is useless to indulge further in conjectures. Yet we cannot close without urging our own Government and the Allies generally to act promptly and to act vigorously. We have no wish to say anything that even by accident might assist the enemy. We refrain, therefore, from suggestions of every kind. But the present is an emergency which demands strong and decisive action, and not a moment, therefore, ought to be lost. We have been assured time out of mind during the last fourteen months that we were engaged in a task of the gravest difficulty, and that we should require all the men and all the munitions that can be provided. The answer to all these assurances has been splendid. Is the Government prepared to show that it deserves the confidence that has been reposed in it? Respecting the feeling of Russia, there can be no doubt she has been wounded in her tenderest part, and it is incredible that she will spare any possible action to set things right. Happily, our French Allies and our own gallant troops have resumed the offensive once more with brilliant success. The Germans, therefore, appeared to be thinned both in France and in the Eastern Field of operations. Therefore, there ought to be not a moment's delay in striking hard and striking quickly.

THE WAR AND THE EMPIRE.

This is not a time, we very freely admit, for advocating extensive projects of reform. Yet the very fact that we are engaged in so terrible a war enjoins upon us to make, or at all events to prepare for, certain extremely urgent reforms. We shall to-day advert only to one, for it will have to come, and the sooner we all recognise the fact the better it will be for us. Last week we welcomed the announcement made by the Viceroy of India in the Council at Simla that the British Government admitted the full justice of India's claim to be represented in future Imperial Conferences, but reminded him that the self-governing Dominions and Commonwealths have a voice in the matter, and that, consequently, the United Kingdom could not go farther than has just been stated. It is with the very greatest gratification that we notice that the Press of the self-governing Dominions is, so far as we have been able to see, unanimously of opinion that India henceforward must be represented in future Conferences. The reader will bear in mind that this question is not one of mere prestige, but that it is a practical question of the very gravest importance for India as well as for the other communities which hitherto have been represented in the Conferences. For example, the fourteen months of war have impressed upon the whole world the amazing influence which sea power confers upon the State that possesses it in the fullest measure. The two Central European Empires are dependent entirely for communication with the outside world upon their neutral neighbours. They dare not send a vessel of any kind across the seas. They cannot buy the things they need most direly. And they cannot sell what would help them to bear the cost of the War unless neutrals do the work for them. We, on the other hand, are in constant unbroken communication with every part of the world because our Fleet is able to sweep the seas. Now, this demonstration has two great lessons for all observers. The first is that it is of the utmost value to the self-governing Dominions, Commonwealths, and Unions that they are not thrown upon their own resources to keep open their communications with the rest of the world, but that they belong to an Empire which is absolute mistress of the seas. Therefore, they can laugh at the threats of invasion, and they can rest secure that they can buy and sell freely in all the great markets of the world. All these statements are as true of India as of the self governing Dominions; and, therefore, it brings home to all

thinking Indians that whatever drawbacks there may be in their present relations with the British Empire, they have at least this one great overmastering advantage, that the markets of the whole world are open to them, and that though for a while they were alarmed by the antics of the *Emden*, for a whole twelve months now they have seen that the danger of invasion is absolutely gone. After such unquestioned demonstration it will be of the most urgent importance that all parts of the British Empire retain the fact fully in mind and make sure that never in the future shall they be exposed to dangers which would be certain if they lost the supremacy of the seas. The question is as urgent for India as it is for the rest of the Empire. Therefore the maritime policy of the Empire must engage the best attention of every member of the Empire, and it is reasonable and proper for India to assure herself that she shall have a potent voice in settling all such questions.

That, however, is only one of the reasons why we shall have to reorganise the whole Empire. If sea power alone had to be considered many persons, probably alarmed at additional expenditure, would shrug their shoulders and say, We are already able to sweep the seas. But important as it is to maintain sea supremacy, it is still more important, if we can, to ensure peace for as long a time as is practicable. Little more than fourteen months ago the world was flattering itself with the belief that the relations between England and Germany had improved, and that the danger of war, which for some years previously had seemed so imminent, was gradually decreasing. In a single week the whole face of the world was changed and we found ourselves involved in one of the most perilous wars in which we have ever been engaged. At that particular moment there was no time to consult with the self-governing Dominions, or, indeed, with anybody else. Germany took very good care that no such time should be given. When Austria-Hungary seemed to be alarmed by its own rashness in sending an insulting ultimatum to Serbia and was in a mood to draw back, Germany suddenly sent an ultimatum to Russia, giving the latter Power only twelve hours in which to answer. Germany thus chose the moment, and determined that there must be no delay. As things turned out, then, it was impossible to call together an Imperial Conference, or, indeed, adequately to consult any portion of the British Empire beyond sea. Germany took care that while she would pledge herself to respect the integrity of France proper, she must retain full freedom of action regarding France's colonies; and she, likewise, declared that her signature to the Treaty guaranteeing the independence and neutrality of Belgium was only "a scrap of paper." Therefore, we have clear proof that there is at present in the world a Power which laughs at the most solemn Treaties and the most solemn pledges of any kind that it gives, and as even at this day there is such a Power, there may be others in the future equally ready to throw over all their obligations. It will, then, be the duty of the Imperial Conference, as well as its right, to seriously consider how even the most immoral of Governments can be bound. We cannot, then, wait till the War is over to reorganise the Empire; for the self-Governing Dominions and India have an unquestionable right to a voice in the settlement of peace, and that they may exercise that right efficiently the arrangements ought to be made without delay. We admit fully that the whole mind of the country and its Government is fully occupied by the War. But that will be no answer by and by if, when the time for negotiating peace comes, measures have to be taken which will give offence both to the self-governing Dominions and to India. We see clearly what is before us, and have learned to our cost what unpreparedness means. We ought to take measures to ensure that we shall be fully prepared when negotiations begin.

THE REICHSBANK.

The return of the Imperial Bank of Germany for the last day of September is always of exceeding interest, for the ending day of that month is one of the four quarterly terms on which occur remarkable changes in the condition of the Bank, and as it is just at the close of harvest time, it usually exhibits very remarkable alterations. The fact that War just now is adding its influences to so many others, makes the return all the more interesting. The total amount of gold held on the last day of September was £120,971,700, against £85,803,550 at the corresponding date last year, showing an increase of £35,168,150, or 41.0%. It will be recollected that at the end of September last year War had existed for two months. Belgium had been trampled underfoot. The great rush upon Paris had taken place. And the invader had been driven back from the Marne and the Aisne. It will be noticed that the increase in the gold-holdings even during the War has been remarkable. It shows firstly, beyond all question, that the German Government has succeeded to a remarkable extent in inducing its subjects to exchange their gold for its notes; and it suggests that possibly Germany may have obtained some gold from Austria-Hungary. The Treasury notes issued at the end of September amounted to £44,256,350, against £16,823,750 at the corresponding date of last year, an increase of £27,432,600, or 163.2%. It will be noticed how materially the Government has been adding to its Treasury notes as well as to all the other paper issues of the Empire. The notes of other Banks, however, amounted to no more than £596,700, against £367,350 at the corresponding date last year, showing an increase of £229,350, or 62.4%. Summing up the three items just referred to, and adding the silver, the total amounts to £176,697,000, being an increase compared with the corresponding date last year of £63,633,650, or 61.1%. Turning now to the circulation, which is limited by these four items, we find that on the last day of September it amounted to £307,881,500, against £224,544,650 at the corresponding date last year, showing an increase of £83,336,850, or 37.1%. The reader will not forget that while the gold and silver are set out as if they seriously and actually affected the solvency of Germany, no paper of any kind can be cashed. Germany is working on inconvertible paper alone, and that inconvertible paper is being issued by the Government itself, by the Reichsbank, and by other banks, several of them having been authorised to issue as a War measure. It would be extremely interesting if we had an accurate statement of the total note circulation of all kinds at the present time, for it would enable us to judge how purely fictitious is the gold holdings. Those gold holdings will be valuable to the victors when peace comes about. But so far as Germany is concerned at present, they are of little more use than to enable her, through neutral countries, to obtain some of the things she most urgently needs, and also to bribe. The bills discounted on the last day of September amounted to £373,528,800, against £237,788,500 on the corresponding date last year, an increase of £135,740,300, or 57.1%. Clearly the Reichsbank is financing both the Government and trade to a great extent. The deposits amounted to £220,812,750, against £117,535,900 on the corresponding date last year, an increase of £103,276,850, or 87.8%.

Review. This is the title of a new monthly magazine, which is intended to pave the way to a better understanding and knowledge of Russia and her peoples and to stimulate commercial and literary intercourse between this country and our great Ally. (J. Bale, Sons and Danielsson, Limited, Great Titchfield Street, W. 1s.)

THE COST OF LIVING.

OUR INDEX-NUMBER OF PRICES.

The world's great crops of foodstuffs have had a very marked effect upon the prices of vegetable foods in the past month, more especially of British wheat and of oats. In the Spring the *Gazette* average price of wheat rose to 62*s.*, and it has now fallen to 43*s.* 5*d.*, or very close to the quotation of a year ago, when it stood at 42*s.* 3½*d.* This lower price was, however, much above normal, as two years ago the price was 31*s.* 3*d.* The recent fall is a very acceptable one, and will materially assist to reduce the cost of living in a great many families. The price of animal food is also lower, owing to a sensible decline in the price of beef. Unfortunately, the cotton crop of the current year is very deficient in consequence of bad weather and the great reduction in the acreage planted. The higher price will, of course, rectify the latter situation next year, but in the meantime it is obvious that the short crops, even with the assistance of the additional stock brought forward from last year, will be barely sufficient to meet the world's needs. The price of American Middling has consequently risen to over 7.18*d.* a lb., whereas at this time last year it was in the neighbourhood of 5*d.*, and later on fell to nearly 4*d.* The full effect of this rise in the price of cotton was not felt in September, and next month's index number for textiles will probably show a further rise. Various sundry materials were also dearer in price, more especially wood and indigo, while various minerals were also dearer.

On balance the index number is higher than it was for August, and is, indeed, the highest reached since the War began, standing at 107.8 against 107 last month, and 82.4 before the outbreak of war. The advance since the War began is thus 25.4, or about 31%. As regards the cost of living of the great mass of the people, however, a fall in the prices of food is much more important than the advance in raw textiles and sundry materials, and it is evident that, in spite of the Dardanelles being closed and the absence of Russian supplies, the great crops of food of this year will make the cost of living sensibly cheaper in the current season than last year.

The following are THE STATIST'S index-numbers of the prices of 45 commodities, the average for the 11 years 1867-77 being 100:—

Annual Numbers.

Period	Average
1873	111
1878-87	79
1890-99	66
1905-14	79
1880	88
1896	61
1905	72
1906	77
1907	80
1908	73
1909	74
1910	78
1911	80
1912	85
1913	85
1914	86

Monthly Numbers.

Month	Index No.
July 1896	59.2
February 1909	71.9
June 1914	81.2
July 1914	82.4
August 1914	87.9
September 1914	89.3
October 1914	89.8
November 1914	88.8
December 1914	91.6
January 1915	96.4
February 1915	100.9
March 1915	103.7
April 1915	105.9
May 1915	107.2
June and July 1915	106.4
August 1915	107.0
September 1915	107.8

The index number of vegetable food is now 101.1, against 105.6 at the close of August, a decline of a little over 4%. Since the War began the advance is still nearly 52%. Notwithstanding a further rise in mutton and pork, the decline in the price of beef has brought down the index number for animal food from 131.8 to 129.3. This shows an advance of 32.6% since the War began. Sugar, coffee, tea, minerals, textiles, and sundries all show advance for the month.

Comparison of the prices of the various classes last month with previous periods is made below:—

	Veg. Food (Corn &c.)	Animal Food Meat & Butter)	Sugar, Coffee & Tea	Minerals	Textiles	Sundries
Year 1873	106	109	106	141	103	106
Aver. 1878–87	79	95	76	73	71	81
„ 1890–99	61	80	63	71	56	66
„ 1905–14	70	92	53	97	75	78
June 1914	66.5	97.5	51.8	93.7	80.6	82.5
May 1915	110.1	134.5	72.0	119.6	86.5	107.5
June „	103.0	127.5	73.4	126.6	91.6	106.2
July „	105.4	130.3	72.9	121.2	89.6	107.1
Aug. „	105.6	131.8	71.4	119.6	92.6	107.7

+ or - % Sept.'15	−4.2	− 1.9	+ 0.1	+1.7	+6.1	+ 2.3
Do. % since June'14	+51.9	+32.6	+38.0	+25.7	+21.9	+33.6

In the aggregate the index number of foodstuffs was reduced during last month from 108.1 to 105.2, or 2.7%. This leaves a net rise of 40.6% since the War began. On the other hand, the index number of materials rose last month from 106.3 to 109.6, or 3.1%, making a total advance of 27.9% since war began.

Taking articles of food and materials separately, the index-numbers for last month compare thus (1866-77 = 100 in both cases):—

	Food-stuffs	Materials		Food-stuffs	Materials
Year 1873	107	114	June „	105.8	106.9
Aver. 1878-87	84	76	July „	107.7	105.5

July 1896	60.0	58.6			
May 1907	73.5	88.9	+ or − % in Sept.	−2.7	+ 3.1
Feb. 1909	70.8	72.6			
June 1914	74.8	85.7	Rise % 15 mos.	+40.6	+ 27.9
May 1915	111.1	104.3			

The Silver market was firmer in September, and the price recovered from 23*d.* to 23¾*d.* This advance was due mainly to a short supply from America and to the increased demand for coinage purposes for Europe. The demand for the East has been very slack, although with trade improving there is a more hopeful feeling with regard to future purchases for India.

The price and index-number of silver for last month compare as follows (60.84*d.* per oz. being the parity of 1 gold to 15½ silver = 100):—

	Price *d.*	Index-No.		Price *d.*	Index-No.
Average 1890-99	34	= 55.8	Dec. 1906	$32\frac{5}{16}$	= 53.1
Average 1905-14	$26\frac{11}{16}$	= 43.9	June 1914	26	= 42.7
Average 1893	$35\frac{3}{8}$	= 58.6	Oct. 1914	$22\frac{3}{16}$	= 36.5
Average 1909	$23\frac{1}{16}$	= 38.9	Dec. 1914	$22\frac{11}{16}$	= 37.3
Average 1914	$25\frac{3}{16}$	= 41.6	Aug. 1915	23	= 37.8
Lowest, Nov. 1902	$21\frac{1}{16}$	= 35.6	Sept. 1915	$23\frac{3}{4}$	= 39.0

The great event of September was the visit of an Anglo-French mission to the United States for the purpose of arranging for a credit and its success in arranging for a loan of £100,000,000 bearing 5% interest and redeemable in five years, but with rights to holders to convert into 4½% bonds possessing a currency of not less than 15 or more than 25 years from the original date of issue. The issue price to the public is 98 and to underwriters 96. The arrangements for this loan brought about a marked recovery in the American Exchange, and at the close of the month the rate was 4.72, being equal to a discount of about 3%.

MURRAY, D. AND W.—Final dividend of 6% on Ordinary, making 10% for the year.

NEUCHATEL ASPHALTE CO.—No interim dividend will be paid on the Ordinary shares.

NOVELLO AND CO.—Dividend of 6% on Ordinary for the year.

OWEN, JOSEPH, AND SONS.—Dividend of 6¾% on Ordinary for the year.

PANAWATTE TEA AND RUBBER ESTATES.—Interim dividend of 6%, less tax.

"Silver Bullets" will win the War.

Financial Notes.

The publication by the Bureau of Foreign and Domestic Commerce, Department of Commerce of the United States, shows that for the first time in the history of the country the value of the exports from all American ports during the twelve months ended with August exceeded 600 millions sterling. The actual figures are £607,006,656, whereas for the corresponding period of the preceding year the figures were £456,037,158, showing an increase of £150,969,498, or 33.1%. Of the total exports during the twelve months under consideration merchandise accounted for £333,939,787. During the same twelve months the excess of exports over imports of merchandise amounted to £273,066,869. Finally, during the twelve months the net imports of gold amounted to £29,250,955, while the net exports of gold were £18,934,523.

The figures given above show beyond question that the War has exercised a very beneficial influence upon American trade, and especially upon the export trade. In fact, the needs of the belligerents have been supplied to a considerable extent by the United States, with great profit to the latter, as the figures just cited show. One speaker of high position, supporting elsewhere the proposed loan to England and France, stated frankly that just before the War circumstances had so combined that many careful American observers were apprehensive of panic. Circumstances have been so altered by the War, and by good crops, that America now is exceedingly prosperous, and he concluded that it is the interest of all American capitalists, whatever their feelings may be respecting the various belligerents, to support the proposed loan, inasmuch as it will regulate exchange and thereby enable the United States to export the produce of the country as well as the manufactures, which this year have all been most abundant.

It may be added that this year the crop prospects have not affected the Money market at all to the extent that might have been expected. The crops are all abundant and the country is looking forward with great hope to the future. But the recent change in the banking law, together with the check given to every kind of speculation, has made all the banks so well prepared for the demands upon them that they are not now compelled to draw upon their deposits in New York, as in previous years they always have had to do. There is thus an extraordinary abundance of money in the United States. Every exertion is being made to ensure a satisfactory export of cotton and [illegible]

It is to be recollected that the United States is capable of maintaining in a high degree of comfort probably five or six times its present population. When this dreadful War is over the whole of the belligerents will be more or less impoverished. Germany and Austria-Hungary, in particular, will be almost ruined. And there will be a strong desire everywhere to escape from countries reduced so seriously to countries which are highly prosperous. It is reasonable to expect, therefore, that just as large numbers of our present fighting men will betake themselves to the self-governing Dominions, so from the impoverished parts of the Continent there will be a large emigration to the United States. If there is, all the capital that America saves will be required to extend her railway system, to enlarge her towns, to found new towns, and to bring under cultivation the immense stretches of territory that are now more or less given over to grazing.

The Investment Bankers' Association at Denver during the week ended September 25 approved of the loan proposed to be made by the United States to the United Kingdom and France in the following terms: "The Investment Bankers of America, represented in this convention, approve the extension of foreign credits, not as indicating either partiality or prejudice, but solely as a matter of business and practically as a necessary outcome of existing conditions. We believe we should not lose the opportunity now afforded to become a creditor instead of a debtor nation, and broaden the scope of our financial usefulness and interests the world over. We indorse the attitude of neutrality which has been maintained by the national Administration, and urge the investment bankers to support and reflect that attitude in conducting international transactions."

DENVER AND RIO GRANDE RAILROAD.

NOTWITHSTANDING continued adverse conditions in the territory served, the Denver succeeded in getting through the past year with a fair degree of success from the point of view of net income, and again demonstrated its ability to earn sufficient profits to more than cover its own interest and other charges. This was due in the main to the increasing economy with which the traffic of the road was handled. The financial affairs of the undertaking were, however, much to the forefront by reason of the Company's relationship with the Western Pacific Railway. It will be remembered that a few years ago the Gould system of railways was extended to the Pacific Coast by the construction of the Western Pacific, which thus made the Denver the connecting-link between the Missouri Pacific and the new Pacific extension. The burden of financing the Western Pacific fell upon the shoulders of the Denver, and inasmuch as, in the first place, the cost of constructing the new line was far in excess of all anticipations, and, secondly, as a great stretch of line of more than 900 miles was built with only 10 or 20 miles of branch or feeder lines, the net income of the Pacific road was necessarily of small dimensions. To date the capital expenditures of the Pacific Extension amount to, roughly, $100,000,000, of which $50,000,000 was raised by the sale of First Mortgage bonds guaranteed as to interest by the Denver. The balance of the capital cost represents money provided by the Denver, in return for which the latter holds Second Mortgage bonds, and unpaid interest and other accounts represented in the Denver's treasury by unsecured notes of the Western Pacific. The results secured by the Western Pacific were, unfortunately, so unsatisfactory that each year the Denver was called upon to make good the deficiency in meeting the First Mortgage bond interest, besides having to pay interest on the sums it had borrowed with which to finance the Western Pacific. That the Denver was able to bear this dual burden speaks well for the strength of the undertaking. But twelve months ago the directors of the Denver decided that the Company would no longer make good any deficiency in earning the interest on Western Pacific First Mortgage bonds, and steps were taken to readjust the finances of the Pacific line with a view to making the undertaking solvent and of restoring the Denver to its former more prosperous condition. The tardiness of coming to any arrangement to this end resulted in the Western Pacific defaulting on the March coupon on its First Mortgage bonds, and therefore the line passed into the hands of receivers. For the past twelve months, therefore, the Denver has made no contribution towards meeting interest on Western Pacific bonds, but, of course, it has had to pay interest on the money it raised with which to finance that line.

What will be the nature of the readjustment of the Western Pacific's capital account we cannot venture to predict; but it is quite evident that the First Mortgage bondholders will have to modify their security, and it would seem that, in exchange for its large interests, the Denver will receive junior securities. An important matter to be settled is the provision of fresh capital for the construction of feeders and equipment. It is anticipated that eventually the Denver and the Western Pacific will be consolidated into one great system.

With regard to the Denver proper, many factors contributed to the decline in gross revenue in the past twelve months. In 1913-14, owing to a variety of causes, receipts fell off considerably, but in the past year new adverse conditions arose, and the decline in traffic and in revenue was even more marked than in the former period, the decline of $1,771,000, or 7½ %, in gross earnings last year having followed upon a shrinkage of $1,326,000, or 5¼% in 1913-14. Of the falling off of revenue last year freight was responsible for $1,147,000, of which 30% was due to smaller ore and bullion shipments arising from the quieter condition of the copper industry in the first nine months of the year, 40% to reduced tonnage of merchandise and manufactured articles because of general business depression and the diversion of transcontinental traffic to the Panama Canal, 15% to a smaller demand for coal and coke because of the relative inactivity in the copper industry and an unseasonable winter in the North-West, and approximately 15% to lower livestock, wool and lumber shipments. Operating expenses for last year were reduced $2,171,000, or 13.2%, so that there was a gain of $400,000 in net earnings. Taxes and miscellaneous income showed little change, and after meeting an additional $348,000 of prior charges the net profit was $9,000 higher at $1,146,000, a sum equal to 2.3% on the 5% Preferred stock. No dividends have been forthcoming on this stock since the December half of 1910 by reason of the heavy burden of interest charges due to financing the Western Pacific. The addition to the annual interest charges of the Denver on that account has been considerably over $2,000,000, so that, apart from the Pacific extension, the profits of the Denver proper in the past year were, roughly, $3,500,000, or about $1,000,000 in excess of the sum required to provide the full dividend on the Preferred. The course of earnings in recent years and the effect upon profits of the great increase in interest charges will be evident from the accompanying Income Statement, which, we add, does not include the sums which the

Denver provided to June 1914 to make good the deficiency in meeting the interest on Western Pacific First Mortgage bonds.

Probably the most satisfactory feature about the results for last year was the further distinct progress made in the economical handling of the traffic and the evident desire of the officers to do all that in them lies to make the Denver an efficient machine. Of the reduction of $2,171,000 in expenses last year, about 50% was attributable to reduced cost of conducting transportation. In some measure, of course, this was due to the smaller volume of the traffic conveyed, but in large part it arose from economies effected in operating the traffic, with the result that conducting transportation expenditures last year bore a proportion to gross receipts of less than 31%, which is the lowest ratio in the history of the undertaking. The remainder of the curtailment effected in expenses arose from less liberal outlays upon maintenance, more particularly upon maintenance of way; but while the expenditures upon maintenance are less than in the preceding three years, during which time the existing management has been spending abnormal amounts for such purposes, they compare very favourably on the average. Further, apart from the shrinkage in traffic having permitted of lighter maintenance outlays, it has to be borne in mind that in the territory served the weather last winter was not as severe as in the previous year, when unprecedented falls of snow were followed by unusual rainfalls. In all, maintenance expenditures last year represented 29.94% of the gross receipts, against an average of 30.97% for the previous five years. At the present time the condition of the roadway and equipment is stated to be better than ever before, and the truth of this is evident from the marked improvement in transportation efficiency. The reduction in the conducting transportation ratio is the more noteworthy in view of the decline in the average rate secured in recent years, owing to the growing preponderance of low-class freight traffic and an increase in the average length of haul.

The course of expenses in recent years, and the satisfactory downward tendency of conducting transportation costs, will be evident from the following statements:—

Operating Expenses of the Denver and Rio Grande Railroad.

Year to June 30	Gross Earnings.	Maint. of Way & Equip.	Maint. of Equip.	Cond. Trans.	Gen. & Misc. Exp.	Total

The benefit derived from the larger maintenance outlays of recent years, and the wise expenditure of new capital upon the Denver for reducing gradients by building détour lines, for replacing narrow-gauge track with track of standard gauge, introducing more powerful locomotives and higher-capacity equipment, and strengthening the roadbed, are apparent in the freight-train results now being secured. Until three years ago little progress had been made in loading the trains, and as traffic grew in volume the freight-train mileage was largely increased. But with the new method of working rendered possible by the improved physical conditions, great strides have been made in increasing operating efficiency, and, consequently, there has been a marked saving of train mileage, which, of course, has been the chief factor in bringing about the lower conducting transportation ratio. Whereas in the three years to 1912 an expansion of 24% in ton miles was accompanied by an addition of 13% to the freight-train mileage, with a consequent increase in the average train load of only 9%, in the last three years, although ton mileage has diminished 9%, a saving of as much as 36% has been effected in the train mileage, and the load per freight train has been raised no less than 45%, from 264.64 tons to 383.18 tons. Such an achievement is, indeed, noteworthy, especially bearing in mind that when traffic is declining, as in the past two years, the introduction of economies is much more difficult than when traffic is on the up grade. The improved freight-train results now being secured by the Denver will be apparent from the statement below:

Freight-Train Results of Denver and Rio Grande RR.

Year to June 30	Rev. Ton Mileage	Revenue Freight Mileage	Train Load Rev. Tons.	Train Load Total Tons.	Locomotive Car Miles	Car Load Rev. Tons.	Car Load Total Tons.	Ton Miles per Mile of Road.

That the trainload is no higher arises, of course, from the mountainous nature of the territory served. This places the Company at a disadvantage in competitive business, but as compensation for this the Denver has exclusive access to the rich State of Colorado, and has a very large business in precious ores, fruit, and vegetables. This traffic is expensive to handle, and, therefore, it is not surprising the average freight rate is relatively high, that for the past year having been 1.186c.

In the current fiscal year the traffic of the Denver is showing distinct improvement, there having been a gain of $314,000 in gross receipts for the September quarter. Whilst some of this improvement arises from increased passenger travel in connection with the Panama-Pacific Exhibition, it is also due to a larger quantity of freight tonnage now coming forward for shipment. The prosperity of the Denver is allied not only to that of Colorado, but to Utah also, and, with more active conditions prevailing in those States, the quantity of precious ores carried this year should largely increase. Further, the Denver cannot fail to benefit from the bumper crops of this year, which

will be marketed at high prices, and to derive advantage from the activity that prevails in the manufacturing industries of the country. Further continued savings are contemplated in conducting transportation, and although maintenance outlays may be larger than for last year, the greater portion of any gain in gross earnings may be saved as net, and in the absence of additional interest and other charges may go to swell net profits. The gain of $134,000 in gross receipts for July and August was accompanied by an addition of $336,000 to the net earnings and of $317,000 to the net profit.

Thus, apart from any improvement in the remaining months of the year, the profits of the Denver are equal to about 3% upon the Preferred stock. It is, of course, patent that in present circumstances no dividend is to be looked for upon this stock. The trend of the results of the Denver will be followed with interest in the current year, but chief attention will be directed to the progress made in rehabilitating the finances of Western Pacific, for the settlement of the relationship between the two undertakings will naturally have an important bearing upon the future prosperity of the Denver.

The amounts and prices of, together with the yields afforded by, the Company's securities will be evident from the following statement:—

GRAND TRUNK RAILWAY.

After having deferred the matter for some time, probably with a view to obtaining a better idea of the magnitude of the crops and the trend of traffic, the directors of the Grand Trunk Railway, at the close of last week, announced a dividend at the rate of 3% upon the Guaranteed stock for the June half of this year. This stock is entitled to non-cumulative dividends of 4%, which were regularly forthcoming for each half-year from January 1898 to December 1913, with substantial margins with which to pay dividends on the three classes of Preference stock. Dividends on the Guaranteed stock are dependent upon the results of each calender year. For the first half of 1914 the Guaranteed stock received its full rate of dividend; but in the latter half of the year, with the disturbance to general conditions in Canada as a result of the War having followed upon the depression in trade that had already existed, and in view of the large addition to interest charges and the heavy shrinkages in the income of subsidiary lines, the profits were so poor that the rate of distribution on the Guaranteed stock was reduced to 3%. Hence the stock received only 3½% for 1914, the profit earned having been £425,000, or some £12,000 less than the sum needed to pay the dividend.

So far as the current year is concerned, gross earnings have continued to fall off; but by substantially curtailing operating expenses some addition to net earnings has been secured, the gain in the net earnings of the Grand Trunk proper and of the Detroit line for the eight months to August having been £51,000. This improvement in net earnings is, however, much more than offset by the addition to interest and other charges, which we estimate for this year will be about £118,000 in excess of those for 1914. Hence, apart from any further improvement that may occur in net earnings in the last four months, the net profit for 1915 is estimated at £358,000, equal to almost 3% on the Guaranteed stock. It has, however, to be recollected that during the remaining months of this year comparison will be made with exceptionally poor results in the last four months of 1914, and, further, that the movement of the great grain crops of this year is expected to bring considerable additional traffic to the line. These factors will, of course, favourably affect the gross earnings, but how far their influence will be reflected in the course of net earnings we cannot say. Nevertheless, further improvement in net receipts is looked for, and, inasmuch as present indicated profits are just about equal to the present rate of distribution on the Guaranteed, it would appear as if ability to pay more than 3% on the stock for the year would depend upon the extent of the gain that may be secured in net earnings in the four months to December 31 next. As far as we can calculate, net earnings must increase in this period by about £142,000 to permit of the payment of the full 4% on the Guaranteed. Our estimate of profits for 1915 on the basis of results to August 31 is as follows:—

Present Indicated Profits of Grand Trunk System, 1915.

	£	£
Surplus after interest and other charges, 1914		425,000
Add Increase in net earnings of Grand Trunk Proper and Det., Gd. Haven and Milw. 8 months to August 1915		51,000
Total		£476,000
Deduct Estimated increase in deficit of Grand Trunk Western, year to June, 1915	£10,000	
On extra 4% Debenture stock	£15,000	
On 5½% Debenture stock 1 Dec. 1914 to 1 Dec. 1915	55,000	
On 5½% Debenture stock 1 Dec. 1915	28,000	
	108,000	
Total Deductions		118,000
Estimated surplus, 1915		£358,000*

* Equivalent to about 3% on the Guaranteed stock. For full 4% on Guaranteed stock to be earned net earnings must increase £142,000.

The announcement of the dividend has caused an improvement in the price of the Guaranteed, which now stands at 61¼, at which the yield from the 3% dividend is £5 0*s.* 5*d.* per cent. The prices of the 1st, 2nd, and 3rd Preference stocks are 59½, 47½, and 24 respectively. The Ordinary is quoted at 10¼.

NATAL-ZULULAND RAILWAY.

This Company is able to pay a final dividend in respect of the past year of 1%, making, with the interim dividend already paid, 2% for the year, or the same as for 1913-14. The line is at present worked by the Natal Government for a fixed sum of £13,500, which it hands over to the Company quarterly in full satisfaction of all outstanding claims under its original guarantee, such payments to continue until the line is expropriated. The right of expropriation is vested in the Government for an agreed sum of £350,000, and can be exercised at the expiration of completed periods of 10 years, reckoned from June 30, 1907, on giving twelve months' notice. Last year's net revenue balance, after providing for interest on the First and Second Debentures, was £2,682, a sum equal to about 2½% on the share capital. The dividend of 2% calls for £2,163, and there is thus a surplus of £519, which, added to the balance of £733 brought in from 1913-14, leaves an undivided surplus of £1,252 to be carried forward. The only stock officially quoted is the 3% First Mortgage Debentures, the price of which is about 66. The sum which the Government has agreed to pay for the property is equal to the issued amount of Debenture capital.

Calcutta Electric Supply Corporation. Interim dividend on Ordinary at rate of 7% per annum.

Langkat Sumautra Rubber Co. Interim dividend of 7½% (actual).

FOREIGN RAILWAY RESULTS.

CENTRAL URUGUAY RAILWAY.

THE directors of the Central [illegible] Company have decided to pass the dividend on the Ordinary stock in respect of the past year. From the statement issued it would appear that the cost of working has been relatively heavy, for with a diminution of £76,000 in gross receipts the decline in profit comes out at over £70,000, the divisible surplus being only £3,791, as against £74,220. In the preceding twelve months an interim dividend at the rate of 5% per annum was paid in April, but no final distribution was made, so that the dividend for the year was 2½%, with a balance forward of £54,132. This balance is now increased to £57,923. The severity of the crisis through which the Company has passed will be evident from the following statement of the net results of working for the last five years:—

	1914-15.	1913-14	1912-13	1911-12	1910-11
	£	£	£	£	£

Dividend [illegible]	44	[illegible]	[illegible]	[illegible]	[illegible]
Profit for Ordinary	3,791	74,220	158,242	136,225	110,487
Ordinary dividend	Nil	50,000	125,917	115,917	101,792
Rate per cent.		[illegible]	[illegible]	16	[illegible]
Balance	3,791	[illegible]	32,325	20,308	8,695
Brought forward ...	54,132	29,912	12,587	7,279	[illegible]
Total surplus	57,923	54,132	44,912	27,587	17,279
To [illegible]			15,000	15,000	10,000
Carried forward ...	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Until the financial and economic crisis, which commenced early in 1913 and has continued ever since, the development of Uruguay was proceeding rapidly, thanks to the enterprise of both the Government and the railway companies, and although a severe check has been given to the prosperity of the country, which it may take some little time to fully regain, there is no doubt that the present demand for Uruguayan produce of all descriptions, and the high prices that are being obtained, will give a fillip to industrial enterprise throughout the country and bring about a steady revival of commercial activity. In this activity the railway companies will share, and the Central Uruguay, with its wide field of operations, will be among the first to benefit. Since the commencement of July the earnings of the line have continued to recover, and for the 14 weeks to October 2 the increase amounts to £27,858 on the main line and to as much as £50,170 on the combined system. Here are the figures:—

Traffic Receipts, 14 Weeks to October 2.

	1915	1914	Increase	
	£	£	£	%
Main Line ...	[illegible]	115,168	[illegible]	[illegible]
[illegible] Extension	45,621	[illegible]	+12,355	+37·1
Northern Extension	23,846	18,657	+ 5,189	+27·8
Western Extension	20,469	15,701	+ 4,768	+30·3
Total system ...	[illegible]	182,792	+50,170	+27·4

The price of the Ordinary stock is about 60, a figure which clearly shows the confidence of holders in the immediate future of the Company, a confidence which we think is not misplaced. The 5½% Preference shares of £10 each have recently changed hands at 7⅞, and at the price they yield the investor as much as £7 4*s.* 9*d.* per cent. Although the margin of profit behind the dividend has been reduced almost to vanishing-point, the prospects of recovery are so satisfactory that shareholders may regard their investment as fairly secure, seeing that the worst that can happen to the Company has now apparently been experienced.

CENTRAL URUGUAY EASTERN EXTENSION.

The Extension Companies of the Central Uruguay Railway have been less affected by the trade reaction than the parent undertaking, owing to their working agreements with the Central Company and the guarantee arrangements with the Government. Consequently, whilst their earnings show considerable decline compared with the preceding year, the loss of profit has been relatively small, and fairly substantial dividends are forthcoming. The Eastern Extension Company reduced its interim distribution in respect of the past year from 3½% to 3% per annum, and is now able to pay a balance dividend at the rate of 2⅛% per annum, making 2⅝% for the year, as against 3¾% for 1913-14. Three years ago the dividend was 5¾%, but then the Company was doing exceedingly well, and the amount received from the Government was comparatively small. Last year the Government guarantee realised upwards of £25,000, as against £17,000 in 1913-14 and under £8,000 three years ago. Consequently, although the Company's traffic receipts last year declined over £28,000, and the falling off in profit is under £13,000, the divisible surplus being £19,751, as against £32,611. The dividend, less tax, absorbs £21,446, and the deficit of £1,695 is made good out of the balance brought in from 1913-14, and the amount carried forward is lowered from £3,238 to £1,543. The profits of the line for the last five years are set out beneath:—

The dividend record of the Company for a number of years is appended:—

Central Uruguay Eastern Extension.

	1914-15	'13-14	'12-13	'11-12	'10-11	'09-10	'08-09	'07-08	'06-07	'05-06
	%	%	%	%	%	%	%	%	%	%
Dec. half	3	3½	1½	4½	1¼	3¼	4½	4	4	4
June half	2¼	4	...	4½	6¼	5¾	4¼	5	5	5
Year	5¼	3½	4½	5	5½	5½	8¾	9	9	9

The price of the £10 Ordinary shares is about £4 6*s.*, and the dividend of 2⅝% affords a yield of £6¼%. The £10 5% Preference shares are quoted at 6⅝, and the yield is as much as £7 17*s.* 6*d.* per cent.

CENTRAL URUGUAY NORTHERN EXTENSION.

[illegible] Company [illegible] dividend of 4*s.* per share, making, with the interim dividend paid in April last, 8*s.* per share, or at the rate of 4% per annum, carrying forward a balance of £2,814. Twelve months ago the dividend was also 4%, but the balance carried forward amounted to £4,578. In other words, the dividend has not been fully earned, and the balance brought in from 1913-14 has been trenched upon to the extent of £1,764 to make good the deficiency. The Company had a decrease in traffic receipts of about £31,000, whilst the loss of profit amounts to only £6,400. The following table shows how the profits of the line are made up:—

Central Uruguay Northern Extension.

	1914-15*	1913-14	1912-13	1911-12	1910-11
	£	£	£	£	£
Gross receipts	90,300	121,572	147,143	122,361	106,455

* [illegible]

The highest dividend paid by the Company in recent years is 4¾%, distributed in 1911-12, and again in 1912-13, and the fact that it has been able to distribute 4% in a period of such financial and economic difficulties as have been experienced in the past two

years clearly demonstrates the stability of the undertaking under its present working and guarantee agreements. The dividend record of the Company for a number of years is set out beneath:

Central Uruguay Northern Extension.

	1914-15	'13-14	'12-13	'11-12	'10-11	'09-10	'08-09	'07-08	'06-07	'05-06	'01-05
	%	%	%	%	%	%	%	%	%	%	%
Dec. half	4	4	4	1½	4½	5	5	1	1	4	1½
June half	4	4	5	5	4½	3	5	3¾	4	4	4
Year	4	4	4½	4½	4½	5	5	3¾	4	4	4½

With the price of the £10 shares in the neighbourhood of £4 17*s.* 6*d.* the yield from the dividend of 4% is well over £5 %.

CENTRAL ARGENTINE RAILWAY.

To what extent the profits of the Central Argentine Railway have been affected in the past year by the decline of £270,000 in traffic receipts is not yet disclosed. The dividend is maintained at 5% on both the Consolidated Ordinary and Deferred stocks, but in the absence of further data until the report is issued it is impossible to tell how the Company has really fared. Interest charges have been heavier, owing to the issue of £1,000,000 short-term notes in November last; but the strength of the position lies in the fact that, by reducing the dividend twelve months ago from 6% to 5%, the relatively large balance of £440,000 was brought into the accounts, which has doubtless enabled the lower rate of distribution to be maintained. The Company is benefiting from the big maize crop of the past season, and in the first 14 weeks of the current year its traffic receipts have risen by over £192,000, or 14.5%. The bulk of the crop has now been exported, but sufficient remains to keep the Company busy for some time to come, and, as the outlook for wheat, oats, and linseed is reported to be very satisfactory, a continuance of expanding earnings may be confidently anticipated. With the price of the Ordinary stock at 83½, the yield from the dividend of 5% is about £6 3*s.* 5*d.* per cent. The Deferred stock is quoted 74 and yields as much as £7 4*s.* 11*d.* per cent.

BEIRA RAILWAY.

The European War is having a serious effect upon the working results of the Beira Railway Company. The annual report just issued is for the twelve months to September 30, 1914, and although barely two months of war conditions had then been encountered, the results shown are disappointing, a net profit of £7,420 only having been earned, as against £52.700 twelve months previously. The analysis of traffic for the year shows that the gross earnings of the Beira-Salisbury section declined £136,775, or 21%, against which there was a reduction in expenses of only £25,858, leaving the net earnings some £110,917 smaller than in the preceding twelve months at £299,339. Apart from the effects of the War upon general business, the decrease in gross revenue is chiefly due to the falling-off in mining machinery for Rhodesia and construction material for railway extensions in Rhodesia, which made up the increase in traffic of the preceding year. However, it will be seen from the table appended that both the gross and net earnings of 1913-14 are the smallest since 1909-10:—

Beira Railway.—Beira-Salisbury Section.

Year to Sept. 30	Gross Revenue	Working Expenses	Ratio	Net Revenue
	£	£	%	£
1914	498,578	199,239	39.9	299,339
1913	635,353	225,097	35.4	410,256
1912	513,140	206,816	40.3	306,324
1911	555,524	173,107	31.2	382,417
1910	436,296	142.807	32.7	293,489
1909	314,222	129,323	41.1	184,899
1908	230,420	110,122	47.7	120.298
1907	207,825	123,573	59.4	84,252

It should be pointed out that the profit of £7,400 shown to have been earned for the year is after making provision to the extent of £15,000 for depreciation and renewals, and after writing off £3,164 in respect of depreciation of investments, so that the margin behind the Company's interest and other charges is greater than it appears at first sight. It is to be feared, however, that this margin has entirely disappeared in 1914-15, the revenue returns of the Beira to Salisbury line for the ten months to July 31 showing a further shrinkage of £164,000 in gross receipts, and a drop of £111,000 net. The 6% Income Debenture stock received its full rate of interest for the year 1913-14 in May last, but whether or not it will get its full 6% in respect of the past year is open to doubt, having regard to the heavy falling-off in earnings so far recorded. The last dealing in the stock took place in March last at 65. The price of the 4½% Mortgage Debentures is about 73.

SOUTHERN SAN PAULO RAILWAY.

After some delay the completion of the Southern San Paulo Railway is *un fait accompli*, the final section of 25 kilometres having been taken over from the contractors on April 20 last. The line extends a distance of 101 miles from the city and port of Santos, in the State of Sao Paulo, to Santo Antonio do Juguá, and a through service was inaugurated in May last. The financial crisis in Brazil and the unsettled state of affairs the world over are naturally having an adverse effect on the working of the line, which last year resulted in a loss of about £4,000. Fortunately, the Company enjoys a guarantee from the Government, which on the completed line amounts to 691.2 contos of reis, equal at 16*d.* exchange to £46,000, or just sufficient to cover Debenture interest. The amount received during the past year in respect of the line so far then completed was 606.5 contos, which, taking exchange at an average of 14*d.*, realised £35,573, or about £9,500 short of the sum needed to pay the interest on the Debentures. In consequence of this position the Debenture-holders in July last agreed to accept 6% Income Debenture stock in lieu of payment in cash of the last February and August coupons, and subsequent interest in like manner should such a course be necessary. The shareholders have sanctioned the creation of this stock to an amount not exceeding in the aggregate £300,000, and it ranks as a second charge on the property and undertaking of the Company. Under the circumstances now obtaining it is impossible to give a reliable forecast as to the immediate prospects. The completion of the line brings the railway into steamboat communication with Iguape and the Valley of the Ribeira, and a large proportion of the rice crop, roughly estimated at about 4,000 tons, and which at present is exported from Iguape, is expected to be diverted over the Company's rails. Moreover, attention is being called to Brazil as a meat-producing country, and shipments of chilled meat have already been made, and should this business become important and it is more than probable, writes the General Manager, that the rich lands of the Valley of the Ribeira will be taken advantage of, which would result in a steady revenue to the railway. The price of the Company's 5% Debentures is about 35, as against 74½ quoted at the end of July of last year, prior to the outbreak of war.

BARSI LIGHT RAILWAY.

The announcement is made by the Barsi Light Railway Company of a final dividend in respect of the year to March last of 3%, together with a bonus of 1%, making with the interim dividend already paid a total of 8% for the twelvemonth. This compares with 10% distributed a year ago. The War has affected the Company adversely, for whilst the crops have been above the normal the movement of goods has been restricted owing to the difficulty of arranging shipments from Bombay, and the consequent cessation of demand in that market for produce. The falling off in gross earnings was as much as Rs. 1,68,450, and the diminution in profit is about

£14,000, or 30%, compared with 1913-14. Nevertheless, the sum available for distribution amounts to over £29,000, equal to a dividend of 14½% on the shares; so that after distributing 8% there is a surplus of £13,000. Out of this the directors have transferred the sum of £11,400 to reserve account for the equalisation of dividends, &c., and have added £1,700 to the balance carried forward, which is thereby raised from £13,244 to nearly £15,000. From March last until the middle of July the Company continued to lose traffic, but since then there has been considerable improvement, and apparently the produce held back from lack of shipping facilities is now coming forward in large quantities. For the 15 weeks to July 17 there was a decrease in earnings of Rs. 1,31,900, but the diminution at the beginning of September was only Rs. 48,300, so that the Company is picking up well.

The short extension into Pandharpur City was opened for traffic on July 16, and the "Willingdon Bridge" over the Bhima River was formally opened by his Excellency the Governor of Bombay on July 29. Further extensions of the line from Pandharpur are in contemplation, and the directors announce that all the crucial points in connection with the concessions for the extensions to Lonand and to Miraj have now been settled with the India Office.

The improvement in traffic now being shown, together with the fact that last year's profits were equal to 14½% on the Ordinary shares, clearly indicates that any further cut in the dividend will not be necessary, but that the distribution of 8% will be at least maintained in the current year. The price of the £10 shares is about 11½, and the yield from the dividend of 8% is as much as £7 5*s*. per cent.

THE 50% EXCESS PROFITS TAX.

The Chancellor of the Exchequer on the occasion of the introduction of the Budget stated:—

"It is proposed to introduce a special tax in respect of profits which have increased during the war period. The tax is to extend to all trades, manufactures, concerns in the nature of trade and businesses, including agencies, whose profits for any business year of account ending on any date between September 1, 1914, and July 1, 1915, exceeded the profits on the income-tax assessment by more than £100."

To make the method of calculating the excess profit quite clear we may quote the instance given by Mr. G. A. Touche, M.P., in the House of Commons on September 28. A manufacturing concern makes the following profits:—

Year to Dec. 31	£
1911	15,000
1912	20,000
1913	30,000
Total	65,000

The average of the three years to be taken for assessment for the year 1914-15 is, therefore, £21,600. The earned profits for the year to December 31, 1914, being £35,000, such profits coming in a year ending between the defined period, September 1, 1914, and July 1, 1915, the excess profit taxable would be £13,400, less the £100 allowed, and the 50% tax would therefore be £6,650.

In reply to a question, the Chancellor stated that this tax would apply to English companies working gold and other mines abroad. We think there may be a little disappointment at the amount that may be derived from this class of industry, for the reason that many important mining companies are Colonial or foreign registered. Of the important gold-producing companies of the Rand the bulk are registered abroad, and we take it the new tax would not apply to them, as they have already to bear the taxation of the country of their registration. Among the few that are English-registered are the Van Ryn, Village Main Reef, and Durban Roodepoort. The first is fairly important, the second is nearing the end of its life, while the third, with a short life, is not of great consequence. It has been stated that an allowance will be made for "obsolescence," and presumably these, and all other mining companies coming within the scope of the Act, supposing they earned excess profits, would be taxed, with due regard to life considerations

Of investment companies holding the shares of Rand mining companies, there are a fair number which are registered in England, including the Anglo-French Exploration, Central Mining and Investment, Consolidated Mines Selection, Consolidated Gold Fields and several companies of similar character associated with it. Among the investment companies which are Transvaal-registered are the Rand Mines, Johannesburg Consolidated, and A. Goerz and Company. There are others, both English and South African registered; but these are of less importance.

As to Indian and West Australian mining companies which are English-registered, no special war profit of any appreciable extent is likely to accue in the aggregate. The majority of other Australasian companies are Colonial-registered. Paying the taxes of the country of their registration, they, of course, would not be expected to bear the burden in this country as well. Some exceptions are the British Broken Hill, Zinc Corporation, and Sulphide Corporation, and the first two, at any rate, will hardly be affected.

Most Canadian mines, with the exception of the Canadian Mining Corporation, are not English-registered.

The Oroville, Nechi, and Plymouth Consolidated Companies will presumably ultimately be affected. The allowance of 6% return on capital and life considerations precludes the possibility of any large sum being handed to the Government. The same remark applies to the recently progressive West African and Rhodesian producers, such as the Abbontiakoon, Prestea A, Taquah, and Shamva. The Rio Tinto and Arizona Copper Companies, with heavy profit decreases in 1914, will apparently not have to contribute at present. There are few other English-registered copper companies.

The position of the tin-mining industry is so poor that any appreciable sum being derived from tin companies is out of the question.

It is of interest to note these features, as the idea is pretty generally held that the great variations in prices of base metals will benefit many companies and yield a substantial amount of excess tax to the Exchequer.

SHEEPBRIDGE COAL AND IRON COMPANY.

During the twelve months to June 30, 1915, the Sheepbridge Coal and Iron Company was not able to secure quite as large profits as it did during the previous year, which was its jubilee. Nevertheless, the reduction is comparatively small and has had no effect on the distribution. It might have been expected possibly that having regard to the high prices at which coal had been standing the profits would have worked out on a higher level, but while it is true that the price of coal has risen considerably it should be recalled that the coalowner has not received the whole of the increased price, and, as a matter of fact, there have been two adverse factors which have counterbalanced the rise in price. First of all, the output of coal has been seriously diminished owing to the large number of men who have joined His Majesty's Forces. Beyond this there has been a considerable increase in the working cost owing to the war bonus paid to the workmen and the higher prices of timber and stores. The ironworks have been similarly affected, and, in addition, the cost of pig iron has been greatly increased by the rapid rise in the price of coal. On this point Lord Aberconway said

at the meeting on September 27 that, while prices were no doubt at a higher level now than they were six or twelve months ago, costs had very materially risen, and were likely to rise still more, and the effect of legislation in cutting down prices at the pit and restricting the export of coal to neutral countries would, of course, be to reduce the margin of profit to the coalowner. Another feature was emphasised by the Chairman, who pointed out that the men were not working as well as they might, and they got such high wages that they could afford to play at the end of the week. It is pointed out that the Coal Conciliation Board has been renewed for three years from May 1, 1915, and it has been arranged that the basis upon which wages are to be calculated in future shall be the amount paid in 1911, when they were 50% above the basis of 1888. A war bonus has been given to all ironworkers and colliery employees, the latter receiving 15½% on the gross earnings, which is equivalent to 25½% on the basis of 1888. In the circumstances, therefore, it is not surprising that the profits for the twelve months to June 30, 1915, have only reached £184,946, as compared with £232,524 for the previous year.

The Company ranks among the oldest of our iron and coal companies, being formed as far back as September 1864. It owns freehold ironworks covering about 130 acres near Chesterfield, two leasehold collieries near Chesterfield and Mansfield, ironstone mines in Lincolnshire, Rutlandshire, and Northamptonshire, upwards of 3,000 railway waggons, a controlling interest in the Rossington Main Colliery Company, Limited, Dinnington Main Colliery Company, Limited, Maltby Main Colliery Company, Limited, and Langwith Bye-Product Company, Limited, and half the capital of the Newstead Colliery Company, Limited. The Rossington Main Colliery Company owns an underlease of the Barnsley and other coal seams underlying 8,000 acres of land near Doncaster. It has an authorised capital of £500,000 in 125,000 "A" and 375,000 "B" shares of £1 each, of which 255,000 "B" shares were subscribed for by the Sheepbridge Company and 120,000 by John Brown and Company, Limited. Both classes of shares rank alike in every respect. The Dinnington Main Coal Company was formed in November 1900, and has an authorised capital and issued capital of £287,500 in 275,000 Ordinary shares and 12,500 Deferred shares of £1 each. The Maltby Main Colliery Company was formed in 1907, and owns coal leases over 6,000 acres in the West Riding of Yorkshire; the authorised and issued capital is £350,000 in £1 shares, of which 200,000 are held by the Sheepbridge Company.

Last year it was announced that the directors, having received a favourable offer for the acquisition of a coalfield adjoining about 9,000 acres of the Barnsley seam lying immediately to the east of the Dinnington coalfield, had entered into an agreement for the acquisition of leases and options in a new company called the Firbeck Main Collieries, Limited, which has a nominal capital of £450,001. Of this the Sheepbridge Company agreed to subscribe £150,001 towards a first issue of £300,000. The leases are practically completed, and steps are being taken for the provision of a branch railway to the site of the proposed colliery. The agreement carries with it the obligation for a transfer to the Dinnington Company of leases and options of the Barnsley seam underlying a further area of about 2,000 acres adjoining the Dinnington Company's area, and within workable distance of their existing pits.

It is now stated that some of the leases of the Firbeck coalfield are completed, and the remainder are practically settled. A Bill for the construction of a railway was passed last Session by a Committee of the House of Commons, but arrangements have since been completed for the provision of the necessary railway accommodation by the railway companies concerned. It will thus be realised that the Company has taken steps for the acquisition as far as possible of coalfields to take the places of those that are becoming exhausted in the old Sheepbridge properties. Two properties have been exhausted some time, and the announcement is made in the present report that a further colliery which has been working for 47 years was closed in September 1914, in consequence of the exhaustion of the top hard seam. As a result of this policy of expansion an increased capital has been called for, and an issue of 286,826 new Ordinary shares was made in May 1914, at a premium of 10*s.* per share. Calls have been made of 12*s.* per share during the past twelve months. It is intended to make a further call early in the year 1916, and the last call later in the same year. The nominal capital of the Company is £1,250,000, of which there has been issued the following:—

	£
112,275 Cum. Pref. shares £1 each, fully paid	112,275
137,725 „ „ „ 8*s.* „	55,090
549,700 Ord. shares of £1 each, fully paid	549,700
New issue of 286,826 £1 each, 4*s.* paid	114,700
Calls paid in advance	29,300
Total	861,065

In addition to the above share capital there is also in issue £100,000 of 5% First Mortgage Debenture stock. It may be added that the Preference shares are entitled to a cumulative dividend of 5%, and to rank with the Ordinary shares after the latter have received 5%. Inasmuch as during the last 16 years the Ordinary shares have received this minimum 5% or more, the distribution on the Preference shares during this period has been at the same rate as that on the Ordinary shares. The Company has received by way of premiums on new shares a sum of £72,297. This has been written off the property account. Moreover, it had set aside a reserve fund for development of new properties amounting to £250,000, but of this £200,000 has been appropriated to calls paid on shares in the Rossington Main Colliery Company, Limited, thus leaving only £50,000 to the credit of this account, but it will be enlarged to £120,000 by an allocation of £70,000 from the profits of the year to June 30 last. There is also a general reserve fund of £80,000. Herewith we set out a summary of the liabilities and assets as at June 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital ...	861,045	Property, &c.	783,462
5% Debenture stock ...	102,083	Stock of loose plant, &c. ...	126,908
Sundry creditors, &c. ...	102,780	Sundry debtors	122,940
Reserve funds	130,000	Loans	345,000
Profit and loss	193,050	Cash in hand...	11,248
	1,389,558		1,389,558

As already indicated, the profit for the past twelve months has amounted to £184,946, as compared with £232,524 for the previous year. Debenture interest has called for £16,550, the Preference dividend £25,104, and the Ordinary dividend £94,266; the rate of distribution in each case being 15%, the rate which was distributed twelve months ago. After allocating £70,000 for further developments the balance carried forward amounts to £44,070, as compared with £65,045 brought in.

In the following table we set out the profits and manner of distributing them for each of the past eight years:—

Year ended June 30	Profit	Depreen. and Interest	Dividends — Prefce. Amt.	%	Ordinary Amt.	%	Further Devlpmnts, &c.	Carry-Forwd.
	£	£	£		£			£
1915 ...	184,946	16,550	25,104	15	94,266	15	70,000	44,070
1914 ...	232,524	15,432	25,104	15	82,455	15	70,000	65,045
1913 ...	257,803	12,807	33,473	20	109,939	20	100,000	25,513
1912 ...	101,035	10,455	16,737	10	54,970	10	30,000	23,829
1911 ...	109,501	10,692	16,737	10	54,970	10	25,000	35,056
1910 ...	87,365	10,701	12,553	7½*	41,227	7½*	25,000	32,954
1909 ...	108,238	10,736	12,553	7½*	41,227	7½*	30,000	35,070
1908 ...	180,250	10,771	20,921	12½*	68,712	12½*	70,000	21,348

* Tax free.

The Chairman is of opinion that the price of coal will keep up during the War, but that the high cost of production will also keep up, so that the margin

of profit will probably not be very seriously different from what it is at present. Altogether, therefore, it would seem as though the Company will do very well if it is able to keep up its profits at approximately the figure touched for the past twelve months. Largely it will depend on a sufficiency of labour, and, consequently, the maintenance of output. The question of a shortage of output is one of importance not only to the Company itself but also to the country as a whole, and Lord Aberconway did good service in referring to this point in his speech of September 27. He said: "The really important point to consider was the position of the coal trade as affecting the finances of the country during the War. The Sheepbridge group formed a very important element in the production of coal, and their turnover had been much reduced. Coal, pig iron, ironstone—everything except finished iron—had shown a reduction in output. That naturally meant a smaller profit. The capacity for production had enormously diminished during the War. From Sheepbridge and its subsidiary concerns 2,350 of their best men had enlisted, and what was true of Sheepbridge was true of every colliery in the country. He was sorry to say that the men who remained at home had not always worked their best. Higher wages in the coal trade did not, apparently, mean better work. How was this shortage of output affecting our national finances? Italy, Egypt, and the Argentine were some of our best consumers for coal, and if collieries had worked to the fullest extent we should have been able to sell to these countries as much as in the previous year. Instead of that, we had not been able to deliver the coal. Altogether in those three countries alone our sales had been reduced by four million tons, which meant a serious loss to this country. When they considered the difficulty we were in in paying huge sums to the United States, and sending gold to buy the munitions of war, was it not the duty of every Englishman to work his level best to promote our exports? The coal question was not merely one for their own pockets, it affected the financial position of the country. With regard to the finances of the Sheepbridge Company they had to look forward to further expenditure at Rossington, Firbeck, and Glapwell, and also in connection with the Newstead Colliery, but with the funds already in hand and the further amount to come in next year from the new shares they were in a strong position to face the future."

Recent prices of the shares on last year's distribution give the following yields:—

"Salt in Cheshire." An exhaustive work by Mr. A. F. Calvert. A most interesting subject for consideration in normal times, but we doubt whether many persons will care to plough their way through 1,200 pages on such a subject in times like the present (E. and F. Spon, Limited, 57 Haymarket. 21s.)

Hudson's Bay Company.—The sales of farm lands by the Hudson's Bay Company for the quarter year ending September 30, 1915, amounted approximately to 10,900 acres for £31,900, as compared with 1,300 acres for £3,700, and sales of town lots to £1,800, as compared with £150 for the corresponding period of 1914. The receipts are £28,600, as against £40,800 in 1914. The sales for the six months to September 30, 1915, are 19,500 acres for £63,000, and town lots were sold for £3,900, as compared with sales of farm lands 5,500 acres for £20,100, and town lots for £3,600 for the corresponding period of 1914. The total receipts for the six months ending September 30, 1915, amount to £72,000, as compared with £127,300 for the corresponding six months of last year.

Insurance Notes.

YORKSHIRE INSURANCE COMPANY, LIMITED.

This Company was established with headquarters in York in 1824, and for many years antecedent to recent developments was one of the best representatives of a class of sound provincial fire and life offices which were formerly considerable in number, but which have practically ceased to exist. Much of the business was built up through influential local connections, forming a solid nucleus for subsequent extensions. The Yorkshire has absorbed during the last few years a number of other companies, and its activities now cover every section of insurance business transacted by joint-stock companies. Its financial policy has been skilful and successful. Dividends at a high rate, although well within the Company's earning power, have enabled the directors to increase the capital from time to time on advantageous terms, and the reserves have been maintained at a high standard. The authorised capital amounts to £1,000,000. The subscribed capital was increased in 1914 from £784,525 to £845,856, and the paid-up capital from £96,452 10s. to £125,289, there being on December 31, 1914, 160,126 shares of £5 each with 10s. paid and 45,226 fully-paid shares of £1 each. As the result of the operations in 1914 the dividend is maintained at the rate of 50%, free of income tax, on amounts paid-up on both denominations of the shares. As will be seen from the following analysis of the year's accounts, the dividend has been nearly provided out of interest earnings, apart from those on the life fund, and the total profits of the year have permitted a larger sum than that required for the distribution of the dividend to be applied in strengthening the reserves in various ways. Each department shows a substantial profit, which is a very satisfactory outcome in a year which was beset by special difficulties. Indeed, the Company's report, taken all round, is one of the best that has been issued for 1914 by offices engaged, like the Yorkshire, in comprehensive insurance business. A quinquennial valuation of

the Company's life department fell due on December 31, 1914. In this section the shareholders have a comparatively small pecuniary interest, but the results must be gratifying to the Company's participating policyholders, for bonuses are maintained at the standard announced five years previously, despite the difficulties attendant on providing for depreciation in securities.

In this review of the accounts for 1914 first place may be given to the life department, in view of the actuarial investigation referred to. The Company's new life business in that year amounted to £659,464, of which £55,621 was reassured, the net retention at its sole risk being £603,843, as compared with £645,670 in 1913. About 95% of the net new business in 1914 was effected within the United Kingdom. The total net life premium income, increased by £14,105, amounted to £209,675, apart from a sum of £70,002 received as consideration for new annuities granted. After making a reasonable adjustment for the cost of the annuity business, the expenses of management, inclusive of commission, seem to have absorbed about 13.2% of the premiums, which is less than the average expense ratio in British life offices. Claims by death amounted to £82,474, as compared with £74,027 in 1913. Endowment assurances for £27,160 matured by survivance. The sum of £32,693 was transferred to investment reserve for depreciation in securities from the life fund, which on December 31, 1914, amounted to £2,595,435, showing an increase during the year of £147,051. Apart from a profit on reversions amounting to £13,264, the interest earnings on the life fund taken into the year's account amounted to £104,465, after deduction of income tax, indicating a net yield of about £4 4s. 7d. per cent.

The quinquennial valuation, as five years previously, was made by the O^M and $O^{M(5)}$ Tables for ordinary policies, and by the O^M Table for endowment assurances, in combination with 3% interest and net premiums, special reserves being made for various purposes. Annuities were valued by the British Offices' Annuity Tables at 2½% interest. On this basis the disclosed valuation surplus amounts to £212,400, of which £150,000 is distributed—£135,000 to participating policyholders, and £15,000 to shareholders—the balance of £62,400 being carried forward as a provision against there being an adverse mortality experience during the next quinquennium in consequence of the War, or any further depreciation in the value of securities. The directors announce that the amount allotted to participating policyholders gives the same average bonus as on previous occasions, the method of division providing for an increasing reversionary bonus having been maintained. The bonus continues to average over 30*s.* per cent. per annum.

The results in the commercial departments of the Company's business, after adjustment of reserves for unexpired risks, are as follows:—

Fire Department.—Premiums (increased by £7,512), £455,800; trading profit, £32,297 (about 7.1% of premiums); interest profit, £7,794.

Accident Department.—Premiums (increased by £1,112), £14,986; trading profit, £2,289 (about 15.3% of premiums); interest profit, £445.

Employers' Liability (within United Kingdom).—Premiums (increased by £2,748), £106,174; trading profit, £15,860 (about 14.8%); interest profit, £2,723.

General Insurance.—Premiums (increased by £11,292), £308,420, of which £34,090 related to term and transit risks in the live-stock insurance section expired within the year; trading profit, £25,586 (about 8.3% of premiums); interest profit, £5,928.

Marine Insurance.—Premiums (increased by £68,230), £430,047; trading profit taken into account, £22,254. In regard to this it may be pointed out that the marine reserves have been increased from about 88 to about 106% of the premiums, so that a considerable amount of trading profit, apart from that referred to above transferred to profit and loss account, has probably been left in the funds. Interest profit, £12,746.

Profit and Loss Account.—Interest and dividends not carried to other accounts, less income tax, amount to £26,888, and out of shareholders' quinquennial profits of £15,000 above referred to £3,000 is credited to this account as the proportion thereof for 1914. On the other hand, the account is charged with expenses of £7,160 not departmentally debited.

The profits taken into the year's account appear therefore to be as follows:—

Department	Interest Profit £	Trading Profit £
Life	—	3,000
Fire	7,794	32,297
Accident	445	2,289
Employers' liability	2,723	15,860
General	5,928	25,586
Marine	12,746	22,254
Profit and loss	26,888	—
		101,286
Less expenses charged to profit and loss	—	7,160
	56,524	94,126
		£150,650

To this has to be added a sum of £57,762 representing the balance of purchase of business account, including premium on shares issued *re* purchase of the Guarantee Society, Limited, less costs, making a total of £208,412, which is thus disposed of:—

	£
To dividends payable in 1915	62,645
Added to accident fund	1,234
„ „ employers' liability fund	6,083
„ „ general fund	11,514
„ „ sinking fund	1,000
„ „ general reserve fund	17,762
Transferred to investment reserve fund ...	100,000
Added to balance of profit and loss account carried forward...	8,174
	208,412

Apart from capital, life and annuity funds, sinking fund (£52,211), investment reserve fund, and pension and guarantee fund (£11,665), and after provision for dividends payable in 1915 and for estimated liability in respect of outstanding claims in the accident and employers' liability departments, the funds carried forward to 1915 are as follows:—

	£
Fire fund	182,320
Accident fund	11,553
Employers' liability fund	67,516
General fund	151,486
Marine fund	456,550
Profit and loss balance	13,922
General reserve fund	487,885
Dividend reserve fund	20,000
Shareholders' balance of 1914 quinquennial life profits	12,000
	1,403,232

This represents about 109% of the total premium income in the fire, accident, employers' liability and general insurance departments, after deduction of premiums on policies in the last-named section expired within the year.

The total assets as shown in the balance sheet on December 31, 1914, amounted to £4,717,388. The Stock Exchange securities, in accordance with the suggestion of the Board of Trade, were taken at the mean market price of December 31, 1914, securities since purchased being taken at cost, and the directors certify that in their belief the assets set forth were in the aggregate fully of the value stated therein, after taking the investment reserve fund (£100,000) into account.

"England's Guarantee to Belgium and Luxemburg." By C. P. Sanger and H. T. J. Norton. (London: Messrs. George Allen and Unwin. 4*s.* 6*d.*)

LONDON-AMERICAN MARITIME TRADING CO., LTD.

A DISTINCTLY satisfactory first report is issued by this Company, which, it may be recalled, was formed in June 1914 to acquire from the European and Brazilian Shipping Company, Limited, of Toronto, Canada, its fleet of nine steamers aggregating some 62,600 tons. The price paid was £398,000, payable as to £150,000 in Ordinary shares, £30,000 in cash or Preference shares, and the balance of £218,000 in cash. The total share and loan capital was fixed at £500,000, divided into £200,000 of 5½% first Mortgage Debentures, £100,000 of 7% Cumulative Participating £1 Preference shares, and £200,000 of Ordinary shares of £1 each. The whole of the Debentures were issued, but £8,880 have since been redeemed. The whole of the Preference share capital is also in issue, and £150,000 of the Ordinary share capital. Six of the nine steamers, aggregating about 44,600 tons, had been under time charters to the Rio de Janeiro Tramway, Light and Power Company for some time. These charters were cancelled, and the prospectus of the Company drew attention to the fact that new charter parties had been entered into between the Company and the Rio de Janeiro Tramway, Light and Power Company, by which these six steamers were chartered at remunerative rates for periods ranging from eight to nine years. It was added that the average net profits of the six steamers, after fully providing for running expenses and maintenance in good order, and addition of management and administration expenses, together with the amount of the commissions on return freights to be earned by the Company in connection with these steamers during the period of the charters with the Rio de Janeiro Company, would average not less than £43,000 per annum, or more than sufficient to pay the full amount required for Debenture interest and redemption charges, and the 7% dividend on the Preference shares, without taking into consideration the earnings of the three other steamers. Altogether it was estimated that the annual profit before providing for redemption of Debenture interest, depreciation, management, and administration expenses, should exceed £64,300.

Special attention was naturally drawn in the prospectus to the value of the charters with the Rio de Janeiro Company, by which the earnings would be independent of fluctuations in the freight market during the period of the charters; but, as it happened, during the first twelve months the result has perhaps not been wholly in favour of the Company. The first report and statement of accounts covers a period of fourteeen months to July 31 last, and it is pointed out that at the time when the Company commenced business six of its steamers were on a time charter for an unexpired period for several years at a remunerative rate fixed for months before the War, and, in consequence, the Company has not been in a position to take the same advantage of the high rate of freights resulting from the War as have shipping companies which were in a less favourable position in normal times. And it is added, "Much to the regret of your directors, the steamers not on time charter have in consequence of a series of misfortunes been to a great extent prevented from participating in the high freights ruling in the open market. The *Rio Tiete*, having suffered heavy damage while crossing the Atlantic early in April, was compelled to remain under repair for over four months, and the *Rio Lages*, while proceeding down the North Sea, following the very restricted routes prescribed by the Admiralty, ran on the Redcar Rocks off the Tees, and has also been under repair for upwards of four months. In both cases the costs are recoverable, but the shareholders will note that during several months, at a period when freights in the open market were highly remunerative, these vessels remained in enforced idleness, and the Company was deprived of their earning powers." In addition to these set-backs, the Company has not escaped loss by the enemy, as in September last year one boat was sunk by the German cruiser *Karlsruhe*. This steamer was replaced by another, but again the Company met a heavy blow, as the newly acquired vessel had only been purchased a few days when she was torpedoed by an enemy submarine and sunk in the Channel. Altogether, for the fourteen months covered by the accounts, a trading profit of £128,009 was secured. Adding sundry receipts, and after deduction of expenses and debenture interest, there is a balance of £108,267. This enables a distribution of 11½% to be made on the Preference shares and 27% on the Ordinary shares, leaving a balance of £56,546. Of this £9,000 has been set aside for Debenture redemption reserve £25,000 to a reserve for contingencies, and £20,000 carried to general reserve. There then remains to be carried forward a balance of £2,546. This may be seen from the following:—

	July 31—1915 £
[illegible]	128,009
[illegible]	2,579
[illegible]	130,588
[illegible]	9,624
[illegible]	12,697
[illegible]	108,267
Preference dividend, 11½%	11,221
[illegible]	[illegible]
[illegible]	54
[illegible]	[illegible]

It may be added that the reserve for the redemption of Debentures, for which £9,000 has been set aside, is the sole provision for depreciation of the fleet, and the auditors' certificate is given subject to this being an adequate provision; and it may be remarked in passing that it represents less than 2% on the book value of the fleet. There are paper assets consisting of underwriting and other formation expenses amounting to £36,728, reduced by an amount of £5,500 from the profits of the year, thus leaving a balance of £31,228. Herewith we summarise the liabilities and assets as at July 31 last.

		[illegible]	[illegible]
		Cash	14,223
	643,963		643,963

At the meeting on October 7 the Chairman drew attention to the fact that, whereas at the time of the prospectus the steamers aggregated 62,676 tons dead weight, on July 31, with the same number of steamers, the dead-weight tonnage was increased to 71,510—practically 9,000 tons more than the Company started with, and it is also a fact that although the price of ships has increased enormously, yet at the date of the balance sheet, comparing the cost of the fleet with the original cost in 1914, it practically comes out at the same price per ton dead-weight. Since that date the Company has made a most satisfactory sale of their oldest steamer, and that at a price which will reduce the book value of the remaining ships, reckoned per ton dead-weight, very considerably. The Chairman added: "Our outlook in the future is promising. I think that the outlook for shipping generally must be prosperous. Tonnage has decreased, is decreasing, and during the War must go on decreasing; and, even if the War ends more quickly than any of us can hope for at the present moment, there will be an aftermath left which will take a lot of clearing away, and there will be a great deal for shipping to do. We do not know what burdens may be put upon the shipping industry. Whatever those burdens may be the shipping industry is prepared to shoulder them willingly and ungrudgingly as long as those burdens are fair and evenly distributed."

The present [illegible] £1 shares [illegible]

LINGGI-PORT DICKSON FUSION.

Extraordinary general meetings have been summoned by the directors of the Linggi Plantations, Limited, for the purpose of increasing the authorised capital from £125,000 to £200,000, and of authorising an agreement entered into with the object of the purchase of the property and assets of the Port Dickson-Lukut (F.M.S.) Rubber Estates, Limited, a scheme which has been anticipated for some little time past. A portion of the estates owned by the Port Dickson Company originally belonged to the Linggi Company, which will consequently once again secure possession of an area of land it formerly possessed. The authorised capital of the Port Dickson Company is £200,000, and of this £173,545 has been paid up. The Company owns 4,163 acres of land situated in Negri Sembilan, of which 2,984 acres are planted, and approximately 1,000 acres are being tapped. The amount of further capital required to bring the whole planted area to a producing stage is estimated at £28,257. At the end of 1914 the Linggi Company's planted acreage was 7,391 acres, and instructions have been given to plant up an additional 1,000 acres. The Company has since acquired on satisfactory terms a further property comprising 744 acres, of which 600 acres are planted with rubber. Assuming the present proposals are carried into effect the area of the Linggi Company's properties will be approximately 18,190 acres, of which 11,975 acres are planted, leaving 6,215 acres in reserve. Of the planted area 5,700 acres will come immediately into the productive area.

In order to show what the Linggi Company has done in the past we set out herewith a statement of the price secured, the total profits, and dividends paid since 1906:—

	Rubber—			Coffee, &c.	Total Profit	Dividend on Issued Capital—	
	Lb.	£	Av. Price Realised s. d.	£	£	£	%
1906 ...	17,228	1,[illegible]	—	5,095	[illegible]	2,678	15
1907 ...	110,740	18,379	—	[illegible]	14,536	8,522	20
1908 ...	284,873	60,011	—	1,895	45,811	39,614	60
1909 ...	545,210	167,664	7 1.1	5,325	166,964	148,[illegible]	165
1910 ...	878,754	254,182	5 9.4	3,758	272,706	213,750	237½
1911 ...	1,097,719	242,749	4 9.5	1,656	190,166	185,000	1[illegible]
1912 ...	1,156,344	227,651	4 1.6	3,295	150,548	143,750	143¾
1913 ...	1,281,116	161,213	2 6.2	—	83,747	70,000	70
1914 ...	1,389,290	148,775	2 1.7	—	78,899	75,000	75

We further set out a statement showing the production of the various divisions of the estate, the yield per acre in bearing, and the f.o.b. cost per pound:—

	Output—		Yield per Acre in Bearing		f.o.b. Cost per Lb.—			
	1914	1913	1914	1913	1914		1913	
	Lb.	Lb.	Lb.	Lb.	s.	d.	s.	d.
Seremban ...	316,408	279,666	364	315		8.45	1	0.01
Rantau ...	264,484	241,628	405	376		7.41		9.29
Marjone ...	47,569	28,380	192	192	1	0.87	1	2.25
Ulu Siwah ...	253,991	22[illegible]	445	391		9.96	1	0.97
Siliau	211,916	174,924	416	350		9.63		10.45
Mantin ...	35,451	22,352	252	211	1	3.16	1	4.06
Klang	263,271	310,710	255	305		11.19	1	4.06
	1,389,290	1,281,116	Av. 346	Av. 332	Av.	9.54	Av.1	0.57

The average yield of 346 lb. per acre in bearing compares with an average of 332 lb. in 1913 and 311 lb. in 1912. It is thus evident that the estates are steadily becoming more productive, with the result that costs are reduced.

The following shows the items of which the total costs are made up:—

	1914	1913
	d.	d.
Collecting (including utensils)...	5.24	5.04
Manufacture and forwarding	1.17	1.43
Maintenance of producing area	.99	1.81
Share of general estate expenditure	3.59	3.61
Export duty	.55	.68
	9.54	1s. 0.57

The following are the terms offered to the shareholders of the Port Dickson Company:—

(1) The purchase consideration to be an allotment to the Port Dickson shareholders of one Ordinary share of Linggi Plantations Limited, for every ten shares now held in the Port Dickson Company. (2) The Linggi Company to take over the whole of the liabilities and assets of the Port Dickson Company, including the estates in the East, buildings, equipment, stocks of rubber, cash, &c. (3) The Linggi Company to bear the whole of the expenses of liquidation of the Port Dickson Company. (4) The shares to be issued by the Linggi Company to rank *pari passu* with the other Ordinary shares of that Company in all respects. (5) The Linggi Company will also pay as part of the purchase consideration a sum equal to the amount which would have been received by way of interim dividend on these shares in respect of the year 1915 had they been issued prior to the declaration of the first interim dividend on June 29 last. In order to carry out the scheme it will be necessary to increase the Linggi's issued share capital by approximately £20,000 in Ordinary shares of 2*s.* each. The total issued capital will then stand as follows:—

10,000 7% Preference shares of £1 each,
1,300,000 Ordinary shares of 2*s.* each,

and the capital cost of the planted area will work out at about £11 14*s.* per acre. The following is an estimate of outputs and costs for the years 1916-1920 from the combined properties:—

	Output Lb.	Estimated f.o.b. Cost per Lb.
1916	2,353,000	[illegible]
1917 ...	2,871,000	7·71*d.*
1918	[illegible],415,000	7·23*d.*
1919	3,967,000	6·92*d.*
1920	4,374,000	6·48*d.*

In anticipation of the fusion, Port Dickson shares have gradually risen in price, and it may be added that the shareholders gain the advantage of securing an interest in a dividend-paying concern as against having to wait perhaps for some considerable time before receiving dividends. They will also receive the benefit of securing a wider market for their holdings. Altogether, therefore, there is no doubt that they will be prepared to accept the terms offered by the Linggi Company.

TWO ATTRACTIVE RUBBER SHARES.

BEKOH AND BATANG MALAKA.

The Rubber-share market has for long afforded an attractive field for bargain-hunters with an eye to capital appreciation. The collapse following the boom of 1909-10 eventually brought about a very healthy condition of the commodity market and reduced share values to such an extent as to afford handsome dividend yields on securities of industrial character. With the growth of the motor industry and the huge reduction in the cost of production, there is no longer any doubt that the whole of the plantation output, notwithstanding its steadily increasing quantity, will be readily absorbed. It has come to pass, therefore, that to arrive at the intrinsic value of a rubber share nowadays is practically only an arithmetical calculation, the main factors being the capital, the planted acreage, the progress of output, cost of production, and the price of the commodity. With this state of things it naturally follows that the share quotations of old-established and high dividend-paying companies fluctuate but little, unless with the price of rubber, and, consequently, investors who desire capital appreciation search out the promising young undertakings with planted properties just becoming productive, and therefore offering considerable prospects in the matter of increasing output, reduction of costs, yearly expansion of profits, and larger and larger dividends as the plantations reach the fully-developed stage. We have in mind two companies which may well be placed within this category. These are the Bekoh Rubber Estates and Batang Malaka, both having rubber plantations in the Malay States. The capitalisation in each case is reasonable; the 2*s.* shares have not the disadvantage of a heavy premium, the yearly outputs are rapidly increasing, and with satisfactory reductions reported in costs, dividend prospects in both instances appear good. The merits of the two undertakings are contrasted in the following table:—

	Year	Year	
Issued	£	£	
Market			
Paid	£	£	
Total			
Planted	1,655	1,268	
Market			
Price	£	£	

	1913	1914	1915
Output per planted acre	134 lb. (1914-15)		
Net profit	1,381	£	£
Dividend 1914 1915	7½%	(Probably) Nil	

Current Year's Output.

	Bekoh	Batang Malaka
3 months to Sept.	7,13	

The Bekoh is believed to be on the point of declaring its maiden dividend on account of the year to June 30, 1915, the rate will be 7½. This being the case the market capitalisation per planted acre of only £5⅞ is a decidedly low one for an established rubber company commencing to pay dividends. The output per planted acre last financial year was only 134 lb., whereas 300 lb. is not an unduly high figure for a matured concern. And, moreover, as the output continues to rise with the increasing age of the trees the cost of production should be further reduced. Assuming when in full production in two or three years' time a yield of 300 lb. per planted acre, the total output would be about 500,000 lb. per annum. It would not be unreasonable to expect "all in" costs, now about 1*s.* 3*d.* per pound, to be reduced to 1*s.* per pound, and reckoning on a price of 2*s.* per pound for rubber, a net profit of 1*s.* per pound would give the Company a profit at the rate of £25,000 per annum, equal to more than 25% on the issued capital of £95,000. For the year ended June 30 last the [illegible] profit sufficient to pay more than 7½% on the capital, and the production for the first two months of the current financial year has shown considerable further increase. At par or slightly over, therefore, the 2*s.* shares offer good chance of capital appreciation as the estate progresses towards maturity.

The Batang Malaka is in a slightly different position to the Bekoh, as it has outstanding Debentures of £8,000, which are repayable at the rate of £2,000 per annum, or at 110% on three months' notice But in our calculation of market value per planted acre we have included the £8,000 of Debentures at par and yet the figure works out at only £4 1½. The current year's profit should be in the region of £8,500, which, if there were not the small Debenture debt outstanding, would be equal to 14% dividend on the issued capital of £59,400. As it is £2,000 of the Debentures will certainly be paid off, reducing the amount to £6,000. This would leave about £6,000 profit available, equal to 10% on the capital. It would be much preferable from the shareholders' point of view if the whole of the current year's profits were allocated to Debenture redemption, practically expunging the outstanding indebtedness in this respect. Probably this policy will be adopted. This would set free the profits for dividend purposes and satisfactory dividend distributions would be quickly forthcoming. In any case, however, these shares at 25% discount also appear an attractive rubber speculation.

"The City, July 1914-15," by H. C. Sonne. This little volume contains a brief history of the incidents affecting the Stock Exchange, Money markets, Exchanges, &c., during the period of war to July 1915. It also gives the text of the various proclamations and regulations that have been issued or put into force during the period. London, Effingham Wilson, 5*s.*

WHEAT.

Though this week the Wheat market has been firm, the price of Manitoba wheat having risen 3*s.* to 3*s.* 6*d.* per quarter, the outlook appears to be that quantities to come forward to meet European demands will soon appreciably increase. A feature of the week is the publication of the United States crop estimates, and, according to the *London Grain, Seed and Oil Reporter*, wheat, on the whole, was quite favourable during September for the completion of the American spring wheat harvest, and the Washington Bureau reports estimate the yield as 348 million bushels. A month ago the probable outturn was put at 322 million bushels. The total yield of winter and spring wheat is now estimated by one authority at 887 million bushels, and by the other at 933 million bushels. The official estimate this year is 904 million bushels, while last year's crop was officially estimated at 891 million bushels. Latest cables report a further improvement in the quality and condition of the winter wheat now being delivered.

All reports, both official and private, recently received from Australia continue to advise this year's crop outlook as a most promising one. Rains have fallen at the right time, and, provided favourable weather be experienced at harvest time, the yield is expected to be a record one by several million quarters. In New South Wales the area sown was over 50% larger than last year, whilst in Victoria it was 33% larger, and assuming a moderate increase in the other parts of the Commonwealth the total area this year would work out at about 13,500,000 acres against 10,321,328 acres last year and 9,287,398 acres in 1913. In 1913 the crop, which was a good one, gave a yield of 103,344,132 bushels, or 11.1 bushels per acre. A similar yield per acre this year, allowing for the larger area sown, would give a yield of 150 million bushels, or nearly 19 million quarters, leaving a surplus for export of 12 to 13 million quarters.

Other grain estimates, according to the United States Board of the Bureau of Crop Estimates, include:—

(Millions of Bushels)

	1915	1914 (Final)
Maize	3,026	2,673
Oats	1,517	1,141
Barley	237	195
Rye	44	43

The combined grain crops appear certain to be the largest on record.

TIN.

THE movement of prices in tin has for some time past been the subject of considerable disappointment, even in quarters where a rather conservative attitude is usually adopted regarding the market position and prospects, and at present there is rather a sharp cleavage of opinion as to the probabilities of the near future. On the one hand there are those whose opinion is not lightly to be disregarded, who talk of much lower prices being experienced, while on the other there is a not unimportant section of the trade which inclines to the belief that a substantial recovery is due. As against the market there seem to be certain valid arguments, and these, notwithstanding the fact that present costs of production show a considerable appreciation upon those ruling at the beginning of last year, and that American consumption is exceedingly large. The speculative character of the tin market has always been one of its most attractive features to those who have made it a hobby, but since the war broke out it has almost entirely lost this characteristic, for not only is the Continental market practically a dead letter with the closing of Germany and Austria, but there has been a notable diminution of interest shown by America. The cause of the last named is undoubtedly to be sought in the conditions laid down by the British Government for regulating the supplies of tin of British origin reaching the United States. By these regulations tin can only be shipped to America, when it is consigned to certain British Consuls, and such metal will only be released on signed guarantees that the tin will be used by the recipient for his own industrial purposes, and will not be exported. Furthermore, the effects of the war, and also the regulations just referred to, have tended to prevent importers and others carrying stocks of tin in America.

On the other hand, there are a number of considerations which normally should work for higher prices. It is pointed out that the total supplies of tin from August 1, 1914, to August 31, 1915, compared with the previous 13 months, show a very considerable reduction as indicated in the figures below:—

	1914-15 Tons	1913-14 Tons
Straits	69,254	70,360
Australian	1,681	3,125
Banca	11,523	14,711
Billiton	1,717	2,431
Standard	8,751	11,264
Total	92,926	101,891

It will be seen from these that the monthly average of supplies has fallen from 7,790 tons in 1913-14 to 7,130 tons in the following period, and that the reduction applies to all sources of supply. It is probable that the serious fall in the price sustained during the first part of last year has affected the output of the higher cost properties, while financial disturbances arising from causes connected with the war have also played a part. Production under existing circumstances can hardly be expected to increase, although a substantial and sustained recovery in prices would no doubt induce the development of mining propositions which have been rendered idle through the war. As against this falling off in supplies, deliveries during the same period of 13 months have also fallen off, this being especially the case in Holland; while, on the other hand, the apparent consumption in the United Kingdom has been largely increased. America is now taking tin at an enormous rate, the absence of stocks in the hands of dealers in the chief distributing centres necessitating the holding of small stocks in all directions by consumers. The apparent consumption from August 1, 1914, to August 31, 1915, compared with the previous 13 months, is shown in the following figures:—

	1914-15	1913-14
United Kingdom	28,631	19,902
Holland	6,199	17,755
Continent	9,036	11,872
Total	43,866	49,529
America	[illegible]	48,574
Total	[illegible]	[illegible]

From the above it will be seen that the monthly average fell from 7,460 tons in 1913-14 to 6,970 tons in 1914-15. As bearing upon the market situation, it may be remarked that the United States May to August deliveries last year were 14,250 tons, and in the same period of 1915, 19,300 tons, an excess in four months of over 5,000 tons. America is now making preparations to supply a portion of her own requirements by smelting Bolivian ores, but developments in this direction are bound to move slowly, and for the reason that the United States tin-smelting industry is hardly likely to assume much importance for some time to come, although the tendency in this connection deserves to be watched.

There has been a fresh upward flurry in prices within the last day or two, which had its origin in reports circulated by an important New York tin-dealing firm, that it was intended to place an export duty of 10% on all tin shipped from the Federated Malay States. It was felt to be quite in accordance with the topsy-turvy conditions prevailing in most sections of the metal trade that such information should have come from New York, but the most diligent inquiries, here and in the East, have failed to reveal any basis for the rumour. At the same time, in view of the action taken by the Government of Ceylon in placing an export duty upon various staple commodities of that island

These facts present the prospect of unparalleled advantages to members of the "Pool."

for the purpose of raising revenue, there seems no reason why the Federated Malay States should not pursue a similar course of action. The riots in Singapore must have involved the colony in a considerable additional expense, while above and beyond this the need for raising revenue may impel fresh taxation, and this might easily take the form of an export duty on tin. An article of so highly speculative character as tin has proved itself to be in the past, and in which an annual fluctuation of from £50 to £70 a ton has been quite common, could easily bear a charge of this kind, while the metal itself is one of the very few articles in which an increase in price has never yet proved seriously to have affected its consumption.

It will be of interest to have a record of market movements in price of standard tin per ton over the last three years. This is roughly indicated below:—

	Highest	Lowest
	£	£
1913	252 January	166½ December
1914	184½ February	120 October

Approximate prices in 1915 will show the sharpness of market changes:—

1915	£	1915	£
January 4	151	August 20	148
March 12	190	September 3	154½
April 1	168	October 7	150
July 9	171		

LANCASHIRE COTTON INDUSTRY.

THE range of prices is higher than for a very long time back and the upward movement in raw cotton rates continues. Compared with a fortnight ago American cotton is about three farthings a pound dearer, and Egyptian cotton is a penny a pound up during the same period. It may be said that on September 22 middling American on the spot in Liverpool was at 6.55*d.*, whilst on Wednesday last the quotation was 7.24*d.*, and during the same period fully good fair brown Egyptian cotton advanced from 9.10*d.* to 10.05*d.* Spinners of yarn and manufacturers of cloth have advanced their quotations, but buyers have been slow to follow, and where attempts have been made at business it has been most difficult to bridge differences. Raw cotton has been advancing in price during the last couple of months, and many traders have not believed in the rise and have anticipated a reaction. On Monday last two official reports were issued by the United States Government relating to the growing crop. In the first instance it was stated that the amount of cotton ginned so far this season amounted to 2,900,000 bales, as compared with 3,394,000 bales last year and 3,247,000 bales same time in 1913. It was also stated that the condition of the crop was 60.8%, against 73.5% same time last year. This last statement was rather worse than expected, and prices in New York and Liverpool immediately advanced. It is understood that these statistics indicate a yield of less than 11,000,000 bales, and with a possible consumption of 15,000,000 bales it looks as though stocks at the end of this season will be very low. Some Manchester traders are now more disposed to believe that the higher prices have come to stay for the present, but our customers abroad are not inclined to purchase freely at current rates.

Our shipments in cotton piece-goods are falling off rather rapidly, and some leading merchants in Manchester are fast working off contracts and cannot find sufficient work for their hands. One big warehouse is being closed for the whole of next week, and other important establishments are working short time. These cases refer more particularly to India houses. This is a time of the year when a substantial business is generally done for Calcutta, Bombay, and Madras, as the result of the monsoon rains is pretty well known. At the beginning of this week freer buying took place in light fabrics, such as dhooties for Calcutta, but the prices taken were very poor, and in some instances the business was due to manufacturers forcing sales. Makers of grey shirtings are in a very poor way and fresh orders are scarce. Isolated transactions occur for China, but in spite of low stocks in Shanghai buyers operate very cautiously. Developments in connection with political matters in the Near East seem likely to have an adverse effect upon our trade in that part of the world, and exporters are looking on pending further news. Some producers of fancy cloths, such as brocades, have recently extended their engagements and a fairly profitable business has been done. On the other hand, many makers of staple goods for our Eastern outlets are stopping looms and losing a lot of money.

It is hard work for spinners of American yarns to maintain their position in face of dearer raw material, as at such times there is generally a tendency for the margin of profit to be narrowed as a result of the difficulty in obtaining adequate advances. Producers, however, are not hampered by heavy stocks and a firm front is being presented to buyers. Some improvement has recently shown itself in medium numbers. The strong position of producers of two-fold yarns is well maintained, and early delivery in the lower counts cannot be secured. In Bolton spinnings prices have now got on to a decidedly high basis, and although in some quarters users who have been short have covered on the best terms possible, there is no disposition to purchase freely at the prices now ruling. The appreciation in values, however, is resulting in delivery instructions coming in on a freer scale against old contracts. There has been business about in bundle yarns for India and in cops for the Continent, but buyers have not readily paid more money and a good deal of the demand has been unworkable.

On Tuesday in last week a further joint meeting was held in Manchester between representatives of the cotton weaving employers and the Operative Weavers' Amalgamation to consider the application of the workpeople for a 5% bonus on wages during the period of the War. After a short discussion it was decided by the masters to refer the question to the local associations for consideration. Special meetings in the various districts have been held this week, and it was arranged that another joint meeting between the masters and the trade union officials should be held yesterday (Friday), when a reply to the application would be given.

THE TINPLATE TRADE.

THE Welsh tinplate makers have ever since the War been struggling against adverse conditions, and their plight has in a good many cases become serious owing to the shutting off of so many of their principal markets, as will be seen from the following table:—

To	1915* Tons	1914 Tons	1913 Tons	1912 Tons
Russia	580	8,956	9,921	9,675
Sweden	—†	5,613	7,660	7,264
Norway	29,311	28,900	25,166	31,503
Germany	—	17,910	34,379	41,379
Netherlands	18,287	30,765	43,009	44,156
Belgium	—	8,744	13,363	18,875
France	39,089	27,739	21,332	31,930
Portugal	9,304	10,983	14,873	15,797
Italy	12,699	16,250	20,418	21,478
Roumania	581	17,512	10,927	35,920
China	7,933	16,203	15,569	9,152
Hong Kong		5,644	6,122	6,254
Japan	15,945	26,166	28,222	23,236
U.S.A.	839	17,468	21,516	2,135
Argentine Republic	8,938	7,789	19,323	10,283
B.E. India	35,211	55,904	51,571	39,952
Straits Settlements		13,640	16,705	13,660
Australia	27,642	31,354	28,961	29,201
New Zealand	—†	4,450	4,241	4,107
Canada	—†	8,246	9,889	7,297
Total export	260,485	435,592	494,497	481,123

* January August. † Not separately specified.

On the basis of 260,000 tons [illegible] Wales should export about 390,000 tons for the complete year, [illegible] with 1913, the last complete year of peace. The absolute closing of Germany and Belgium account for

about 40,000 tons of the deficit, while there is a drop of 10,000 tons in the shipments to Roumania.

The unfortunate situation in which the Welsh makers have found themselves has been added to by the difficulty of and delay in securing permits even for certain of our Allies, while to such countries as Holland, Denmark, Norway and Sweden, and Greece, it has for some time past been practically impossible to obtain permits. Consumers of tinplates in these countries, in common with all others whose operations have been brought to a standstill by the action of the Government in respect of Welsh tinplates, turned their attention, therefore, with increasing force to America, with the result that large quantities of American tinplates have been sold for shipment to Scandinavia and other neutral European markets, while some plates were actually sold to United Kingdom consumers. The representations made by the Welsh manufacturers as to the serious nature of the inroads thus being made upon their trade, and of the manifest injustice of a policy which, while permitting America to annex without let or hindrance the trade which Wales had built up as a result of years of experience and the expenditure of enormous effort, prevented Welsh works continuing business, have had one very satisfactory result. The authorities, who had already taken under their ægis the entire tin trade of the United States in so far as it affected tin of British origin, have now made it a condition of the terms on which America can obtain such tin that its exportation from America to neutral Europe in any form whatsoever shall be subject to British permits, exactly in the same way as if the finished material itself were of British origin. This has been brought about by a very clever stroke. Before the tin entering the United States is released by the British Consul, to whom it must be consigned, various forms of guarantee have to be given by United States consumers, and at the close of last month amended clauses came into operation.

Moreover, it has been arranged that the British authorities shall be duly notified of United States exports of any manufactured goods containing tin, even when they are being shipped to a destination outside of Europe, which is not in British possession. In this way it will be seen that the British Government are in virtual control of the United States export business in all goods which consist wholly or partly of tin. The supervision of our authorities thus extends even to tinplates shipped from America to Hong Kong or the Argentine. The absolute control of the seas by the British Fleet has never been more clearly shown than in this demonstration of the ability of the British Government to regulate the overseas trade of neutral countries, and the illustration given may well serve as an object-lesson of the silent pressure which our Fleet exercises.

Correspondence.

THRIFT.

To the Editor of THE STATIST.

SIR,—I ask the hospitality of your columns to put before the public another way than that advocated by you of enabling the country to cover all the expenses of the War. We have at present a Coalition Cabinet in office, a portion of whom are Tariff Reformers. And others who are not Tariff Reformers are members of a party the majority of which is Tariff Reform. Yet, even at a time like the present, the whole Cabinet shrinks from enforcing thrift by heavy taxation. For the present, at all events, we have proof, then, that enforced thrift is out of the question. There remains voluntary thrift. But he must be a wonderfully sanguine man who seriously believes that he can persuade any considerable number of the British people to give up their luxuries, comforts, enjoyments, and so on not because they must, but because it is their duty. For nearly two thousand years the Christian Church has been urging all sorts of self-sacrifice upon its members, with the result that the Christian Church is split up into innumerable sects, and that all the sects together have practically lost all hold upon their members. Can any man honestly believe, in the face of such experience, that newspaper advocacy can achieve what a great Church has utterly failed to do? I accept completely and fully the statement that we ought to take practical and fairly effectual measures to meet the cost of this exceedingly costly War. But I submit that the most efficacious way of doing that is to increase the incomes of the people, not to diminish their spending power. It is of the very utmost importance that we should increase our exports. The imports, whatever we do, will be immense as long, at all events, as the War lasts. But our exports have shrunk, and, I fear, may shrink further. The real duty of the statesman at present is to expand our exports in every possible way. It is his duty, firstly, because it will enable the British public better to stand the strain the War has put upon it. It is his duty, secondly, because by expanding our productive power and selling largely to the rest of the world we shall gain new markets and make a step forward in increasing the national wealth. It is his duty, lastly, because the whole British Empire has rallied with splendid loyalty to the help of the United Kingdom, and, therefore, ought to be rewarded to the very utmost of our ability. It may be objected that we are spending so much on the War that we have neither the labour nor the capital to increase our exports. I demur absolutely to such a statement. Labour is scarce at present and capital is timid, not because there is not a sufficiency of both, but because the Government has not sense enough to see what it ought to do. It makes no difficulty whatsoever about taking into its own control the railways, a great part of the shipping, the munitions factories, and so on. It has bought up the wheat of India and imported it. It has bought immense quantities of sugar and imported it. And yet it asks us to believe that while it can do all that it can neither prevent importers from exacting exorbitant prices, nor can it find the capital for putting an end to the timidity of the banks and the exporting merchants. Let it extend its own control over the banks, and, if necessary, over the manufacturers, and it will find, just as it has found in the cases already referred to, that there is no serious difficulty. It is only timidity and fear of the rich that are standing in the way.—Yours, &c.,

A WAR ECONOMIST.

[We are at one with our correspondent as to the desirability of increasing our exports. Where we differ from him is in the means to be adopted. Our manufacturing industries are now, with one notable exception, fully engaged in producing (1) for war, (2) for the great and unprecedented home trade, (3) for export. The greatness of the home trade is due not only to the War expenditures, but to the fact that the real wages of families—the volume of employment, coupled with the rate of wage, less the higher prices of commodities—are unusually high and that the expenditures of the working classes are unprecedented. Much economy is being practised by the wealthy and by the professional classes, though doubtless still more would be possible, but the great bulk of the nation is spending more freely than ever. If the great working classes could be induced to save their extra wages against the depression in trade which must come sooner or later after the War is over, they would not only assist their country to meet its enormous War expenditures, but would also diminish the period of subsequent trade depression. Moreover, by reducing their consumption they would set labour free for the export trade, and the adverse trade balance would in some measure be rectified by increased exports.—ED. "THE STATIST."]

INCOME TAX ON FOREIGN BALANCES.

To the Editor of THE STATIST.

SIR,—May I be allowed to call attention to a matter of some importance in connection with the incidence of income tax? It is known that large sums of money belonging to foreigners resident abroad are held on deposit by London bankers and merchants, on the interest of which income tax has now to be paid under the provisions of the recent Budget.

This is undesirable, both because the money is in profitable use here and because, if the foreigner elected to withdraw his money at the present time, our nation's gold reserve would suffer.

I would therefore suggest for the consideration of the Government that, in order to prevent withdrawals of foreign balances, which are every day becoming larger, the increased income tax should not be levied upon interest payable to foreign and colonial depositors.

I venture to think that this is a matter deserving of careful consideration.—Yours truly,

BANKER.

London, October 6, 1915.

WAR PROFITS TAX.

To the Editor of THE STATIST.

SIR,—The Chancellor of the Exchequer in his Budget speech has clearly shown that the present position of our national finances is very serious and disquieting, and every true patriot will be ready and willing to bear his full share of the national burden. At the same time all will admit that no class of the community should be unfairly or excessively taxed. From this point of view will you permit me to call attention through your columns to the special hardship inflicted by the excess profit clauses in the Budget upon merchants trading with South America? They mostly do their business by shipping goods from London, Manchester, and other ports upon orders received from South American importers. This trade is, as a rule, safe and profitable for a certain number of successive years; but these are generally followed by somewhat prolonged periods of depression, when large losses are made, by diminished trade, and by bad debts, often for large amounts, which sweep away much of the profit of previous prosperous years.

During the past three or four years South America has passed through a most severe financial and commercial crisis, and export business to that continent has shrunk to the smallest possible dimensions, whilst many bad debts have been incurred. Thus the assessment for income tax in 1914-15 was with many export firms probably the lowest on record for many years. Therefore, the excess profit clauses in the Budget, if they become law as they now stand, will press very hardly and unfairly upon those firms, seeing that the 1914-15 assessment is to be the datum for calculating excess profits. For if a recovery—perhaps only slight and partial—in trade occurs, the increase in profits, however small, will be subject to the 50% tax, even though the year's profit may be far below the normal amount.

It is true that on appeal 6% on the capital employed may be taken as the datum line, but 6% is obviously an insufficient margin in foreign, and especially South American, business, as the merchant must set aside an adequate reserve annually in prosperous times to meet inevitable losses in bad years.

If, therefore, the excess profit tax is levied upon all merchants alike, without taking into account the special conditions under which their trade is carried on, and the fact that some trades are more risky than others, it is to be feared that many exporters will have to close their business, because it could no longer be carried on profitably. This would mean that our great export trade, which Government speakers tell us must be maintained and increased if we are to pay for imports, will be considerably crippled and diminished.

I am sure the Government do not desire to deal hardly or unfairly with any class of the community or to lessen the volume of our export trade. It is to be hoped, therefore, that the tribunal which they intend to set up will not be fettered by hard and fast rules, but will have discretionary powers, so that relief may be given in cases of special hardship, and that account may be taken of the special conditions and risks of each particular trade. Surely it would not be wise to impoverish and cripple the trader whose business benefits the whole community, but the just and statesmanlike way is to fit the burden to the back that has to bear it.—Yours faithfully,

EXPORT MERCHANT.

London, October 7, 1915.

New Issues.

PULLMAN CAR COMPANY, LIMITED.

Messrs. Higginson and Company are offering for sale £150,000 6% First Mortgage Sinking Fund Equipment Debentures of the Pullman Car Company, Limited, at the price of 98%. On or before October 1, 1916, and annually up to October 1920, a sum of £6,300, and on October 1, 1921, and annually until maturity on October 1, 1930, £12,600 will be applied as a sinking fund for the redemption of the present issue, either by drawings at 105 or by purchase at or below 105. The Company's business is to provide and operate Pullman cars on railways in Great Britain, contracts having been entered into with three companies. The average annual earnings for the past three years work out at £19,306, and it is expected that for the current year they should exceed £25,000. Interest charges upon the present issue call for £9,000, leaving a surplus of £10,306 on the three years' average available for sinking fund, depreciation, &c. The Debentures may be regarded as a fair venture at the price at which they are offered.

ALUMINIUM CORPORATION, LIMITED.

This Company is offering to its Preference and Ordinary stockholders an issue of £64,900 6% Mortgage Debenture stock at par in order to raise the necessary funds to increase its water power. The manufacture of aluminium has been conducted by the Company for four years past, and the profits for the past two years on its small output have been about £12,600 per annum, which is more than sufficient to pay the interest on the whole amount of the Debenture stock. It is pointed out that aluminium is an essential munition of war, the importance of which cannot be overestimated, and the Government have not only pressed the Company to increase its output, but have provisionally arranged to take the whole of the metal produced by it up to the end of the year 1916. The Company's works are now a controlled establishment under the Munitions of War Act, 1915, and have been exempted from recruiting by the Ministry of Munitions. The money subscribed in respect of this year will be employed in carrying out the additional works necessary to enable the Company to increase its water power by bringing into use its water-rights in the Dulyn Valley, in discharging liabilities already incurred in connection with such works and other extensions and improvements, and for the general purposes of the Company. The direct result of the increase of water power will be the ability of the Company to increase substantially its output of aluminium. The stockholders of the Company will [illegible] the money asked for, knowing that the proceeds will be put to good use in the interests of the country as a whole.

[illegible] Bank [illegible] dividend [illegible] per share, [illegible] a total distribution for the year of 8%, £9,500 added to the staff pension and guarantee fund, £75,000 [illegible] investments, and £[illegible] carried forward.

CHICAGO & NORTH WESTERN RY. CO.

FIFTY-SIXTH ANNUAL REPORT—FOR THE FISCAL YEAR TO JUNE 30, 1915.

To the Stockholders of the Chicago and North Western Railway Company:

The Board of Directors submit herewith their report of the operations and affairs of the Chicago and North Western Railway Company for the fiscal year ending June 30, 1915.

The Inter-State Commerce Commission having prescribed new classifications of accounts, effective July 1, 1914, the results for the preceding year shown in this report have been partially revised for the purpose of comparison.

Average number of miles operated		8,107.82
Operating Revenues—		
Freight	$51,925,360 54	
Passenger	20,528,443 46	
Other transportation	6,694,249 64	
Incidental	1,633,121 46	
Total Operating Revenues		$80,779,675 30
Operating Expenses (69.78% of Operating Revenues)		56,371,573 04
Net Revenue from Railway Operations		$24,408,102 26
Railway Tax Accruals (5.59% of Operating Revenues)	$4,516,943 10	
Uncollectable Railway Revenues	7,254 64	
		4,524,197 74
Railway Operating Income		$19,883,904 52
Non-operating Income—		
Rental Income	$484,441 71	
Dividend Income	1,810,227 00	
Income from Funded Securities	5,265 85	
Income from Unfunded Securities and Accounts, and Other Items	709,825 41	
Total Non-operating Income		2,799,999 97
Gross Income		$22,683,904 47
Deductions from Gross Income—		
Rental Payments	$1,066,045 10	
Interest on Funded Debt	9,565,015 81	
Other Deductions	108,136 57	
Total Deductions from Gross Income		10,739,825 48
Net Income		$11,914,049 09
Disposition of Net Income—		
Sinking Funds	$204,053 75	
Dividends—		
8% on Preferred Stock	1,791,600 00	
7% on Common Stock	9,108,015 00	
Total Appropriations		11,103,668 75
Balance Income for the year		$810,380 34

The results as compared with the preceding fiscal year were as follows:—

Freight Revenue decreased	$2,065,614 69
Passenger Revenue decreased	1,012,099 33
Other Transportation Revenue decreased	700,462 04
Incidental Revenue increased	138,542 73
Total Operating Revenues decreased	$3,779,659 41
Operating Expenses increased	3,930,002 26
Net Revenue from Railway Operations decreased	$150,342 85
Railway Tax Accruals increased	$271,152 81
Uncollectable Railway Revenues increased	7,254 64
	271,407 45
Railway Operating Income decreased	$121,064 60

Of the Operating Expenses for the current fiscal year $32,920,365.11, or 58.40%, was paid employees for labour, as compared with $34,098,916.25, or 56.55%, paid during the preceding fiscal year. The decrease of $1,178,551.14 in the amount paid is accounted for as follows:—

Decrease account less time worked	$1,226,711 22
Increase account higher rates of compensation	48,160 08
	$1,178,551 14

MILES OF RAILROAD.

The total number of miles of railroad owned June 30, 1915, was ... 7,946.13 miles

In addition to which the Company operated:—

Through Ownership of Entire Capital Stock—		
Wolf River Valley Railway (Antigo to Van Ostrand, Wis.)	1.98	,,
Under Lease—		
De Pue, Ladd & Eastern Railroad (Ladd to Seatonville, Ill.)	3.25	miles
Belle Fourche Valley Railway (Belle Fourche to Newell, S. D.)	23.52	,,
James River Valley & North Western Railway (Blunt to Gettysburg, S. D.)	39.55	,,
Macoupin County Extension Railway (Benld to Staunton, Ill.)	4.36	,,
Iowa Southern Railway (Miami to Consol, Iowa)	12.25	,,
	82.93	,,
Under Trackage Rights—		
Peoria & Pekin Union Railway (in the City of Peoria, Ill.)	2.02	,,
Chicago, Indiana & Southern Railroad (Churchill to Ladd, Ill.)	2.80	,,
Union Pacific Railroad (Omaha Transfer Station, Council Bluffs, Iowa, to South Omaha, Neb.)	8.73	,,
Missouri Valley & Blair Railway and Bridge Company's track	3.36	,,
Chicago, St. Paul, Minneapolis & Omaha Railway—		
Elm to Omaha, Neb.	24.70	,,
Phoenix to Wayzata, Minn.	22.79	,,
In Sioux City, Iowa	2.28	,,
Illinois Central Railroad (Sioux City to Wren, Iowa)	10.10	,,
	76.78	,,
Total miles of railroad operated June 30, 1915	8,107.82	,,

The above mileage is located as follows:—

In Illinois	824.53 miles
In Wisconsin	2,170.03 ,,
In Michigan	4.88 ,,
In Minnesota	650.30 ,,
In Iowa	1,633.14 ,,
In North Dakota	14.28 ,,
In South Dakota	1,065.15 ,,
In Nebraska	1,102.05 ,,
In Wyoming	150.46 ,,
Total	8,107.82 ,,

FREIGHT TRAFFIC.

The details of Freight Traffic for the year ending June 30, 1915, compared with the preceding year, were as follows:—

	1914	1915	Decrease Amount	Decrease %
Freight Revenue	$53,990,975 13	$51,925,360 44	$2,065,614 69	3.83
			1914	1915 Percentage of Inc. or Dec.
Tons of Revenue Freight Carried			43,309,643	40,399,215 −6.72
Tons of Revenue Freight Carried One Mile			6,229,944,171	6,216,280,599 −.22
Average Revenue Received per Ton			$1 25	$1 29 +3.20
Average Revenue Received per Ton per Mile			.87 of a cent	.84 of a cent −3.45
Average Distance each Revenue Ton was Hauled			143.85 miles	153.87 miles +6.97
Miles of Loaded Freight Train			18,314,329	17,250,525 −5.81
Average Number of Tons of All Freight Carried per Train Mile—				
East of Missouri River			442.36	479.68 +8.44
West of Missouri River			293.95	293.49 −1.19
Whole Road			411.48	441.40 +7.68
Average Number of Tons of All Freight Carried per Loaded Car Mile			20.81	21.11 +3.94
Average Earnings per Freight Train Mile			$2 95	$3 01 +2.03

PASSENGER TRAFFIC.

The details of Passenger Traffic for the year ending June 30, 1915, compared with the preceding year, were as follows:—

	1914	1915	Decrease Amount	Decrease %
Passenger Revenue	$21,540,542 79	$20,528,443 46	$1,012,099 33	4.70
		1914	1915	Percentage of Dec. (−)
Revenue Passengers carried		53,389,428	53,054,570	−.63
Revenue Passengers Carried One Mile		1,173,435,140	1,130,297,641	−3.68
Average Fare Paid per Passenger		63 cents	62 cents	−1.62
Average Rate Paid per Pass. per Mile		1.84 cents	1.82 cents	−1.09
Average Distance Travelled per Revenue Passenger		35.14 miles	34.17 miles	−2.76
Mileage of Passenger and Mixed Trains		21,537,781	21,372,414	−.77
Average Passenger-train Revenue per Train Mile		$1 27	$1 22	−3.94

MAINTENANCE OF WAY AND STRUCTURES.

The total Operating Expenses of the Company for the year ending June 30, 1915, were $56,371,573.04; of this amount $10,450,739.45 was for charges pertaining to the Maintenance of Way and Structures. Included in these charges is a large part of the cost of 59,969 tons of steel rails, the greater portion of which was laid in replacement of rails of lighter weight in 441.23 miles of track; also the cost of 2,583,111 new ties.

The charges for Maintenance of Way and Structures also include a portion of the cost of ballasting 49.08 miles of track with crushed stone, 146.34 miles with gravel, and 21.44 miles with cinders; the erection, in place of wooden structures, of 55 new steel bridges on masonry, aggregating 3,550 feet in length and containing 3,885 tons of bridge metal; and the replacement of other wooden structures with masonry arch and box culverts and cast-iron pipes, the openings being filled with earth. The wooden structures replaced by permanent work aggregate 8,929 feet in length.

The charges on account of Maintenance of Way and Structures for the year ending June 30, 1915, compared with the preceding year, were as follows:—

Cost of Rails—	1914	1915	Increase (+) or Decrease (−)
New Steel Rails	$1,212,258 90	$696,965 82	−$515,293 08
Usable and re-rolled Rails	996,460 61	842,610 97	−153,849 64
	$2,208,719 51	$1,541,576 79	−$667,142 72
Less value of old Rails and other items	1,484,363 53	1,191,307 88	−293,055 65
Net charge for Rails	$724,355 98	$350,268 91	−$374,087 07
Cost of Ties	1,762,313 18	1,547,651 05	−214,662 13
Cost of Ballast	227,056 25	117,254 77	−109,801 48
Cost of Other Track Material	539,118 33	375,613 88	−163,504 45
Roadway and Track Labour and Other Expenses	5,073,539 12	4,486,656 40	−586,882 72
Total Charges for Roadway and Track	$8,326,382 86	$6,877,445 01	−$1,448,937 85
Other Charges Account Maintenance of Way and Structures were as follows:			
Bridges, Trestles and Culverts	937,863 85	833,823 69	−104,040 16
Road Crossings, Fences, &c.	331,200 62	296,673 21	−34,527 41
Signals and Interlockers	434,770 48	419,141 63	−15,628 85
Buildings, Fixtures and Grounds	1,229,186 84	995,745 21	−233,441 60
Docks and Wharves	53,975 41	88,452 05	+34,476 64
Superintendence	522,712 02	515,022 78	−7,689 24
Roadway Tools and Supplies	150,540 57	130,502 96	−20,037 61
Sundry Misc. Charges	226,462 07	293,922 88	+67,460 81
Total Charges Acct. Maint. of Way and Structures	$12,213,094 72	$10,450,739 45	−$1,762,355 27

The above charges for Maintenance of Way and Structures for the current year amount to 18.54 of the total Operating Expenses, as compared with 20.25% for the preceding fiscal year.

MAINTENANCE OF EQUIPMENT.

The charges on account of Maintenance of Equipment for the year ending June 30, 1915, compared with the preceding year, were as follows :—

	1914. $	1915. $	Inc. or Dec $
Locomotives	4,831,[illegible] 56	4,740,217 79	— 91,218 57
Passenger-train cars	1,[illegible] 05	1,288,877 15	+ 16,583 52
Freight-train cars	5,445,[illegible] 09	5,873,407 23	+427,918 14
Work equipment	145,[illegible] 97	156,987 57	+ 11,104 60
Shop machinery and tools ...	229,[illegible] 15	170,396 43	— 59,024 72
Superintendence	359,[illegible] 39	354,854 54	— 4,672 85
Sundry miscellaneous charges...	94,187 14	84,194 47	— 9,992 67
Total charges account maintenance of equipment ...	12,358,487 73	12,648,935 18	+290,447 45

The above charges for Maintenance of Equipment for the current year amount to 22.44% of the total Operating Expenses, as compared with 20.49% for the preceding fiscal year.

RESERVE FOR ACCRUED DEPRECIATION ON EQUIPMENT.

At the close of the preceding fiscal year there was a balance to the credit of the Equipment Reserve Accounts of		$5,089,239 37
During the year ending June 30, 1915, there was credited to the Equipment Reserve Accounts on account of charges to Operating Expenses for Accrued Depreciation		2,323,461 58
		$8,112,700 95
And there was charged during the year against the above amount the Accrued Depreciation previously credited this account on Equipment retired or transferred from one class of service to another		263,281 48
Leaving a balance to the credit of the Equipment Reserve Accounts on June 30, 1915, of		$8,149,419 47

TRANSPORTATION EXPENSES.

The Transportation Expenses of the Company for the year ending June 30, 1915, were $29,753,444.06, or 52.78% of the total Operating Expenses. Of this amount $19,268,640.36, or 64.76%, was charged for labour; $5,842,571.64, or 19.64%, was charged for fuel for locomotives; and $4,642,232.06, or 15.60%, was charged for supplies and miscellaneous items. The decrease in the Transportation Expenses for the year ending June 30, 1915, as compared with the preceding fiscal year, was $2,195,793.88, or 6.87%, distributed as follows :—

Decrease in amount charged for labour	$547,529 01
Decrease in amount charged for fuel for locomotives	1,063,155 48
Decrease in amount charged for supplies and miscellaneous items	585,109 39
	$2,195,793 88

CAPITAL STOCK.

There was no change during the year in the Capital Stock and Scrip of the Company.

The Company's authorised Capital Stock is Two Hundred Million Dollars ($200,000,000.00), of which the following has been issued to June 30, 1915 :—

Common Stock and Scrip held by the Public	$130,117,028 82
Common Stock and Scrip owned by the Company ...	2,338,502 15
Total Common Stock and Scrip	$132,455,530 97
Preferred Stock and Scrip held by the Public	$22,395,120 00
Preferred Stock and Scrip owned by the Company ...	3,834 56
Total Preferred Stock and Scrip	$22,398,954 56
Total Capital Stock and Scrip, June 30, 1915 ...	$154,854,485 53

FUNDED DEBT.

At the close of the preceding fiscal year the amount of Funded Debt, exclusive of Bonds in the Treasury and due from Trustee, was $214,879,000 00

The above amount has been decreased during the year ending June 30, 1915, by Bonds and Equipment Trust Certificates redeemed or transferred as follows :—

C. & N. W. Ry. Consolidated Sinking Fund Currency of 1915, 7%, matured Feb. 1, 1915, viz.		
Redeemed ...	$12,669,000 00	
Unrepresented and transferred to Current Liabilities	163,000 00	
		$12,832,000 00
C. & N. W. Ry. Equipment Trust Certificates of 1912, 4½%, redeemed, viz.:—		
Series A	$300,000 00	
Series B	300,000 00	
Series C	400,000 00	
		$1,000,000 00
C. & N. W. Ry. Sinking Fund of 1879, 6%, redeemed		6,000 00
C. & N. W. Ry. Sinking Fund of 1879, 5%, redeemed		183,000 00
M. L. S. & W. Ry. Extension and Improvement Sinking Fund Mortgage, 5%, redeemed		26,000 00
C. & N. W. Ry. Sinking Fund Debentures of 1933, 5%, redeemed		251,000 00
Total Funded Debt Redeemed or Transferred		$14,298,000 00
		$200,581,000 00

And the above amount has been increased by Bonds sold during the year, as follows :—

C. & N. W. Ry. General Mortgage Gold Bonds of 1987, 5%, sold to reimburse the Company for past expenditures made for construction and in redeeming matured Bonds	$[illegible] 00
Total, June 30, 1915	$210,581,000 00
Net Decrease during the year	$4,298,000 00

BONDS IN THE TREASURY AND DUE FROM TRUSTEE.

At the close of the preceding fiscal year the amount of the Company's Bonds in the Treasury and due from Trustee was $4,173,000 00

The above amount has been increased during the year ending June 30, 1915, as follows :

C. & N. W. Ry. 5% Sinking Fund Bonds of 1879, Redeemed	$59,000 00	
M. L. S. & W. Ry. 5% Extension and Improvement Sinking Fund Mortgage Bonds, Redeemed ...	17,000 00	
C. & N. W. Ry. 5% Sinking Fund Debentures of 1933, Redeemed	[illegible] 00	
C. & N. W. Ry. General Mortgage Gold Bonds of 1987 Due from Trustee in Exchange for Bonds Retired, viz.—		
C. & N. W. Ry. Consolidated Sinking Fund Currency 7%, [illegible] 00		
C. & N. W. Ry. Sinking Fund Bonds of 1879, 6% ... 6,000 00		
C. & N. W. Ry. Sinking Fund Bonds of 1879, 5%... ... 124,000 00		
M. L. S. & W. Ry. Extension and Improvement Sinking Fund Mortgage, 5% ... 38,000 00		
C. & N. W. Ry. Sinking Fund Debentures of 1933, 5% ... 124,000 00		
	12,961,000 00	
C. & N. W. Ry. General Mortgage Gold Bonds of 1987, Due from Trustee on Account of Construction Expenditures made during the year	1,000,000 00	
		14,168,000 00
		$18,341,000 00

The Bonds on hand and due from Trustee have been decreased during the year as follows :—

C. & N. W. Ry. General Mortgage Gold Bonds of 1987, 5%, Sold to Reimburse the Company for past Expenditures made for Construction and in Redeeming Matured Bonds	$10,000,000 00	
M. L. S. & W. Ry. Extension and Improvement Sinking Fund Mortgage, 5% Bonds, Retired	29,000 00	
C. & N. W. Ry. 5% Sinking Fund Debentures of 1933, Retired	4,000 00	
C. & N. W. Ry. 4½% Equipment Trust Certificates of 1913, Retired	[illegible] 00	
		10,[illegible] 00
Total, June 30, 1915		$7,908,000 00
Net Increase during the year ...		$3,735,000 00

CONSTRUCTION.

The construction charges for the year ending June 30, 1915, were as follows :—

On Account of Elevating Tracks, viz.—			
In River Forest, Illinois ...		$142,738 84	
Greenfield Avenue, north, Milwaukee, Wis. ...		285,188 73	
			$427,927 57
On Account of Extensions, viz.—	Miles.		
Kingston Extension, Wisconsin ...	15.60	$94,515 11	
Kooperick Extension, Wisconsin ...	7.19	36,956 29	
			131,471 40
Sundry Construction—			
Land for Transportation Purposes		$97,224 99	
Buildings and Fixtures		459,039 15	
Bridges, Trestles and Culverts		402,157 00	
New Sidings, Yard Tracks and Spurs to Industries		227,3[illegible] 74	
Crossings and Signs		61,530 87	
Strands and Interlockers		25,562 99	
Reduction of Grade between Nelson and Peoria, Illinois		289,482 40	
Betterment of Roadway and Track		694,869 53	
Shop Machinery		30,430 41	
Miscellaneous Construction, including Fences, Wharves and Docks, and other items ...		94,291 65	
			2,[illegible] 37
Equipment			
40 Steam Locomotives, 5,000 Freight Train Cars, 70 Passenger-Train Cars, and 260 Work Equipment Cars ...		$4,[illegible] 95	
Improvement of Equipment		1[illegible] 03	
		$6,[illegible] 98	
Less Original Cost of Equipment Retired, as follows			
50 Locomotives ...	$2[illegible] 0		
2,639 Freight-Train Cars ...	1,120,108 78		
20 Passenger-Train Cars ...	130,795 47		
285 Work Equipment Cars ...	17,754 16		
Other Items	2[illegible] 29		
	1,[illegible] 0		
			4,768,841 68
			$8,107,103 98
Account Cost of Midland Northern Railway ...			14,340 44
Account Cost of Des Plaines Valley Ry.			[illegible] 87
Account Cost of St. Paul Bridge & Terminal Co. ...			[illegible] 63
			$8,[illegible] 94

LANDS.

During the year ending June 30, 1915, 3,663.84 acres and 88 town lots of the Company's Land Grant lands were sold for the total consideration of $41,698.01. The number of acres remaining in the several Grants June 30, 1915, amounted to 327,530.81 acres, of which 18,790.19 acres were under contract for sale, leaving unsold 308,740.62 acres.

Appended hereto [Pamphlet Report] may be found statements, accounts and statistics relating to the business of the fiscal year and the condition of the Company's affairs on June 30, 1915.

By order of the Board of Directors,

WILLIAM A. GARDNER,
President.

CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RY.

THIRTY-FOURTH ANNUAL REPORT—FOR THE FISCAL YEAR TO JUNE 30, 1915.

To the Stockholders of the Chicago, St. Paul, Minneapolis and Omaha Railway Company.

The Board of Directors submit herewith their report of the operations and affairs of the Chicago, St. Paul, Minneapolis and Omaha Railway Company for the fiscal year ending June 30, 1915.

The Inter-State Commerce Commission having prescribed new Classifications of Accounts, effective July 1, 1914, the results of the preceding year, shown in this report, have been partially revised for the purpose of comparison.

Average number of miles operated, 1,752.81.

Operating Revenues:		
Freight	$11,523,103 44	
Passenger	4,983,699 89	
Other transportation	1,022,194 88	
Incidental	128,549 47	
Total operating revenues		$17,811,547 68
Operating Expenses (67.86 per cent. of operating revenues)		12,107,597 51
Net revenue from railway operations		$5,733,750 17
Railway tax accruals (5.69 per cent. of operating revenues)	$1,015,028 61	
Uncollectible railway revenues	4,834 59	
		1,019,863 20
Railway operating income		$4,713,886 97
Non-operating Income:		
Rental income	$269,811 98	
Dividend income	46,351 00	
Income from funded securities	15,220 00	
Income from unfunded securities and accounts, and other items	24,111 61	
Total non-operating income		355,494 59
Gross income		$5,069,381 56
Deductions from Gross Income:		
Rental payments	$673,696 23	
Interest on funded debt	2,152,312 50	
Other deductions	24,288 17	
Total deductions from gross income		2,850,296 90
Net income		$2,219,084 66
Disposition of Net Income:		
Dividends:		
7% on Preferred stock	$787,976 00	
7% on Common stock	1,298,934 00	
		2,086,910 00
Balance income for the year		$132,174 66

The results as compared with the preceding fiscal year were as follows:

Passenger revenue decreased	$432,010 30	
Other transportation revenue decreased	48,848 70	
		$480,859 00
Freight revenue increased	95,540 20	
Incidental revenue increased	16,583 09	
		112,123 29
Total operating revenues decreased		$368,735 71
Operating expenses decreased		726,519 41
Net revenue from railway operations increased		$357,783 70
Railway tax accruals increased	$41,145 18	
Uncollectible railway revenues decreased	1,834 59	
		46,580 37
Railway operating income increased		$311,203 33

Of the Operating Expenses for the current fiscal year, $6,599,357.35, or 54.51%, was paid employees for labour, as compared with $6,966,716.33, or 54.28%, paid during the preceding fiscal year. The decrease of $367,358.98 in the amount paid is accounted for as follows:—

Decrease account less time worked	$306,417 18
Decrease account lower rates of compensation	60,941 80
	$367,358 98

MILES OF RAILROAD.

The total number of miles of railroad owned June 30, 1915, was 1,685.22 miles

In addition to which the Company operated:

Under Trackage Rights—		
Northern Pacific Railway (Superior, Wis., to Rice's Point, Minn.)	1.58 miles	
Great Northern Railway (St. Paul to Minneapolis, Minn.)	11.40 „	
Minneapolis & St. Louis Railroad (Minneapolis to Merriam, Minn.)	27.00 „	
Illinois Central Railroad (Le Mars to Sioux City, Iowa)	29.20 „	
Sioux City Bridge Company (across Missouri River and tracks at Sioux City, Iowa)	5.99 „	
Chicago and North Western Railway (Sioux City to Sioux City Bridge Company)	.50 „	
	75.67 „	
Total miles of railroad operated June 30, 1915	1,752.81 „	

The above mileage is located as follows:

In Wisconsin	781.14 miles
In Minnesota	473.04 „
In Iowa	179.55 „
In South Dakota	88.20 „
In Nebraska	308.39 „
Total	1,752.81 „

In addition to the foregoing, the Company owned and operated 183.03 miles of second track, located as follows:—

In Wisconsin	157.00 miles
In Minnesota	24.23 „
In Nebraska	1.71 „
Total	183.03 „

FREIGHT TRAFFIC.

The details of Freight Traffic for the year ending June 30, 1915, compared with the preceding year, were as follows:—

	1914.	1915.	Increase. Amount.	Per Cent.
Freight revenue	$11,427,563.24	$11,523,103.44	$95,540.20	.84

	1914.	1915.	Percentage of Inc. or Dec.
Tons of revenue freight carried	8,466,632	8,794,488	+3.87
Tons of revenue freight carried one mile	1,294,143,291	1,336,106,367	+3.24
Average revenue received per ton	$1.35	$1.31	−2.96
Average revenue received per ton per mile	.88 of a cent	.86 of a cent	−2.27
Average distance each ton was hauled	152.85 miles	151.93 miles	− .60
Mileage of loaded and unloaded trains	4,255,990	4,026,069	−5.40
Average number of tons of freight carried per train mile	330.67	360.13	+8.91
Average number of tons of all freight carried per loaded car mile	19.39	20.39	+5.16
Average freight revenue per train mile	$2.69	$2.86	+6.32

PASSENGER TRAFFIC.

The details of Passenger Traffic for the year ending June 30, 1915, compared with the preceding year, were as follows:

	1914.	1915.	Increase. Amount.	Per Cent.
Passenger revenue	$5,415,710.19	$4,983,699.89	$432,010.30	7.98

	1914.	1915.	Percentage of Dec.
Passengers carried	4,881,961	4,767,826	−2.34
Passengers carried one mile	266,685,999	252,305,960	−5.39
Average fare paid per passenger	110.93 cents	104.53 cents	−5.77
Average rate paid per passenger per mile	2.031 cents	1.975 cents	−2.76
Average distance travelled per passenger	54.63 miles	52.92 miles	−3.13
Mileage of revenue passenger and mixed trains	4,510,639	4,349,764	−3.57
Average passenger-train revenue per train mile	$1.40	$1.34	−4.29

MAINTENANCE OF WAY AND STRUCTURES.

The total Operating Expenses of the Company for the year ending June 30, 1915, were $12,107,597.51; of this amount $1,956,803.49 was for charges pertaining to Maintenance of Way and Structures. Included in these charges are $130,942.38 for steel rails, $229,376.56 for ties, and the cost of reballasting 24.01 miles with gravel and cinders, also part cost of replacing 1,934 feet of wooden bridging with permanent work.

During the year 11,408 tons of new steel rails and 6,446 tons of usable and re-rolled steel rails were laid in track, a greater portion of which replaced rails of lighter weight; 372,974 ties of all descriptions were laid in renewals.

The details of the charges to Maintenance of Way and Structures for the year, compared with the previous year, were as follows:—

	1914.	1915.	Inc. or Dec.
Cost of Rails:			
New steel rails	$362,057 11	$362,580 63	− $523 48
Usable and re-rolled Rails	143,572 52	138,315 69	− 5,256 83
	$505,629 63	$500,896 32	− $34,733 31
Less value of old material and other items	366,663 79	369,953 94	+ 3,290 15
Net charge for rails	$168,965 84	$130,942 38	− $38,023 46
Cost of ties	253,396 76	229,376 56	− 24,020 20
Cost of Ballast	51,996 80	20,270 06	− 31,726 74
Cost of other Track Material	89,442 67	117,233 06	+ 27,790 39
Roadway and Track Labour	857,749 04	771,745 18	− 86,003 86
Total Roadway and Track	$1,696,179 11	$1,272,567 24	− $423,611 87
Other charges account of Maintenance of Way & Structures were as follows:—			
Bridges, Trestles and Culverts	272,054 49	135,910 88	− 136,043 61
Road Crossings, Fences, &c.	70,010 91	69,[illegible]	− [illegible]
Signs and Interlocking	30,288 21	28,082 14	− [illegible]
Buildings	244,206 25	207,458 28	− 36,747 97
Water Stations	2,636 23	5,368 76	+ 2,732 53
Superintendence	111,551 21	107,451 21	− 4,100 49
Roadway Tools and Supplies	23,742 73	24,502 41	+ [illegible]
Sundry Miscellaneous Charges	[illegible]	[illegible]	[illegible]
Total charges Account of Maintenance of Way	$2,[illegible]	$1,[illegible]	$[illegible] 21

The above charges for Maintenance of Way and Structures for the current year amount to 16.16% of the total Operating Expenses, as compared with 20.47% for the preceding fiscal year.

MAINTENANCE OF EQUIPMENT.

The charges on account of Maintenance of Equipment for the year ending June 30, 1915, compared with the preceding year, were as follows :—

	1914.	1915.	Inc. or Dec.
Locomotives	$915,313 10	$973,126 79	+$58,813 69
Freight-train cars	920,035 34	1,061,967 59	+141,932 25
Passenger-train cars	287,841 23	265,800 71	− 22,040 52
Work equipment	42,067 12	45,127 09	+ 3,059 97
Shop machinery and tools	53,788 02	51,300 56	− 2,487 46
Superintendence	67,983 97	68,929 43	+ 945 46
Sundry miscellaneous charges	76,095 15	68,704 54	− 7,390 61
Total charges account of Maintenance of Equipt.	$2,363,124 51	$2,476,956 71	+$113,832 20

The above charges for Maintenance of Equipment for the current year amount to 20.46% of the total Operating Expenses, as compared with 17.95% for the preceding fiscal year.

RESERVE FOR ACCRUED DEPRECIATION ON EQUIPMENT.

At the close of the preceding fiscal year there was a balance to the credit of the equipment reserve accounts of	$1,574,172 82
During the year ending June 30, 1915, there was credited to the equipment reserve accounts on account of charges to Operating Expenses for Accrued Depreciation	417,274 83
	$1,991,447 65
And there was charged during the year against the above amount the Accrued Depreciation previously credited this account on Equipment retired or transferred from one class of service to another	78,664 33
Leaving a balance to the credit of the equipment reserve accounts on June 30, 1915, of	$1,912,783 32

TRANSPORTATION EXPENSES.

The Transportation Expenses of the Company for the year were $6,737,697.17, or 55.65% of the Total Operating Expenses. Of this amount $3,639,774.85, or 54.02%, was for labour; $1,922,464.65, or 28.53%, was for fuel for locomotives; and $1,175,457.67, or 17.45%, was for supplies and miscellaneous items.

The total decrease in the charges, as compared with the previous year, was $195,205.38, distributed as follows :—

Decrease in amount charged for labour	$188,447 73
Decrease in amount charged for fuel for locomotives	121,627 28
Increase in amount charged for supplies and miscellaneous items	114,869 63
	$195,205 38

CAPITAL STOCK.

No Stock was issued or sold during the year. The Company's authorised Capital Stock is fifty million dollars ($50,000,000), of which the following has been issued to June 30, 1915 :—

Common stock and scrip held by the public	$18,559,086 69	
Common stock and scrip owned by the Co.	2,844,206 64	
		$21,403,293 33
Preferred stock and scrip held by the public	$11,259,911 63	
Preferred stock and scrip owned by the Co.	1,386,921 66	
		12,646,833 29
Total capital stock and scrip, June 30, 1915		$34,050,126 62

FUNDED DEBT.

Chicago, St. Paul, Minneapolis and Omaha Railway Consolidated Mortgage 6% Bonds of 1880 to the amount of $41,000 were issued for a like amount of Chicago, St. Paul, and Minneapolis Railway First Mortgage 6% Bonds of 1878, retired.

The total of the Funded Debt on June 30, 1915, was $39,387,634.09, of which $39,337,000 is outstanding, and the balance, $50,634.09, is held in the Treasury of the Company.

CONSTRUCTION.

The construction charges for the year ending June 30, 1915, were as follows :—

Balance Cost of Terminal Improvements at Minneapolis, Minn.		$40,020 56
Balance Cost of New Line, Sioux Valley to Omaha, Nebr.		21,014 50
Permanent Bridges (cost of new over old)		132,826 44
Betterments of Roadway and Track		120,207 62
Sidings and Spur Tracks		71,064 13
Buildings		113,207 64
Machinery and Tools		9,135 81
Miscellaneous Charges		16,322 34
Cost of two Coal Storage Plants		33,907 69
Improvements to Equipment		24,687 51
Total		$565,340 66
Less Original Cost of Equipment Retired as follows		
16 Locomotives	$137,800 00	
1 Passenger-train Car	3,300 00	
523 Freight-train Cars	311,935 28	
1 Work Car	1,750 00	
Other Items	90,457 10	
		545,122 38
		$73,218 38

LAND DEPARTMENT.

The Net Receipts from all Grants were $6,100.55.

4,200.83 acres were disposed of, leaving 72,905.19 acres unsold June 30, 1915.

Appended hereto (Pamphlet Report) may be found Statements, Accounts and Statistics relating to the business of the fiscal year and the condition of the Company's affairs on June 30, 1915.

By order of the Board of Directors,

WILLIAM A. GARDNER,
President.

GENERAL BALANCE SHEET, June 30, 1915.

ASSETS.		
Investments—		
Road and Equipment		
Balance to Debit of this Account, June 30, 1914	$74,182,654 43	
Add Sundry Construction and Equipment Expenditures for the year ending June 30, 1915, as see statement elsewhere herein	73,218 38	
		$74,255,872 81
Miscellaneous Physical Property		220,387 40

THE DENVER & RIO GRANDE RAILROAD CO.

TWENTY-NINTH ANNUAL REPORT—FOR THE FISCAL YEAR ENDED JUNE 30, 1915.

To the Stockholders of The Denver and Rio Grande Railroad Company:

The Board of Directors submit the following report for the fiscal year ended June 30, 1915.
The results were as follows:—

	1915.	1914.	Increase or Decrease. Amount.	Per Cent.
Average Miles Operated	2,577·40	2,583·27	− 11·81	− ·46
OPERATING REVENUES	$	$	$	
Freight	15,911,101 65	17,058,445 14	−1,147,343 49	− 6·73
Passenger	4,449,044 31	5,077,407 62	− 628,363 31	−12·38
Mail	344,969 77	308,938 97	+ 36,030 80	+11·66

Ratio of Operating Expenses to Operating Revenue	65·48%	69·77%		− 4·29

CAPITAL STOCK.

There has been no change in the Capital stock.

FUNDED DEBT.

The Funded Debt in the hands of the public was decreased $368,000 by purchase of $218,000 face value First and Refunding Mortgage 5% bonds for the Sinking Fund, which have been deposited with the Trustee, and $150,000 of equipment trust obligations were redeemed and cancelled.

NEW LINES.

A narrow gauge branch line was constructed in the State of New Mexico from Taos Junction (formerly Caliente) to La Madera, to serve the Hallack and Howard Lumber Company. The line is 16.43 miles long, and was placed in operation November 10, 1914.

Under contract with the Utah Railway Company and involving an annual rental charge of $191,220, there was taken over for operation November 1, 1914, the new line of railway extending from a point 2.4 miles west of Helper to Mohrland and East Hiawatha 27.43 miles, serving the coal properties of the United States Fuel Company. The completion of this road enabled the immediate discontinuance of operation of exceedingly heavy grade line between Price and Mohrland, Utah, 22.5 miles.

Second main track from Thistle to Provo (20.62 miles), begun in August 1913, was completed and put in operation August 28, 1914. This is the property of the Utah Railway Company, but is operated by this Company under the provisions of a contract dated November 1, 1913. Annual rental $43,500.

There was also taken over for operation 3.68 miles of track extending from a point 1.13 miles east of Helper to Kenilworth, Utah, to serve the coal property of the Independent Coal and Coke Company.

Details of all changes in mileage operated are shown on page 35 of full Pamphlet Report.

ROAD AND EQUIPMENT.

A classified list of Road and Equipment charges, aggregating $558,770.11, appears on page 18 of full Pamphlet Report.

The following are the important items:

The construction of the narrow gauge branch line Taos Junction to La Madera, New Mexico.

The laying in track of 9,330 tons of new 90-pound and 160 tons of new 85-pound section rail.

(Details of composition of track as to rail as constituted at the end of the year are shown on page 28 of full Pamphlet Report.)

Approximately 247,000 tie plates and 65,000 rail anchors were installed.

New steel bridges aggregating 481 lineal feet were erected, displacing those of lighter construction and 739 lineal feet of wooden bridges were eliminated by permanent filling.

The Colfax-Larimer Street viaduct in the City of Denver, being constructed over main line and yard tracks as mentioned in last year's annual report, is about 50% complete.

The rearrangement of tracks and laying of brick pavement on Wynkoop Street, Denver, mentioned in last year's report, was completed in June of this year.

Industrial sidings and yard tracks were constructed and extended to serve new or enlarged industries involving the building of 12 miles of track.

The item of $100,806.20 for "Grading" includes all roadbed work occasioned by the construction of additional track.

Ten new steel standard gauge mail and baggage cars were purchased and placed in service in October 1914.

OPERATION.

The total Operating Revenues were $21,823,256 21, a decrease of $1,770,405.17, or 7.50% under the previous year. The average mileage operated was 2,571.46, a decrease of 11.81 miles.

The revenue from freight traffic decreased $1,147,343.49, or 6.73%. Of this decrease 30% was due to ore and bullion shipments mainly attributable to the depressed condition of the copper industry during the first nine months of the fiscal year; 40% to merchandise and manufactured articles because of the general business depression and to transcontinental tonnage attracted through the Panama Canal; 15% to coal and coke, largely because of the depression in the copper industry, coupled with an unseasonable winter in the Northwest, and approximately 15% to live stock, wool, and lumber shipments.

A comparative statement of commodities giving tonnage moved is exhibited on page 33 of full Pamphlet Report.

The number of tons of revenue freight handled declined 10.04%, although the resulting tons-one-mile decreased but 5.52%, due to longer average haul of 6.34 miles.

The average revenue-per-ton-per-mile was $0.01186, and represents a decline of 3.03% under the previous five-year average.

The revenue from passenger traffic decreased 12.38%, or $628,363.31, of which 65% occurred in local travel and to which the operation of additional electric lines and of automobiles largely contributed.

The total number of passengers carried decreased 15.55%; the number carried one mile decreased 7.48%; the average revenue per passenger per mile was 1.93 cents—against previous five-year average of 1.97 cents.

Complete details of Operating Expenses, exhibiting a decrease of $2,170,898.33, or 13.19%, are recorded on pages 25 and 26 of full Pamphlet Report. For comparative purposes last year's figures have been revised to accord with the regulations of the Interstate Commerce Commission made effective July 1, 1914.

Combining the Maintenance of Way and Structures and Maintenance of Equipment expenditures, the ratio of these charges to Operating Revenues equalled 29.94%, as compared with the previous five-year average of 30.97%.

The expenditures per mile of road operated amounted to $988 for Maintenance of Way and Structures.

Notwithstanding substantial reductions in maintenance, the roadway and equipment are in gratifying condition.

The important additions and improvements to road and its equipment that were made feasible from the proceeds of the Adjustment bonds were concluded during the past fiscal year, and it is with much satisfaction that the management refers to the important gain in the efficiency of train operation that has resulted therefrom and is assured for the future.

The passenger train mileage has been reduced to the extent of 6.73 per cent.; total transportation charges have decreased 13.96 per cent., while operating revenues declined 7.5 per cent.

Traffic expenses were reduced $20,006.10, or 4.02 per cent. less than previous year.

The reduction of 16.8 per cent. in total freight train miles was largely accomplished by increasing the revenue tonnage per freight train mile 45.73 tons or 13.55 per cent.

The ratio of transportation expenses to operating revenues was 28.83 per cent.—the average for the five previous years was 33.44 per cent.

OPERATING INCOME.

While suffering a shrinkage in operating revenues of 7.5 per cent., and an increase of 1.14 per cent. in direct taxes, nevertheless operating income exhibits an increase of 6.34 per cent.

Net income, distinguished from operating income in that it represents final results after all deductions, was substantially the same as last year.

Appropriations from net income were :—

	$
For renewal fund and the sinking fund under First and Refunding Mortgage	273,044 89
For road and equipment	211,045 46
Total	484,090 35

leaving a credit for the year to profit and loss of $934,640.23.

With the exception of ordinary current accounts the Company has no floating debt.

Early in the calendar year it became evident that the March 1 interest on the Western Pacific First Mortgage Bonds could not be met either by the principal debtor or by this Company. Thereupon, at the instance of your officers and directors, a series of conferences were held with banking houses representing, directly and indirectly, a large amount of said bonds, with the object in view of formulating a scheme of financial readjustment. It was hoped that a friendly readjustment of the financial relations of the two companies could be carried into immediate effect, thus avoiding receivership of Western Pacific, but before this was physically possible the March 1 interest was defaulted, and on March 5, 1915, the United States Court appointed receivers for the property.

As publicly announced, a committee has been formed to represent the Western Pacific First Mortgage Bondholders, and at some future time the question of this relationship between the two companies will have to be negotiated between your Company and this committee.

By order of the Board of Directors.

B. F. BUSH, *President.*

CHESAPEAKE & OHIO RAILWAY

THIRTY-SEVENTH ANNUAL REPORT—FOR THE FISCAL YEAR TO JUNE 30, 1915.

Richmond, Va., September 16, 1915.

To the Stockholders :

The Thirty-seventh Annual Report of the Board of Directors for the fiscal year ended June 30, 1915, is herewith submitted.

The average mileage operated during the year by The Chesapeake and Ohio Lines was 2,369.2 miles, an increase over the previous year of 23.4 miles. The mileage at the end of the year was 2,371.7 miles, an increase of 4.3 miles over mileage on June 30, 1914. See schedule on page 12 of pamphlet report.

RESULTS FOR THE YEAR.

	Year to June 30, 1915.	—Inc. or Dec.—	
	$	$	%
Operating revenues were	39,464,036 99	+ 2,004,173 10	+ 5·35
Operating expenses were	27,556,413 50	+ 1,142,514 99	+ 4·33
Net operating revenue was	11,907,623 49	+ 861,658 11	+ 7·80
Taxes were	1,349,496 96	+ 18,562 07	+ 1·39
Operating income, taxes deducted, was	10,558,126 53	+ 843,096 04	+ 8·69
Miscellaneous income was	1,018,219 08	— 1,126,431 18	—52·52
	11,576,345 61		
Rentals and other payments were	814,767 13	— 138,449 99	—14·52
Income for the year available for interest was	10,761,578 48	— 144,885 15	— 1·33
Interest (75·25% of amount available) amounted to	8,098,041 86	+ 163,394 02	+ 2·06
Net income for the year, equivalent to 4·24% on capital stock outstanding, amounted to	2,663,536 62	— 308,279 17	—10·37
Dividend paid during the year : One dividend of 1%	627,816 00		
Remainder	2,035,720 62		

FINANCIAL.

The changes in funded debt in the hands of the public during the year were as follows :—

	Retired. $
4 per cent. Big Sandy Ry. First Mtge. Bonds	82,000 00
4 per cent. Coal River Ry. First Mtge. Bonds	36,000 00
4 per Cent. Greenbrier Ry. First Mort. Bonds	20,000 00
4 per cent. Raleigh and South-Western Ry. First Mort. Bonds	23,000 00
Equipment Trust Obligations	1,514,392 00
Decrease	1,675,392 00

Other changes in obligations shown under funded debt on balance sheet of June 30, 1915, were :—

	Increase. $	Payments. $
5 per cent. First Lien and Improvement Mtge. Bonds	3,147,000 00	
6 per cent. Equipment Contracts—General Equipment Co.		16,800 00
5 per cent. Equipment Contract—Standard Steel Car Co.		583,252 23
5 per Cent. Equipment Contract—Central Locomotive and Car Works	159,750 00	56,537 15
6 per cent. Equipment Contract—American Locomotive Co.	147,300 00	104,876 60
	3,454,050 00	761,465 98
Net increase	2,692,584 02	

The Five per Cent. First Lien and Improvement Mortgage Bonds were issued during the year for additions and betterments and other capital purposes. The entire issue of these bonds, $40,270,000 face amount, is pledged as collateral for your Company's Five-Year Five per Cent. Secured Gold Notes, no part of the unissued notes having been sold during the year.

Mention was made in last year's report of the sale of your Company's holdings of the capital stock of The Kanawha and Michigan Railway Company. The transaction was completed October 7, 1914, netting your Company a profit of $1,119,315.50, which sum was transferred to surplus. The proceeds of the sale were deposited with the Trustee under the First Lien and Improvement Mortgage, and will be re-invested in improvements and investments, which is permitted under that Mortgage.

Your Company acquired during the year 479 shares of the capital stock of The Chesapeake and Ohio Northern Railway Company and additional shares of stock of White Sulphur Springs, Incorporated, and of Logan and Southern Railway Company. Additional First Mortgage Bonds of Elkhorn and Beaver Valley Railway Company were acquired at par in reimbursement for advances made for construction purposes.

Further shares of stock and First Mortgage Bonds of The Chesapeake and Ohio Railway Company of Indiana were issued in respect of the cost of certain additions and betterments made to that line, and were pledged under your Company's First Lien and Improvement Mortgage.

A statement of charges to property accounts will be found on page 16 of full Pamphlet Report, showing a net addition of $3,024,127.55; that is, $1,045,134.97 was added to cost of road and $1,978,992.58 was added to cost of equipment.

A schedule of securities owned June 30, 1915, will be found on page 17 of Pamphlet Report.

During the past six years your Company's increase in capital liabilities in hands of the public, its principal acquisitions of stocks and bonds of other companies, and its expenditures for equipment, branch-line construction, second track and other additions and betterments, have been as follows :—

GENERAL REMARKS.

The equipment inventory as of June 30, 1915, was as follows :—

		Inc. or Dec.
Locomotives owned	605	+ 19
Locomotives leased	212	— 27
Total	817	— 8
Passenger train cars owned	358	— 8
Passenger-train cars leased	29	—
Total	387	— 8
Freight-train and miscellaneous cars owned	23,911	+ 1,603
Freight-train cars leased	22,435	— 387
Total	46,346	+ 1,216

The changes during the year in the accrued depreciation of equipment account were as follows :—

Balance to credit of account June 30, 1914	$4,212 541 93
Amount credited during year ended June 30, 1915, by charges to operating expenses	786,491 51
Charges to account for: Accrued depreciation on equipment retired during year—20 locomotives, 6 passenger, 1,060 freight and work cars, $92,227.62 ; accrued depreciation on cars changed in class during year, $2,526.15	94,753 77
	$691,737 74
Balance to credit of account June 30, 1915	$4,904,279 67

	1915.	1914.	Inc. or Dec.
Operating revenues amounted to	$39,464,036 99	$37,459,863 89	+$2,004,173 10
Net operating revenue	11,907,623 49	11,045,965 38	+ 861,658 11
Operating ratio	69·8%	70·5%	— ·7%
Tons of revenue freight carried one mile	8,138,347,516	7,064,650,082	+1,073,697,434
Revenue train load, tons	906	870	+ 36
Revenue tons per loaded car	32·3	30·9	+ 1.4

New industries were established during the year as follows : 16 manufactories of farm implements and farm products, 15 manufactories of lumber products, and 30 manufactories of mineral, metal, and other products. At the close of the year there were 215 companies organised for producing coal and coke on your Company's lines, with a total of 338 separate mines, of which 319 were in actual operation. Of the 1,219 coke ovens 445 were in blast, and of the 10 iron furnaces, having a total daily capacity of 1,490 tons, six are in operation, with a total daily capacity of 950 tons of pig iron. 214 new settlers located in your Company's territory during the year, these settlers having purchased 49,011 acres of land from private parties, with an investment of $1,288,811.

An extension of Pine Creek Branch of Logan and Southern Railway, eight-tenths of a mile, has been completed.

The construction of about thirty miles of the Chesapeake and Ohio Northern Railway has been begun during the year from a point near Edgington, Kentucky, to a point near Waverly, Ohio, on the Norfolk and Western Railway, including a steel bridge across the Ohio River, which is expected to be completed in the fall of 1916. Arrangements have been concluded by The Chesapeake and Ohio Northern Railway Company with the Norfolk and Western Railway Company by which trackage rights are secured over the Norfolk and Western Railway from a connection near Waverly, Ohio, to the line of the Hocking Valley Railway at Valley Crossing near Columbus, Ohio, which provides a through route from your Company's main line to the line of the Hocking Valley Railway.

The revenue coal and coke tonnage was 21,325,742, an increase of 10.8 per cent. ; other revenue freight tonnage was 8,722,712, an increase of 3.0 per cent. Total revenue tonnage was 30,048,454 tons, an increase of 8.4 per cent. Freight revenue was $31,288,536.62, an increase of 8.4 per cent. Freight-train mileage was 8,979,417 miles, an increase of 10.6 per cent. Revenue ton miles were 8,138,347,516, an increase of 15.2 per cent. Ton mile revenue was 3.84 mills, a decrease of 6.1 per cent. Revenue per freight-train mile was $3.484, a decrease of 2.0 per cent. Revenue tonnage per train mile was 906 tons, an increase of 4.1 per cent. ; including Company's freight, the tonnage per train mile was 962 tons, an increase of 3.8 per cent. Tonnage per locomotive, including Company's freight, was 870 tons, an increase of 5.2 per cent. Revenue tonnage per loaded car was 32.3 tons, an increase of 4.5 per cent. Tons of revenue freight carried one mile per mile of road were 3,435,061, an increase of 14.1 per cent.

There were 6,487,803 passengers carried, a decrease of 0.1 per cent. The number carried one mile was 269,379,558, a decrease of 7.6 per cent. Passenger revenue was $5,696,088.37, a decrease of 6.6 per cent. Revenue per passenger per mile was 2.115 cents, an increase of 1.1 per cent. Number of passengers carried one mile per mile of road was 113,700, a decrease of 8.5 per cent. Passenger-train mileage was 5,008,603, a decrease of 4.2 per cent. Passenger revenue per train mile was $1.137, a decrease of 2.5 per cent. ; including mail and express, it was $1.345, a decrease of 1.7 per cent. Passenger-service train revenue per train mile was $1.375, a decrease of 1.8 per cent.

There were 7,353.2 tons of new rails (3,054.1 tons 100-lb. and 4,229.1 tons 90-lb.) equal to 49.8 track miles, used in renewal of existing main tracks. 2,252 tons of relaying rail were laid in various parts of the lines, with an aggregate expenditure of $29,359.00. 13,500 tons of 100-lb., 3,500 tons of 90-lb., and 500 tons of 125-lb. rail were purchased after July 1, 1915, a portion of which has been laid prior to the date of this report.

The average amount expended for repairs per locomotive operated was $3,013.29 ; per passenger-train car $920.85 ; per freight-train car $81.88.

Mr. Frank A. Vanderlip resigned as a director and member of the Executive Committee August 20, 1914, and Mr. Charles E. Graham was elected a director and member of the Executive Committee on that date to succeed Mr. Vanderlip.

The Board renews its acknowledgment to the officers and employees for faithful and efficient services performed during the year.

By order of the Board of Directors.

FRANK TRUMBULL, *Chairman.*
GEO. W. STEVENS, *President.*

MISCELLANEOUS.

ACME TEA CHEST CO.—Final dividend of 7½% on Ordinary, making 10% for the year.

ALOR PONGOH RUBBER ESTATE.—Interim dividend of 5 . less tax.

BABCOCK AND WILCOX.—Interim dividend of 6 on Ordinary, tax free.

BALMORAL (CEYLON) ESTATES CO.—Interim dividend of 7%, less tax, on Ordinary.

BANK OF ADELAIDE.—Interim dividend for half-year at 8% per annum.

BANK OF SCOTLAND.—Dividend for half year ended August 31 at rate of 16 per annum, less tax.

BOMBAY GAS CO.—Interim dividend of 3%.

BRITAIN STEAMSHIP CO.—Interim dividend of 10*s.* per share, tax free.

BRITISH GENERAL INSURANCE CO.—Interim dividend at the rate of 5% per annum.

BUCKLEY AND NUNN.—Dividend at the rate of 5 per annum, tax free, on Ordinary, making 7½% for the year.

CEYLON (PARA) RUBBER CO.—Dividend of 12½ . less tax.

CHAPLIN, W. H., AND CO.—Interim dividend of 2½%.

CHERAS RUBBER ESTATES.—Interim dividend of 2 (actual), less tax.

CITY OF SANTOS IMPROVEMENTS CO.—Interim dividend on Ordinary.

CLAN LINE STEAMERS.—Interim dividend of 25*s.* per share, tax free, on Ordinary.

COMMERCIAL UNION ASSURANCE CO.—Interim dividend of 10*s.* per share, less tax.

CONSOLIDATED MALAY RUBBER ESTATES.—Interim dividend of 4*d.* per share, less tax.

CRAIGHEAD TEA CO.—Interim dividend of 8%, less tax, on Ordinary.

DIRECT UNITED STATES CABLE CO.—Interim dividend of 2*s.* per share, less tax.

EDINBURGH INVESTMENT TRUST.—Interim dividends on Deferred stock at rate of 12% per annum, less tax.

EVANS, D. H., AND CO. FOUNDERS' SHARES.—No interim dividend will be paid.

FREEHOLD AND LEASEHOLD INVESTMENT.—Dividend at the rate of 2½% per annum on Ordinary, making 2½% for the year.

FROME UNITED BREWERIES CO.—Further dividend of 6%, making 10%.

GANDY BELT MANUFACTURING.—Interim dividend of 4% (actual), less tax.

GULA-KALUMPONG RUBBER ESTATES.—Interim dividend of 1*s.* per share, less tax.

HEAWOOD TIN AND RUBBER ESTATE.—Interim dividend of 5 actual, less tax.

HIGGODA RUBBER ESTATE.—Interim dividend of 4% on Ordinary, less tax.

HIGHLANDS AND LOWLANDS PARA RUBBER CO.—Interim dividend of 5% (actual), less tax.

IMPERIAL TOBACCO COMPANY OF CANADA.—Interim dividend of 1½% on Ordinary.

INTERNATIONAL LINOTYPE.—Interim dividend of 2½%.

LANCASHIRE DYNAMO AND MOTOR CO.—Interim dividend at rate of 6% per annum on Ordinary.

LINDOOLA TEA CO.—Interim dividend of 2%, less tax, on Ordinary.

LONDON AND THAMES HAVEN OIL WHARVES.—Interim dividend at rate of 5% per annum, less tax, on Ordinary.

LONGAI VALLEY TEA CO.—Interim dividend of 2%, less tax.

MEETINGS
OF PUBLIC COMPANIES.

THE RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED.

THE sixth ordinary general meeting was held on October 8 at the Cannon Street Hotel, Cannon Street, E.C., Mr. Charles Arthur Lampard (the Chairman) presiding.

Mr. J. S. Woodward, A.C.A., on behalf of Messrs. Harrisons and Crosfield, Limited, the Secretaries, read the notice convening the meeting and the report of the auditors.

The Chairman: Ladies and Gentlemen,—The report and accounts have been circulated now for some considerable time, and I have no doubt you will allow me to take them as read. In the first instance, we have to regret the absence of two of our directors to-day; but I feel quite sure that, when I tell you the reason, you will agree with me that there is no necessity on my part to apologise for that absence, because they have both placed their services at the disposal of the State, which has the first claim in the present crisis on every one of us who can be of any use. In regard to Captain Hoare, he is with his regiment, and in regard to Sir Frank Swettenham, he is working very hard indeed at that much abused office, the Press Bureau. Pursuing my usual custom, I will first of all review the figures of the balance sheet.

The Balance Sheet.

Turning to the liabilities side, you will see there is no change in our authorised capital, which remains at £2,000,000 sterling. The issued capital is £1,401,538—I am giving it to you in round figures—as against £1,400,000, and the called-up capital is £894,711, as against £725,736 a year ago—an increase of £168,974. This increase is due to the call of 2*s.* 6*d.*, made in January last, and the balance is due to the exercise of 1,538 options. The premiums account remains the same as it was last year, £582,577. Loans amount to £417,633, as against £257,000 last year, or an increase of £160,633. The profit and loss account is £109,309, against £107,655—an increase of £1,654. Turning to the assets side, the investments in shares and debentures amount to £915,189, as against £862,789 last year—an increase of £52,400. The liability for calls not yet made is £55,013, as against £79,480 last year, or a decrease of £24,467. The cost of properties and development amounts to £755,021, as against £596,769 last year, an increase of £158,252. Debtors are £1,764, as against £7,207 a year ago, a decrease of £5,443. Loans are £115,080, as against £19,929 last year, an increase of £95,151; and cash at bank is £21,925, as against £18,299 last year, an increase of £3,626. The net result of all these figures which I have given you is that the funds employed have increased by £305,803, and this increase is made up as follows:—New investments and calls have absorbed £52,400, properties £158,252, and loans made £95,151; total, £305,803. And these funds have been provided by:—Increased capital receipts, £164,388; loans received, £139,761; and the increase in profit and loss, £1,654, which make up the same total of £305,803. The increase in investments is partly due to calls, which have amounted to £31,670, and new investments, which have absorbed £20,730. The increase in properties is due to their gradual development; and the increase in loans is due to the necessity to find funds for some of the companies in which we are largely interested, and which, under present conditions, they could not get by the usual method of issuing fresh capital. In this connection your auditors refer to the amount which, if called upon, the Trust is liable to advance under agreements with various companies in which it has large interests. I might mention that this liability is spread over a long period in any case, and that whatever is advanced would be secured.

Value of the Trust's Investments.

The amount invested in the Companies printed in the report is £900,923, and it accounts for 98.4% of the total investments held. Those not given amount to only 1.6%, and they are quite small holdings. Loans and investments together amount to £1,030,270, and of this amount 73.06% is invested in sterling shares, 3.16% in rupee shares, 3.30% in guilder shares, and 20.48% in sterling Debentures and secured loans. A valuation of the shares based on the current market prices at March 31 was made as usual by the Company's brokers, and it showed a depreciation then of £193,306, against a depreciation in the corresponding period of the previous year of £198,788. This shows an improvement, a recovery of rather over £5,000 between March 1914 and March 1915. At the date of our last meeting, however, those of you who were present will remember that I pointed out that the depreciation then—*i.e.*, in July 1914—had risen to £275,641, but the depreciation now, as worked out last night, has gone the other way, I am glad to say, for our depreciation has gone down to £161,000, which shows the decided improvement between the position at this meeting to-day and the meeting that we had in July 1914 of £114,000. This, I think, is a most encouraging factor. We have always stated that, in our judgment, the depreciation which we have had to record for a considerable time past was largely artificial, and that it would gradually disappear as our properties came into bearing, and this year the figures which I have given you show that we have made very distinct progress in that direction, and that too in spite of a great deal of depression due, of course, to the War.

Development of Properties Owned.

Turning to the properties owned entirely by this Trust, as I have mentioned the amount invested in them is £755,021. The development of these properties at present is the most important part of this Trust's operations, and when they become revenue producing we shall derive from them a very large portion indeed of our profits. The long wait necessary between planting and a profitable return is gradually coming to an end, but so far the tea and the rubber could not and have not, of course, contributed in any way towards our revenue. The total area of these properties, as set forth in the report, amounts to 54,577 acres. At the date of the balance sheet we had planted 6,019 acres in tea and 3,613½ acres in rubber, and tea in course of planting was 2,475 acres—a total of 12,107½ acres. Since our last report this shows an increase in the planted area of 1,299½ acres—1,145 acres of which are in tea and 154½ acres in rubber. This planted area is divided into nine estates, instead of 10 a year ago, two in Sumatra having been amalgamated to facilitate superintendence and economise in the management. Eight of these estates are in Sumatra and one in Southern India. Of the Sumatra estates six are planted in tea and two in rubber. Of the estate in Southern India, practically half is planted in tea and half in rubber, the two cultivations, of course, being kept separate. For convenience in bookkeeping the accounts of the estates run from January to December, and our object in this is the desire to incorporate in the Trust's accounts—which cover, of course, the period from April to March—the accounts of the properties without undue delay, although this year I regret very much that there has been delay, a delay which has been inevitable and entirely beyond our control.

Tea Production in Sumatra.

With regard to the estates situated in Sumatra, during the past year the first factory for tea was in work and produced its initial crop of 513,390 lb. As you will see from the report, this initial crop cost all-in 10.66*d.*, realised 9.03*d.*, and left a loss of £3,405, which has been charged to profit and loss account. It would have been a perfectly legitimate thing, of course, to charge that to capital. The high cost of this initial crop—of any initial crop—really is inevitable, both in tea and rubber; but it is no guide at all to what the eventual cost of production will be. As the area gets into full bearing yields will increase and costs come down, and even during the current year we look for a very considerable profit from our tea. We are, moreover, satisfied—and that is the great thing, I think, which you should have in your minds—that in due course our tea will be produced at a low cost and yield us a very good profit. Later on I shall give you some figures which we have had by telegram, which will show you how satisfactorily the costs are already coming down. Our second tea factory we expect was completed at the end of September, and the third factory will be finished at the end of this year, or early next year. There have been, of course, many difficulties to contend with in developing tea estates in Sumatra, a country which was entirely new to this industry, and these difficulties have, of course, been accentuated this year very much by the War; but while the cost of opening has been high—higher than we expected—the growth of the business is splendid, and the yield per acre will be highly satisfactory, and considerably higher than we originally anticipated. This is borne out by the reports from Mr. Cockburn, who has spent the whole of his life in Ceylon [illegible] and whose visits to Sumatra we refer to in our report. There was a doubt when we originally started planting tea—there must have been a doubt in a place where no tea had been planted before—but I am glad to say that this doubt has been set at rest; there is no doubt about the yield and no doubt about the quality.

Rubber Production Commenced.

Turning to the rubber, the two estates that we have in rubber are Siantar and Simarito. The first one is 1,559½ acres and Simarito [illegible] acres. The initial crop from these two estates, secured this year, amounted to 26,450 lb., and the proceeds and costs of this have been taken to development. They about balance. The

condition of the rubber estates is reported to be entirely satisfactory, and the new permanent factory on the Siantar estate was expected to be completed by the end of September, and the one for Simarito will be completed at a later date. As the two estates adjoin, the first factory will for a time manufacture for both. Transport in the past has been one of the difficulties we have had to contend with. The district, as I have always made it quite plain to you, was entirely isolated when we first went there. To transport heavy machinery and food for our large labour force it was necessary to employ lorries, and these to start with had to run over very rough roads, entailing a great deal of wear and tear. This difficulty, however, is practically at an end, for not only have the roads been much improved, but the railway is now nearing completion and will be opened next year. The railway passes through two of the Trust estates—Siantar and Martoba—and there will be a station on the latter property, and the central station at Siantar is also within easy reach of all properties owned by this Trust. The labour force employed, apart from local labour, on the Sumatra estates was 6,000, and the health was quite satisfactory; and no doubt this result is due to the very excellent doctor and also to the up-to-date hospital which we have erected, and the value of which is becoming increasingly apparent. The outbreak of war for a time disorganised the recruiting of additional labour, but the management is satisfied that this is only temporary, and that no permanent difficulty will occur in this connection.

Distribution of Investments.

With regard to the Southern India Estate there are 600 acres under rubber and 584 acres under tea. This property will produce its initial crop of tea this year, and the factory for this is in course of erection. The tapping of rubber will, we expect, commence probably a year hence. The general condition of this estate is reported to be quite satisfactory.

Of the sum invested in properties alone, excluding investments, 29.9% is in rubber, 66.4% in tea, and 3.7% in undeveloped land. The crops estimated, as you see from the report, are for tea 1,195,000 lb., and for rubber 130,000 lb., but from a telegram received we expect that the crop of tea will be increased to 1,390,000, and the rubber crop will be reduced to 100.000 lb. The costs are estimated at 6*d.* f.o.b. for the tea and 1*s.* 4*d.* f.o.b. for the rubber, both showing a very satisfactory reduction, and both those prices will yield us undoubtedly a good profit. The cost of bringing our produce home, of course, has risen. Roughly speaking, on tea it means ¾*d.* per lb. that we have to pay by way of additional freight and war insurance, and on rubber possibly more than that. The produce harvested up to the end of September—a period of nine months—was: Tea 889,862 lb., and rubber 69,073 lb. Now, coupling the properties and investments together, the combined amount invested is £1,670,210, against £1,459,559 a year ago, and this is distributed as to 46.5% in rubber, 46 3% in tea, 5.6% in tobacco, coconuts, &c., and 1.6% in undeveloped land. These interests, as a total, represent a holding by this Trust of 25,784 acres, cultivated in rubber, tea, tobacco, and coconuts. Coupling investments, properties, and loans together, the total amount invested is £1,783,987. So far only 37.3%, or £666,575, has given us any return, and as yet even that return is a very small one, while 62.7%, or £1,117,413, has as yet given us no return at all. As our investments and properties mature, as they are steadily doing of course, day by day, the amount of the capital invested giving a return will also increase, and during the current year we look for a partial return—not a full return by any means, but a partial return—on 69%, or £1,231,677, of the sum invested, leaving 31%, or £552,311, unremunerative; and this process will continue until the whole sum becomes remunerative. As the cultivated acreage owned by this Trust in its investments and properties combined represents, as I have previously mentioned, 25,784 acres, the revenue derived therefrom, when mature, will undoubtedly be sufficient to give a satisfactory return on the whole sum invested, but, like all development undertakings, it calls for patience, and the consolation is that if you have that the result in the end is certain. While we have certain small interests in tobacco and coconuts, we are mainly interested in rubber and tea, almost in equal proportions. I pointed out to you that the percentages are 46.5% rubber and 46.3% tea, but bringing these two things together does not indicate that we have the slightest nervousness in regard to rubber, but that we believe in a Trust like this it is a wise thing to have a dual interest in two products such as tea and rubber, both of which have a wonderful future before them.

Profit and Loss Account.

Turning to the profits, our gross profits amounted to £28,236. Our gross expenses, including interest on loan and the loss on this year's tea crop, amounted to £28,614, which shows a small loss of £378. We, however, recovered £2,031 from income tax paid in excess last year, and, therefore, our profit and loss balance is increased by £1,653, and amounts to £109,309, as against £107,655 last year, and, with your consent, we propose to carry forward this amount. The expenses include £18,372 for interest on loans, and I need hardly point out to you, I think, that if we had not incurred those loans it would have meant calling up the uncalled capital more rapidly, which, under present conditions, it was not our desire to do. Had we, however, called up our capital we should have avoided this interest charge, and the £18,000 odd would have appeared as a profit. Nearly the whole of the revenue this year has been derived from dividends and interest, and while these show an increase, it has not been quite the increase we looked for, because all the Companies in which we were interested last year, wisely, I think, were very conservative in regard to the distribution of dividends. The profits from sales of shares and commissions have been trivial. We did not sell shares because we believed that they would advance in value, and the figures which I have given you show that that view was the correct one. The profits from other sources were almost entirely stopped by the War.

Effects of the War.

A little over a year ago I told you that I refused to believe that the whole world was going to allow itself to be involved in war over the alleged transgression of one small State. In common with many others, I was wrong, and we now know that Serbia was only seized upon as an excuse for a long-premeditated aggression on the part of Germany, which this country and its Allies in self-defence were compelled to resist. Apart entirely from the individual sorrow which it has brought to a great many of us, it has, of course, temporarily, I believe, damaged our business interests, and it has affected this Trust in various ways. It has affected it by raising the rates of interest and so increased the cost of its finance; it has raised the cost of freights and all materials, and has delayed and increased the expenses of our factories and machinery; it has made it necessary for us to find money for some of the companies in which we are largely interested, as these companies could not have raised that money by further issues of capital. At the outbreak of war it seriously interfered with the work on the properties, necessitating a revision of the staff and a modification of our general policy, entailing a curtailed planting programme. Some of these difficulties were temporary and, I am glad to say, have mainly disappeared, whilst the others will remain for the period of the war at least. On the other hand, the War has demonstrated, I think in a very wonderful way, what we have always known—those of us who have been interested in the industry—the enormous importance of the plantation industry. It has emphasised the necessity of rubber for mechanical traction both in war as well as in peace. I do not think it necessary for me to say anything more about rubber. I have had to defend rubber in years past, when there were a great number of people who doubted its prospects; but the necessity for now defending it is over. It is realised what a great industry it is, what a great future it has got before it, and of what enormous value it is to this country in the crisis through which we are now passing. None of us looked forward, at least I did not look forward, to this War when I was thinking about this industry in the early days, but if one had thought about this War being likely to occur it would have been the greatest justification imaginable for creating this plantation rubber industry.

Tea Prospects.

In regard to tea, the prospects are, I think, equally encouraging. At the outbreak of war prices fell, and the initial crop harvested for the period under review was sold prior to the subsequent recovery in price, which came about as the outcome of the increased demand. We shall benefit this year both from a reduced cost of production and from an advance in price, and while prices of tea generally may be temporarily interfered with by the imposition of this fresh duty, when peace is restored a great many changes will take place, one of which will, I believe, be a largely increased demand for, and consumption of, tea, not only in this country, but more particularly in Russia.

Value of the Trust's Shares.

I would again impress upon you as I have always done, that this is a development Trust, and that its revenue cannot largely increase until its own properties, and those in which it is largely interested, reach the productive stage. We are getting nearer to this all the time, both with our own properties and those in which we have large interests. It may at times appear to you as being a slow process, but those of us who have been interested in the development of these properties know that in regard to rubber it takes some eight years, and in regard to tea some six years, before you can get any return worth speaking about. However, it only requires patience, and if you exercise patience I am absolutely certain that this Trust will justify the belief that we all have in it. No dividend being paid this year, there may be some shareholders who are quite unable to gauge the value of their shares in this Trust, and, therefore, I feel it my duty to give you some indication of what I believe to be the intrinsic merits of the shares, so that you may be guarded against unduly sacrificing your interests. The net assets of the Company amount in round figures to £1,400,000, and the fully paid up capital and the partly paid—that is 15*s.* per

share paid up—to-day amounts to £1,063,654, leaving a surplus of £336,346. This divisible amongst the shareholders means a premium on the present partly paid shares of 4*s.* 9*d.*, instead of a discount of practically 5*s.* 6*d.* per share. That is what I believe to be the exact position to-day in regard to what is commonly called the break up value price of your shares.

Mr. Lea-Smith: You mean to say that the shares are worth 19*s.* 9*d.*?

The Chairman: That is right. Now, gentlemen, I have much pleasure in proposing the adoption of the report and accounts, and I will ask Mr. Hamilton to be good enough to second the resolution, and then, if there are any points which I have missed, or any questions which you would like to ask me, I shall endeavour to answer them to the best of my ability.

Confidence in the Future.

Mr. Edward L. Hamilton: Ladies and gentlemen, the Chairman has given you such a clear and exhaustive statement of the affairs of the Trust, and has dealt so fully with its prospects, that it is not necessary for me to do more than formally second the adoption of the report and accounts. I should, however, like to say that I have absolute confidence in the future of the tea and rubber properties owned by the Trust which it is developing, and also in the future of those companies in which we have such a large interest. I am satisfied that they will return a handsome yield on the money which we have invested in them. Our Chairman has told you that it is a very long process, which I admit, but I have no doubt whatever that your patience will eventually be rewarded. With these remarks I beg to second the adoption of the report and accounts.

Shareholders' Questions and Criticisms.

Mr. J. Lea Smith said that hitherto he had always been satisfied with the reports issued by this Company, but he could not say the same in regard to the present report. The Chairman had laid a lot of figures before the shareholders which it was impossible for them to follow at a meeting, but he had not said anything about whether they were going to have a call or not, nor had he said a word about the options. Those options would run out in March of next year, and that being so the directors ought long ago to have told the shareholders whether they proposed to extend such options until, at any rate, six months after the termination of the War. He did not think the shareholders were being properly treated by the directors, who should tell them frankly and fully what they were going to do. There was one further point on which he would like some information. A good many companies were reconstructed and brought under the management of Messrs. Harrisons and Crosfield. This applied to the Asahan and Kasintoe, which had been reconstructed during the past year, but it did not appear that this Trust had taken up an interest in those undertakings.

Mr. Charles Lock remarked that he shared the disappointment which Mr. Lea Smith had expressed with regard to the contents of the report and accounts. In previous accounts very fair profits had been shown, but these had been lumped together, so that it was quite impossible to discover from what sources of business the Company's revenue had been derived. It was a great disappointment to him to find that, instead of being an investment Trust deriving their income partly from dividend-paying investments and partly, perhaps, from properties which they themselves were developing, they had put practically all their money—something like £1,500,000—into existing companies, hardly any of which were paying a dividend, while as regarded their undeveloped properties, naturally they could expect nothing from them for some little time. This appeared to him to be very rash and indiscreet finance; in fact, it meant that they were putting all their eggs into one basket in the worst possible and most vicious form. If they had put their money into something speculative which was producing a high rate of dividend for the time being there would have been something to be said for it, but to put all their money into things which were not yielding any income was the height of folly, and did not inspire confidence in the administration or foresight of the board. He did not wish to imply that the Trust was in a bad position, but he made these remarks with the object of endeavouring to inculcate a little more caution and foresight into the operations of the board. He was pleased to hear from the Chairman that 69% of the Company's investments, including properties, were likely to be remunerative during the coming year. That was to a certain extent reassuring, because it meant that if they received 5% on that portion of their capital it would represent practically a dividend of 3% on their entire capital. In the balance sheet, however, there were temporary loans to the amount of £417,000, and it was quite possible that the revenue derivable from those investments would be largely swallowed up by the interest payable on such loans. Moreover, the Trust was under liability to advance £266,000 to the various companies in which it was interested. There was no reference to this in the auditors' report last year, and he therefore wished to know whether the liability had been undertaken during the period under review. If the board had plunged into obligations to that extent in a period like the past year, he for one would call it somewhat rash. Those two figures represented an aggregate liability of £683,000, and the shareholders no doubt would have to pay up their 5*s.* a share in order partially to meet that liability. If so, he would not quarrel with that for a moment, for it would be sound finance to do it under the existing circumstances. He did not call it sound finance to have got into that position, but having got into it they must get out of it if they could. It was satisfactory to learn that the net depreciation on investments of £193,000, mentioned in the auditors' report, had since been reduced to £161,000. So far as it went that was encouraging. Referring to the profit and loss account, the speaker said that, in his opinion, it was highly improper to take credit therein for interest accrued, especially in view of the fact that this course did not appear to have been adopted in previous years. The net result of the profit and loss account, even taking in the accrued interest, was a loss of £377, which was a lamentable result considering the large amount of capital invested. Having regard to the present liabilities of the Company he would urge upon the board that no further obligations of any kind should be entered into.

Mr. Michael asked what further expenditure had been incurred on the properties since the accounts were made up.

The Options on the Shares.

Mr. Dean inquired whether it was the intention of the directors to extend the options, and also whether the Company had sufficient resources to meet its present liabilities, amounting roughly to £700,000, without issuing further capital. He hoped that when the market revived, and it became possible to realise some of their holdings at a fair profit, the directors would do so. Those holdings were all intrinsically sound, but the shareholders could not wait indefinitely for a return on their capital. He quite agreed with the previous speaker, who had urged that no fresh business in connection with companies in the development stage should be undertaken, because, in his opinion, they had already bitten off more than they could chew.

Mr. Fidler drew attention to the calls in arrear, amounting to £4,585, and asked if the greater part of them had since come in.

The Chairman, in reply, said that the options on shares would not expire until March 31 next, and when the time came to go into the question the board would deal with the matter with the greatest fairness to all concerned.

A shareholder asked when the board would come to a decision on the subject.

The Chairman's Reply.

The Chairman: Long before the options expire—in ample time. Continuing his reply, the Chairman said that the Trust took an underwriting interest in the Asahan and Kasintoe Companies and made a small profit. With regard to the remaining liability on the shares, it had been announced over and over again that their policy was to make the calls gradually, and their object in paying such a large bank interest had been to relieve the shareholders from any further calls as long as they possibly could. With regard to what Mr. Lock had said as to the investment policy of the board, he was perfectly certain that that policy was the right one. Shareholders should recognise the fact that some time must elapse before the properties in which they were interested were fully developed.

An Absolutely Sound Position.

If they wanted a good business they must build it up, and he had no hesitation whatever in saying that in regard to their holdings, they occupied an absolutely sound position, because the trend of all of them was upwards, and they were not of a speculative character. In spite of the depression in these war times, their holdings were steadily increasing in value, because there were a great number of investors who realised the intrinsic merits of the shares held by the Trust, and were quite willing to wait for the results which they would inevitably yield. In reply to Mr. Dean, there could not be any shadow of doubt as to the ability of the Trust to finance any of the business which they had undertaken. Mr. Michael had asked about the expenditure on the properties. It was difficult to state straight off the exact sum expended on the properties, but he would be pleased to give the information at the office. As to the calls in arrear, the amount at present outstanding was £2,100, and a large proportion of that was due either from aliens or from shareholders on this side who were serving their country in some shape or form. In the latter case the utmost consideration had been extended, and with regard to the aliens their shares would be forfeited if they did not pay up. With reference to their liability to advance sums aggregating £266,440, this obligation had been entered into during the past year, but shareholders would realise that if the Trust had a large interest in various companies and, under existing circumstances, those companies could not obtain the money they required, it would be the height of folly on the part of the Trust not to come behind them when they knew that those undertakings were perfectly sound. He did not agree with the suggestion that they had bitten off more than they could chew. They would chew what they had bitten off, and chew it very well, and in due

course the result would be excellent dividends. Of that he was confident.

The motion was then put and carried *nem. con.*

The retiring directors, Mr. C. A. Lampard and Mr. W. Megginson, were re-elected, as were also the auditors, Messrs. Ford, Rhodes and Ford.

Captain Evans proposed a vote of thanks to the Chairman and directors. He remarked that the directors had been passing through a very trying time, and he was sure they all hoped that Mr. Lampard's views as to the result would prove correct.

Mr. Palmer seconded the motion, which was unanimously adopted.

The Chairman briefly acknowledged the vote, and expressed the opinion that the profits of the Trust would increase from now onwards.

The proceedings then terminated.

LONDON-AMERICAN MARITIME TRADING CO., LTD.

THE annual general meeting was held on October 7 at the Great Eastern Hotel, Liverpool Street, the Earl of Wemyss (the Chairman of the Company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: This is the first annual meeting of the Company. Its trading has practically synchronised with the most terrible year in the world's history—a year in which this country has been engaged, and is still engaged, in a war so terrible in its nature, so costly in blood, so destructive of the capital of the country that no man alive dares to predict what may be its ultimate economic and financial result. I am sorry to say that two of our ships during the past year have fallen victims to the enemy. The *Rio Iguassu* was legitimately sunk by the German cruiser *Karlsruhe* and the *Rio Parana* was afterwards sunk by a torpedo in the Channel. I am glad to say that in both cases there was no loss of life. Of course, the loss was covered by insurance, but much valuable earning time was wasted during the period these two ships were being replaced.

Trading Profit.

Our Company, as regards six of its nine vessels, is under a time charter with the Rio de Janeiro Light and Power Company. Under this charter they are sure, no matter how low freights may be, of having continual and remunerative employment, but the system has its disadvantages. We cannot have it both ways, and while freights are high we cannot reap the full advantage of those high freights. Apart from this we have had considerable bad luck, because two of our unchartered ships met with accidents. One of them was laid up for five months and the other for four months at a time when they might have been reaping a golden harvest. If you refer to the balance sheet, gentlemen, you will find that the trading results show a profit of £130,588 0*s.* 7*d.* The directors propose to deal with this sum in the following way:—£4,123 14*s.* 5*d.* goes for various expenses, and £21,697 goes towards paying the interest on and the redemption of Debentures. On this latter item I should like to say one word. Many companies of this nature are handicapped and their earning possibilities chocked by the weight of Debentures round their necks. We have raised £200,000 of 5½% Debentures, towards the liquidation of which we agreed in the prospectus to pay £29,000 annually. We propose to have a reserve for contingencies of £25,000. I will come back to that item in a moment. Underwriting and other formation expenses are written off by £5,500, and £20,000 is put to a general reserve—making reserves of £45,000 altogether, leaving a balance of £54,267 [illegible].

Dividends.

The directors propose, with your approval, to deal with that amount in this way—the payment of the fixed dividend of 7% on the Cumulative shares will absorb £6,721 4*s.* 4*d.*, leaving £47,545 19*s.* 6*d.* available for further distribution. We propose, with your approval, to carry forward £2,545 19*s.* 6*d.*, leaving a balance of £45,000—exactly the same amount as we are putting to reserves—which we propose to divide in the following way:—A supplementary dividend at the rate of 4½%—under the prospectus the Preference shares are entitled to a first call of 10% on the divisible profits of the Company—which will absorb £4,500, and a dividend of 27½ on the Ordinary shares, which will amount to £40,500. I think you will agree with me that this is a fair arrangement, and it is also a satisfactory one. You will see that we subscribed £40,000 to the War Loan. In the balance sheet £6,000 is put down as paid, but since it was made up we have paid the whole of the balance. You will see on the other side a loan against security of £19,000, and the whole of that has been paid off. As regards bills payable in respect of the purchase of and secured on steamers not included in the Debenture trust, £37,250, the whole of that amount, I am glad to say, has been paid off, and the two steamers which were security for this loan have been included in the Debenture trust. I am glad to tell you this, gentlemen, that, whereas at the time of the prospectus our steamers aggregated 62,676 tons dead-weight, on July 31, with the same

THE STATE AND THRIFT

REBATE OF INCOME TAX ON LIFE ASSURANCE PREMIUMS

THE STATE has shown its approval of Life Assurance as a means to National Thrift by allowing a liberal rebate of Income Tax on Life Assurance Premiums. This concession applies equally to WHOLE-LIFE ASSURANCES and ENDOWMENT ASSURANCES (within certain limits) on the life of the taxpayer or his wife. No other mode of investing money offers similar advantages.

A SCOTTISH WIDOWS' FUND

Policy, besides entitling to rebate of Income Tax at the present high rates, enables the Policyholder at once to restore the capital value of his investments by small annual payments out of income.

SCOTTISH WIDOWS' FUND.

Manager & Actuary.

number of steamers, the dead weight tonnage was increased to 71,510—practically 9,000 tons more than we started with; and it is also a fact that, although the price of the ships has increased enormously, yet at the date of the balance sheet, comparing the cost of our fleet with the original cost in 1914, it practically comes out at the same price per ton dead-weight. Since that date we have made a most satisfactory sale of our oldest steamer, and that at a price which will reduce the book value of the remaining ships, reckoned per ton dead-weight, very considerably. I think, gentlemen, you will agree with me that this is a very satisfactory result indeed. I go so far as to say that I consider it a very remarkable result indeed, and I have less hesitation in saying this because, as Chairman of this Company, I wish to give credit where credit is due. I consider that the directors of a Company of this sort have great duties to perform. The whole responsibility for what happens is on them. It is their duty to dictate the policy, and it is their office to see everything and to approve of everything that is done; but I think that they are wise—a board of this kind—if, having a good manager, they leave to that manager the daily management of the details of the Company. I think that we have been indeed fortunate in the way in which Mr. Petersen—who, after all, is more interested in the finances of this Company than anyone else—has unremittingly and devotedly given his time to the work of your Company. Even at a time when that shadow of bereavement which threatens all our homes probably at the present moment darkened his home and extinguished the light of it he gave his time ungrudingly and unceasingly to the work of the Company, and I think it is to his resource, to his ability to seize an opportunity, to meet difficulties half-way, and, perhaps above all, to drive a very good bargain, that we find ourselves in our present splendid position.

Promising Outlook.

I think that the outlook for shipping generally must be prosperous. Tonnage has decreased, is decreasing, and during the War must go on decreasing. Then, even if the War ends more quickly than any of us can hope at the present moment, there will be an aftermath left which will take a lot of clearing away, and there will be a great deal for shipping to do. We do not know what burdens may be put upon the shipping industry. Whatever those burdens may be the shipping industry is prepared to shoulder them willingly and ungrudgingly as long as these burdens are fair and evenly distributed.

Mr. William Petersen seconded the resolution, which was carried unanimously.

The supplementary dividend on the Preference shares and the dividend on the Ordinary shares will be posted to the shareholders on the night of October 18, and the transfer books of the Company will be closed from October 13 to October 21.

THE NOBEL-DYNAMITE TRUST COMPANY, LIMITED.

(In Voluntary Liquidation.)

The Liquidators of the above Company GIVE NOTICE that, in accordance with the powers vested in them by Special Resolution of the Shareholders duly passed and confirmed at meetings held on 25th August, 1915, and 9th September, 1915, they have now concluded the Agreements then approved, and Shareholders should now surrender their Preference and Ordinary Shares of the Nobel-Dynamite Trust Company, Limited, to be exchanged for Shares of Nobel's Explosives Company, Limited, Glasgow, in terms of the circular of the 9th August, 1915.

Special forms of surrender are provided and will be sent direct to holders of Registered Ordinary Shares and Preference Shares. Holders of Share Warrants to Bearer can obtain the necessary form at the places hereunder mentioned.

The Company's Registered Office, 220 Winchester House, Old Broad Street, London, E.C.

The Union Bank of Scotland, Limited, London, Glasgow and Edinburgh.

The London City and Midland Bank, Limited (Metropolitan Bank Branch), Bennett's Hill, Birmingham.

The Belfast Banking Company, Limited, Belfast.

These surrender forms must be completed and delivered, together with the Share Certificates and or Share Warrants to Bearer (the latter with Talons and Coupons Nos. 31 to 37 attached), to one of the addresses above indicated.

In exchange for their present securities Shareholders will be handed Receipts, to be retained by them, pending the preparation of the Share Certificates of Nobel's Explosives Company, Limited, Glasgow. Due notice will be given when these Share Certificates are ready for issue.

H. J. MITCHELL, M. B. DICKIE, } Liquidators.

MONEY.

Thanks to the heavy maturities of Treasury bills, added to the effect of the Government dividend payments last week, the market has been very full of money, and only the loyalty of the bankers to their agreement not to lend below 4½% has kept the level of rates comparatively steady. An instalment on the War Loan was paid without producing the smallest apparent effect, and the problem of lenders has generally consisted in the difficulty of finding borrowers. This state of things, of course, is bound to be fairly constant under present circumstances, except during times when the Government is sitting on an immoderate amount of money. So much book-keeping credit has been created, through the Bank of England's enormous holding of securities, that the Money market can only be kept from a condition of saturated superfluity by the Government maintaining an exaggeratedly bloated balance.

When the Government has to pay out its quarterly dividends, or to meet a large number of maturing Treasury bills, and its exaggerated balance is thus diminished, straightway the market gets into a condition of flatulent ease, and there is at once a tendency to let discount rates drop. We have frequently pointed out that the maintenance of discount rates here will not suffice to maintain the American exchange, because our weight of purchases of American material is now so overwhelming that the only thing that can keep the exchange steady is heavy borrowing in America, or a reduction of our purchases in America, or an increase in our sales to America. Nevertheless, since firm discount rates assist one form of borrowing in America, they are a help towards one of the means by which the exchange can be steadied, as a state of things which makes it difficult to maintain them requires prompt correction. Even now there is still extreme ease, although the public deposits are over 70 millions. The ease is immediately due to the fact that the public deposits have come down to 70 millions from 177 millions, which they touched in July, but it is primarily due to the addition to credit caused by the great size of the Bank of England's holding of securities.

Cables from New York and hints in the City tend to confirm the view that something is being done to extend borrowing operations in America beyond the £100,000,000, divided between us and France, which has been achieved by the Loan Commission. This is very good news for several reasons. The Loan, by itself, would not have sufficed to steady exchange for long; and, moreover, if arrangements can be made, as reported, for some sort of commercial credit between the bankers of the two centres, in the first place we shall be enabled to draw on the enormous short loan fund now accumulated in New York, as well as the money of investors throughout the various States, and, in the second, this may be the beginning of a machinery for adjusting the exchange position between the two money markets without calling in the ponderous and portentously slow-moving steam-roller that has to be got to work whenever anything has to be done officially.

Of course, kite-flying in New York cannot meet all the requirements of the position; and, if it could, it would not be a sound method to employ beyond a certain point, since bills have a tiresome habit of falling due, and no one can be comfortable with too many of them outstanding. Nevertheless, it will be an enormous gain if London and New York can arrange to come together like two business centres, without any of the red tape and pomposities that are involved before the Government can be got to work. If such an arrangement could have been initiated some months ago, we should have been a richer nation to-day, and our credit would have stood considerably higher.

BANK OF ENGLAND.

The figures of the Bank return do not justify the weakness of discount rates which has been marked this week, for although the proportion of reserve to liabilities has risen to 27.16%, which is the highest figure since February last, the stock of bullion has fallen to £59,956,000, the Bank having lost nearly 8½ millions since September 1. Against a further export of £1,670,000 in gold for the week the moderate amount of £375,664 returned from internal circulation, and as there was a contraction of £316,000 in the note circulation, the reduction in the reserve was £978,000, and the total reserve now stands at £45,845,000, which compares with £54,558,000 on September 1. Besides losing on the reserve the market also had to find nearly 10 millions in connection with a reduction in the Bank's portfolio. These various demands upon bankers' balances were, however, almost entirely met by payments out of public deposits, which have run down another 10½ millions. Bankers' balances or "other" deposits are, therefore, only £395,000 lower at £97,907,000.

POSITION IN NEW YORK.

The loans of the New York Banks and Trust Companies have been advancing without a check since the end of July last. They were then £493,000,000, and an addition last week of more than 5¼ millions brought the total to the high figure of £560,976,000. This increase was accompanied by an addition of £4,970,000 to the deposits, which are within a touch of £597,000,000—also a high record. The reserve on the other hand is slightly lower. Money has remained extremely cheap at 1¾ to 2% for day-to-day loans, whilst the exchange upon London has not improved on the eve of the flotation of the Anglo-French loan which was to be offered for public subscription to-day (Friday). The transfer rate, which was 4.68⅞, and fell to 4.68⅛, has now recovered to 4.68¼.

The following rates of exchange are current in New York:—

New York on—			Rate Oct. 14	Par as usually quoted	Discount %
London	...	sight	$4 67¼	4 86½ dollars for £1	3 8
„ ...	...	cables	$4 68⅛		
„ ...	...	60 days	$4 65

Mexico	...	Mex. silver $	38½c. U.S.	50c. U.S. for 1 Mex. $	23·0

Rates for prime commercial paper and for call loans in New York are as follows:—

Oct. 14, 1915 ...	Prime paper ...	3-3½%	Call money ... 2%
Oct. 15, 1914 ...	„ „ ...	6-7%	„ „ ... 6-7%

POSITION IN INDIA.

There was a much better demand for exchange upon India at Wednesday's allotment of India Council drafts, for whereas 50 lacs were again offered the applications reached nearly 304 lacs, as compared with 287½ lacs in the previous week. This increase was chiefly due, however, to larger applications at an unacceptable figure, with the result that the allotment was only made at the same rate as a week ago, and applicants got a bigger percentage. Doubtless owing to this the Council have decided to reduce the amount next week to 40 lacs. The last return of the Indian Currency Department shows a contraction of 85 lacs in the note

circulation, which has fallen to 6,295 lacs. This contraction has been offset by a reduction of a similar amount in the silver reserve, which has fallen to 3,689 lacs. The stock of gold in India and in London are both unchanged.

The following are the minimum Rates of Discount current in India:—

Bombay ... 5 per cent. (June 2, '15) | Bengal ... 6 per cent. (Sept. 24, '15

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, October 13, are:—

				Imm. 2,74,000	1/4.031	1/4 1/16
Madras ...	63,000	1/4	1/4	—	—	—

From April 1 to October 12 inclusive the Council granted remittances for Rs. 5,87,95,297, realising £3,918,759. Up to October 13 of last financial year the total Bills and Transfers sold was Rs. 5,74,55,861 realising £3,831,653. The total sales for the week ended October 12 amounted to Rs.50,10,000, realising £334,165. The amount to be offered for tender next Wednesday will be reduced to 40 lacs.

SILVER.

Bar silver, which last week rose 1/16d. to 23 15/16d., has further advanced to 24d. The continued strength of the market seems to be due more to European coinage orders than to any Eastern demand.

Stock Exchange.

The principal feature in the general stock markets this week has been the improved tone of some descriptions of foreign railways, including more particularly those of Argentine and Mexico. Mexican bonds have also been inquired for. Apparently this revived interest in things Mexican appears to be due to the growing impression that the United States Government will officially recognise the Carranza party. The behaviour of the American markets has been extraordinary and phenomenal rises in prices have occurred, more particularly in industrial shares, which have been on the upward grade for some while past. American Railway securities have also distinctly improved, nor is this to be wondered at having regard to the expansion of trade, and the outlook of the railways having to move a greater quantity of goods and grain than probably ever before. Not only have the Americans been investing in the quite new form to them of foreign Government issues, but also in their home industrial and railway issues. The ability of English holders to dispose of American securities to willing buyers is an economical help to this country.

CUBA RAILROAD.

Although it is the slack season in Cuba, the earnings of the Cuba Railroad Company are remarkably big, and it is evident that the trade of the island continues exceedingly active. In July the gross earnings amounted to $420,000 or $37,000 larger than in July of last year, and the net profit at $138,000 showed an improvement of $46,000, or 51%. The August results were even more satisfactory, for with an increase in gross receipts of $73,000, the gain in profit comes out at $64,000 or over 100%. For the two months, therefore, the Company has added no less than $110,700 to its gross traffic results, an improvement equal to 15.2% compared with a year ago, which in turn were $40,000 larger than in the first two months of 1913-14. Despite the larger traffic handled, moreover, the Company has been able to save some $3,700 in working expenses, so that the net increase for the period amounts to $114,400, or 39%. On the other hand interest charges have absorbed $3,700 more than a year ago, and the gain in profit comes out at $110,700, or 72.7%. The income statement of the Company for the first two months of the current year is appended:—

	2 months to Aug. 31		Increase or Decrease	
	1915	1914		
	$	$	$	%
Gross earnings	836,724	726,031	+110,692	+15·2
Working expenses	429,244	433,001	— 3,757	— 0·9
Ratio	(51·30)	(59·64)	—(8·34)	—
Net earnings	407,480	293,030	+114,450	+39·0
Fixed charges	144,282	140,571	+ 3,711	+ 2·6
Net profit	263,198	152,459	+110,739	+72·7

We dealt fully with the position of the Company in our issue of September 18, and there showed that in the twelve months to June last the profit for dividend amounted to $1,275,000, a sum equal to 12¾% on the Common stock. As this was after making liberal allowances for betterments, the real profit earning capacity of the road was equal to a still higher dividend on the Common. The excellent result achieved so far in the current year makes the position even more assured, and as the outlook for the coming sugar crop is very satisfactory the growth in earnings and profits for the complete twelve months should be large. There is no public interest in the Common stock, which is all held by the Cuba Company, but the 6% Preferred stock, now quoted at about 94, is an excellent investment, affording a yield of nearly £6¾. To show the margin of profit behind the issue at the present time and the rapid improvement in the earning capacity of the road in the last few years, we give the following statement:—

Cuba Railroad.

Year	Net Profit	Extraordinary Replacements Charged to Expenses	Total Profit	Dividends Earned On Preferred Stock Rate	Dividends Earned On Preferred Stock Amount	Dividends Earned On Common Stock Rate	Dividends Earned On Common Stock Amount	Divs. Paid Pref.	Divs. Paid Com.

Mining Topics.

The War and political events of the week have had but a slight adverse effect upon the Rand mining department, and no appreciable changes in prices have occurred, but where movements have taken place they have been to somewhat lower prices. A certain amount of profit-taking apparently has been resorted to in the shares of companies operating in the Far Eastern Rand. On the favourable side there is the improvement in diamond shares, also in Mexican mining issues, to which we call attention, and the strength of the American group of copper shares. As to Mexican issues, the inquiry fidget is due to belief that the Carranzista party will be officially recognised by the United States Government. The American copper group is influenced by improving dividend distributions. Added to the idea of the Anaconda absorbing the Miami and Inspiration Companies, there is an impression that the Utah Copper Company will also be absorbed.

The recent mild recovery that has occurred in diamond shares, and more particularly De Beers, is in the main due to the prosperity of the United States, always in times of good trade a big buyer of diamonds. The idea that the De Beers Company will materially benefit from entering into war contracts is quite a third-rate consideration.

Rand Profits.—The following is a contrast of the profit results of those Rand companies which have issued their returns since we went to Press last week:—

	Sept. £	Aug. £	July £	June £
Knights Deep	15 232	12 735	14,081	16,023
Langlaagte Estate ...	13 626	13,281	12,803	13,668

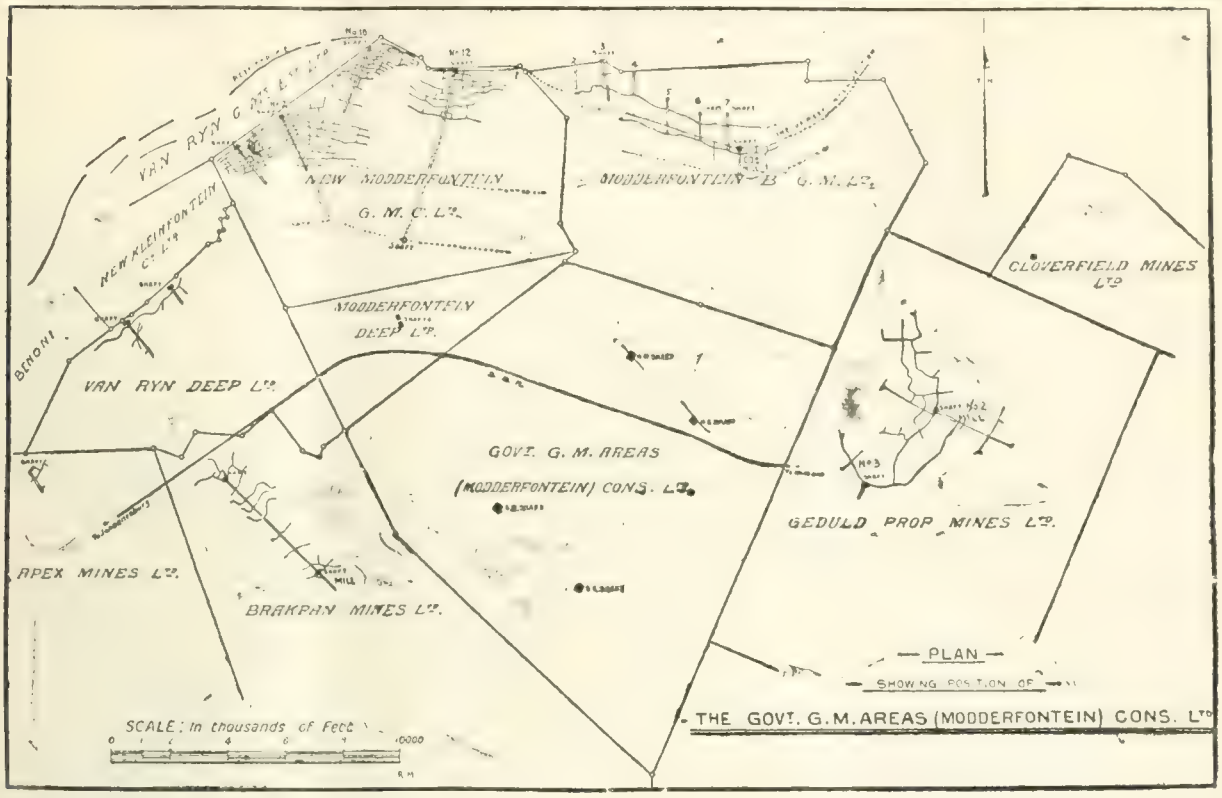
Village Main Reef ...	25,668	26,009	24,097	23,347

MODDERFONTEIN DEEP.

We dealt generally in our issues of August 28, September 4, and September 11 with Eastern Rand propositions, while on September 18 and 25, also October 2, we considered the affairs of the New Modderfontein. On October 2 and 9 we dealt with the Modderfontein B; also the Geduld's extension policy was briefly dealt with on October 9. This week we propose to discuss the affairs of Modderfontein Deep.

As far back as April 1899 area immediately to the south of the New Modderfontein was taken up by the Modderfontein Deep Levels, Limited. Not till after the end of the Boer war was the step taken of sinking bores to ascertain the location of the reef, but in 1902 by means of two bores this was done. Then there was another period of quiescence, during which there was acquired some small additional area in the acute apex to the east of the triangular property, making the present mine area 377½ claims. The position of these claims will be noted from the plan that accompanies these remarks. In 1910 provision of capital was made and further capital subsequently issued, so that at the present time the issued capital of the Company is £500,000, a final issue of 45,000 £1 shares having been made in November 1914 at the price of 35*s.* per share. In respect of the nominal £500,000 of capital it has to be borne in mind that the Company issued 88,000 shares for the purchase of areas and 412,000 shares for working capital. Beyond the par of £412,000 all but 10.000 shares were placed at premiums aggregating £347,375, and we understand that at the present time the Company has cash resources in hand. There is no floating debt.



Early in 1910 shaft-sinking was started, and by August 1912 a first shaft intersected reef with satisfactory showings. The erection of a reduction plant was decided upon and quickly consummated, a start of crushing being made December 1904, or about a year from the time erection was commenced. Initially the plant was of 60 stamps and six tube mills. Though designed to deal with 30,000 tons a month, the capacity of the plant has proved to be greater—34,500 tons being milled in July and again in the 30-day month of September.

By the time the mill was ready to start the Company had effected developments that gave it very near to 2,500,000 tons of blocked-out ore reserves, based upon a stoping width of 69 inches, and showing a gross assay value of 34*s.* per ton over such width. The assay value is arrived at after reduction of ore of exceptionally rich showings, and while we take note of such reductions, we may further say that the assay value must not be interpreted to mean the extractable value. Owing, however, to improvements in developments that have been going on, and also as an outcome of sorting effected both below and above ground, we witness the fact that the actual extraction yield of gold per ton crushed has in the past quarter averaged 36*s.* 7*d.* per ton.

We have mentioned that when the first shaft intersected reef the showings were satisfactory, but the developments effected as extensions of driving have been made have proved even more satisfactory. It will be interesting to set out the showings of the past nine quarters, and these are given in the table below:—

	Sampled Feet	Value	Width Inches	Shilling-Inches
1914.				
Mar. qr.	3,345	39 6	48.3	1,908
June qr.	4,980	46 9		2,037
Sept. qr.	2,395	41 8		2,109
Dec. qr.		Not issued		
1915.				
Mar. qr.	180	43 9	53.5	2,330
June qr.	865	57 9	49.4	2,847
Sept. qr.	1,130	60 9	44	2,673

The ore reserves at December 31, 1914, were 2,450,000 tons—these were fully developed reserves, but besides the blocked-out ground that gave such figures a considerable amount of driving had also been

effected but did not block out ground. It looks as if the new developments that have been effected must have fully opened up further ore reserves more than equalling the quantity of ore that has been used since the start of milling, and private advices report discovery of a further leader close to the "roof" of the ore body at first developed on. If this advice is accurate and a leader is found to continue it may add to life.

The nature of the reef formation in this property is quite different to what it is in the New Modderfontein ground. The reef width of the New Modderfontein in recent months has averaged 12 inches, and of very good grade indeed over this thickness. The reef in depth at the Modderfontein Deep alternates with partings of country rock—analogous to the lean and fat layers in "streaky bacon"—and the actual development work shows that the true reef strata vary as to the aggregate as indicated in above development showings. The stoping width adopted at the Modderfontein Deep is 69 inches, comparing with 63 inches at the outcrop New Modderfontein mine. Really, however, the ore at the Modderfontein Deep mine is more valuable than that of the New Modderfontein, in consequence of the considerably larger aggregate thickness of the reef. Thus the June quarterly development statement of the New Modderfontein showed over a stoping width of 63 inches a gross assay value of 33*s.* 5*d.*, while the Modderfontein Deep for the September quarter showed over 69 inches stoping width a gross assay value of 38*s.* 8*d.* It may be noted incidentally that the fact of the Modderfontein Deep having an aggregate wider reef than the New Modderfontein augurs well for the nature of the ground further in depth in the New Modderfontein's property.

In dealing with the New Modderfontein recently, we pointed out that its property was proved all round from outcrop—east, west, and south. With the Modderfontein Deep we have the fact that besides property to the north, property to the south—the Brakpan—has also proved continuity of good reef. We may now set out the progress of the Company since milling commenced.

Modder Deep. — Capital £500,000, in £1 shares. Sixty-stamp mill—six tubes—started December 14, 1914. Capacity of plant at present about 35,000 tons monthly. Arrangements made to increase to total of 40,000 tons monthly. Sorting both below ground and on surface. In table below only the above-ground sorting percentage is given.

Year ends Dec 31 1915.	Stps.	Tons Milled	Sorting %	Revenue Amt. £	Revenue Per ton	Expenses Amt. £	Expenses Per ton	Profit* Amt. £	Profit* Per ton	Price end of Period
Mar. qr.	60	86,050	8	125,769	29/3	79,191	18/5	46,578	10/10	3⅛

* Profits include sundry revenue.

Dividends—1915, June, 10 per cent.

For the first few months after start of milling a considerable absorption of gold occurs with new plant, but with the Modderfontein Deep's plant this absorption is now over and done with as to the plant in operation. It will be noted how gradually the real stride of the mine was got into. For the first three months of 1915 the profit made was only 10*s.* 10*d.* per ton—this being due to the absorption—and to a less extent the June quarter was similarly affected, the profit being 17*s.* 10*d.* per ton, but in the September quarter the profit slightly exceeded a pound per ton.

The remarkably satisfactory aspect that this mine has presented during its short history as a producer led very quickly to the decision on the part of the directors to increase the capacity of the plant. In July last the announcement was made that the plant was to be extended to a capacity of 40,000 tons a month, it being estimated that the cost of providing the additional plant would amount to some £23,000, and it is expected that it will be ready for operation in the middle of 1916. We have pointed out how the capacity of 30,000 tons initially aimed at has been more than attained, and with the data of nine months' results for this year we can formulate an estimate of what may be very near to the actual results secured for the whole of 1915. In the estimates we give below we set out what may be about the showing of 1915, and then what may be an approximate result for 1916, based on similar results for the June half of 1916 as for the December half of 1915, and assuming that 240,000 tons are dealt with in the December half of 1916 at a profit of 20*s.* per ton. We show what may be the rate of profit on the capital in both years. We go still further and give an estimate for 1917 based on a gross profit of 20*s.* per ton in respect of 480,000

tons, making a liberal allowance for taxes, &c. We summarise these by saying that on the capital of £500,000, 1915 may show a total net profit equal to about 56%, 1916 to about 79%, and 1917 to about 83%. It will be noted that in the figures of the 1915 estimate we wipe out entirely the £23,000 capital cost that may be provided out of profit..

		£
1915.	Profit, actual, June half	153,005
	" " September quarter	104,284
	" Estimated, December quarter	104,711
		362,000
Appropriations		
	Taxes, &c., say £10,000	
	Cost, new plant 23,000	63,000
	Clean profit	279,000

Equal per cent. on £500,000 capital, *55·8 per cent.

* Of this a 10 per cent. dividend paid for June half.

1916.	Profit: first half, say as for December half, 1915	203,000
	" second half, 240,000 tons at 20s. per ton	240,000
		449,000
	Taxes, &c., say	55,000
	Clean profit	394,000

Equal per cent. on £500,000 capital, 78·8%.

1917.	Profit, say, 480,000 tons at 20s. per ton	480,000
	Taxes, &c., say	65,000
	Clean profit	415,000

Equal per cent. on £500,000 capital, 83%.

The next important point to be considered is the question of life. Here we have a property of comparatively small size, which is surrounded by proved reef-bearing ground, and the developments so far are unaccompanied by any important dyke, though here and there faults have been encountered. In recent calculations as to the life we have assumed—adopting a cautious attitude—an allowance of 15% for faults; but it now appears reasonable to reduce this allowance to 10% only, as more proof has been afforded as to the nature of the ore deposits. Hence we may take it that, deducting 10% from the total 377½ claims owned, the net pay area is 340 claims. With a dip of 11 degrees and, say, 69 inches adopted for a stoping width, the gross quantity works out at some 31,000 tons per claim, and, after deduction of 10% allowance for packing underground and surface sorting, we put the net mill tons per claim at 28,000 tons. Applying such mill tons quantity to the net area, we have the following:—

	Mill Tons
340 claims × 28,000 mill tons per claim ... ... =	9,520,000

Such quantity on the use of 480,000 tons per annum would equal about 20 years' life.

In assuming a valuation of the Company's shares there are points to be borne in mind. We have witnessed that a plant designed to deal with 30,000 tons a month has been able to deal with near to 35,000 tons, and if when the designed plant for 40,000 tons is completed there should be excess over that quantity it may mean some slight reduction in the life, accompanied by the benefit of increasing dividends. Without going into intricacies, we may for valuation purposes assume an average rate of 80% dividend for 20 years, 85% for 19 years, and 90% for 18 years. We set out what this would make the present value of the share, on the investor desiring to have an income of 10% and applying excess of dividend he receives to a sinking-fund by investing the excess at 5% for the redemption of his capital at the end of the life. The value upon the different bases varies as under:—

Assumed Life Years	Average Dividend on £500,000	Present Value of £1 Share
20	80%	6½
19	85%	6¾
18	90%	6¾

Heretofore, in making valuations, we have assumed accumulation to be invested for sinking fund at 4% only. We raise the rate to 5%, as conditions are changed.

NEW GEDULD DEEP.

A LITTLE over 13 years ago we emphatically protested against the methods adopted by the promoters of the old Geduld Deep, Limited, in introducing shares on the market at a price of about 2½ in respect of an issued capital of 245,000 £1 shares.

In 1908 a return of 8*s.* 6*d.* per £1 share and reconstruction was effected, the capital of the New Geduld Deep being made £30,000 in 300,000 shares of 2*s.* each. All the 300,000 shares are in issue, as beyond about 245,000 shares credited as fully paid which were passed to old shareholders, approximately 55,000 shares were taken up for cash in 1909 at the price of 5*s.* each.

The position of the New Geduld Deep property is in Geduld farm, immediately south of the Geduld mynpacht and close to the north of the Springs Mines. In its freehold of 200 morgen the Company has a mynpacht of 172.4 mining claims. The rest of the 200 morgen of area was divided up into stands. Of the initial 935 stands 318 have been sold—an aggregate of 28 stands sold in 1913 and 1914 secured £2,252, or an average of about £80 per stand. This left at December 31, 1914, 617 stands unsold .

On the inception of the old Company it could not possibly have been felt that profitable results could be secured with 172 claims only. The cost of shaft sinking and development work would have been wasted on so small a property. If, as expected, the Springs Mines turns out to be a profitable proposition, there is the outlook that the Government will initiate lease conditions in respect of area to the north of the Springs property, inclusive of the property of the New Geduld Deep and "The Springs" triangular ground which belongs to the Government.

Turning to the balance sheet of the Company as at December 31, 1914, we find the Company possesses 172.4 mynpacht mining claims, 617 township stands, and some cash. The position may be summarised as under:—

	£	Approximate Value per Share s.
172 mynpacht claims at £100 per claim ... ... (The £300,000 of the Springs capital that was paid for 1,332 claims at par equals £225, and at market price at £280 per claim)	17,200	1.15
617 stands at £30 per stand	18,510	1.23
Cash	22,000	1.52
	57,750	3.90

This bed-rock valuation of £100 only per claim and £30 per stand can be altered according to individual ideas of what values may be when a comprehensive scheme for working is arrived at.

The present price of the shares in the market is about 2*s.* 6*d.* The Company out of its income paid a dividend of 3*d.* per share in April last.

Particulars of the Company in M.O.A. form are set out below:—

NEW GEDULD DEEP, LIMITED.

(*Registered, S.A., September* 21, 1908.)

The Geduld Deep was wound up voluntarily in August, 1908, and the above property acquired by the New Geduld Deep.

Johannesburg Office—63-4 STOCK EXCHANGE BUILDING. J. S. RICHARDSON, *Secretary.*

Office—5 LONDON WALL BUILDINGS. C. W. MOORE, *Secretary.*

Directors—J. T. WILLIAMS (*Chairman*), E. MANSFIELD (alternate H. SOUTHCOTT), D. SIMPSON (alternate H. HARGREAVES), J. O. REID (alternate R. MATHIESON), A. W. SPEYER.

London Committee—B. HANSFORD, D. E. HIGHAM, R. S. ALLEN.

Accounts—December 31. **Meeting**—(Johannesburg) April 30, 1915.

At December 31, 1914, the Company had about £22,000 cash resources.

Capital—£30,000 in 300,000 shares of 2*s.* each; all issued 245,025 shares were credited (except 25) as fully paid to shareholders of Geduld Deep, Limited, *pro rata* to their holdings.

During 1909 the Company sold its 54,975 reserve shares at 5*s.* per share.

Consolidated Mines Selection Company interested.

Transfer—Common form; fee, 2*s.* 6*d.* per deed.

Dividends April, 1915. 3*d.* per share equals £3,750.

Property - Freehold of 200 morgen (172.4 claims have been granted mining rights) on the southern portion of the farm Geduld (see Map 6), and 935 stands (50 × 100 ft. and 50 × 50 ft.) forming the remainder of the 200 morgen which were not obtained as mining claims. Of such "stand" area 318 have been sold (28 in 1913 and 1914 for £2,252) leaving at December 31, 1914, 617 stands unsold. This portion (200 morgen) of farm Geduld was retained by the President of the late Transvaal Republic at the time he sold the rest of the farm to Messrs. A. Goerz and Company. He afterwards disposed of the present Geduld Deep area to the Springs (Transvaal) Real Estate Company, Limited by whom it was sold to the initial Geduld Deep Co.

It has been anticipated that the reef come upon in the property of the Geduld Proprietary Mines, Limited, will be intersected in the centre of the area of the Geduld Deep at a depth of about 2,800 to 3,000 feet. In the Springs Mines, Limited, north shaft the reef was met with at 3,438 feet depth. The property is considered too small to equip, and probably some scheme of fusion of area with Government ground may be arrived at.

MAIN REEF WEST.

This Company in its early days did not have a pleasant outlook, but then there was disclosed a run of distinctly good ore which brought the Company in a very large amount of profit in the years ended June 30, 1910 and 1911. Thereafter, however, profits fell off, and there was much unpayable development work and new finds of good ore were wanting. Latest developments are not encouraging, as the crosscuts into ore at the lowest or 15th level are reported as "disappointing." As year by year results have passed from bad to worse, we have a sad contrast of profit per ton and dividends in each year to June 30 to set out as below:—

	1915	1914	1913	1912	1911	1910	1909
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*
Profit per ton ...	3 9	5 4	7 10	11 3	11 3	11 6	8 10
Dividends % ...	nil	nil	nil	12½	17½	25	(1st)12½

In 1909 an issue of £300,000 6% First Mortgage Debentures was made to provide for equipping the mine with reduction plant, &c., and these were to be redeemable by annual drawings of £25,000 or by purchase in the open market, with a first drawing October 1, 1913. This rate of redemption was effected, and again in 1914, but the directors in September this year secured powers to suspend for three years the redemption or purchase of £25,000 annually of Debentures. It should be mentioned that the capital in issue is £491,888. A contrast of operations and appropriations of each of the last two years is set out below:—

Year ended June 30		1915 £	1915 Per Ton		1914 £	1914 Per Ton
Gross revenue ...	(269,520 tons)	318,711	23/8	(212,972 tons)	308,284	28/5
Expenses ...		267,858	19/11		246,470	23/1
Mine profit		50,856	3/9		62,514	5/4
Surplus net receipts		2,367			5,661	
		53,245			68,175	
Taxes ...	3,518			6,708		
Deb. redemption	25,000			25,000		
,, interest, &c.	15,138			16,442		
Pit-lass, &c.	4,390			4,714		
Cap. expenditure	3,585			10,611		
Sundries ...	315			547		
		51,946			64,022	
Surplus		1,297			4,153	
Balance brought forward		23,414			19,261	
Balance carried forward		24,711			23,414	

The taxes provided in above appropriations were in respect of the year previous, and the 1914–15 Government Unrated War tax have not yet been paid.

The pay-ore reserves at June 30, 1915, were returned as 416,280 tons, of an average assay value of about 24*s.* 9*d.* per ton over a stoping width of 51 inches. During the year the Company milled 269,520 tons, but the developments, in consequence of the shortage of labour, were so backward that the ore reserves were trenched upon to the extent of some 110,000 tons. It will be noted from the appropriations set out above that some small amount has been applied to capital purposes, and the postponement of the obligation to annually retire £25,000 of Debentures will strengthen the Company's cash resources. It is imperative to proceed with the sinking of two secondary incline shafts in the furthest underground workings.

CONSOLIDATED MAIN REEF.

A few years ago two large Rand mining areas of farm Paardekraal had not made any great mark, but the Consolidated Main Reef, the earlier worked Company, was an unsuccessful one, while the Main Reef West, with its deep-level ground, was for a time a successful undertaking. At present we have the feature of the Main Reef West mine showing a falling-off—and an appreciable falling-off at that—in its results, while the Consolidated Main Reef, or the eastern ground, is in depth yielding better results than heretofore have been secured from the upper workings.

With the Consolidated Main Reef "mine" there has happened as often on the Rand—the occurrence of a big dyke intrusion, with a strike from east to west. This occurrence of dyke has necessitated a layout of the deep-level ground as if it were quite a separate mine from the outcrop. Virtually the part north of the dyke area is worked out as to its good-grade reef. In the area south of the dyke a large-pattern vertical shaft was sunk, and the operations from such shaft now yield the ore that is treated at the mill. In the western driving from the central main shaft the showings are not so good as could be desired, but in the eastern drive they are decidedly richer than at the west.

Immediately to the east of the Consolidated Company's ground there lies the property of the Consolidated Langlaagte—a successful enterprise. For the year to June 30, 1915, in contrast with the year previous, the Company, through its ability to secure an adequate supply of labour, obtained better results than in the previous year, and in place of the 5% dividends declared for the two half-years to June 30, 1914, was able to pay 6¼% in December last and again in June this year. A contrast of results is detailed in the following tabular statement:—

Consolidated Main Reef.—£924,364, in £1 shares. 120 stamps; three tube mills.

Year ends June 30	Tons Stps.	Milled	Sorting %	Revenue Amt. £	Revenue Per ton	Expenses Amt. £	Expenses Per ton	Profit Amt. £	Profit Per ton	Price end of Period
1913-14...96	av.	241,016	12	379 543	31/6	262,942	21/10	116,601	9/8	..;
1914-15 95½	av.	294,760	12½	442,649	30/0	304,384	20/7	138,265	9/5	19/0
1915–16.										
July ...110		28,110	13	39,842	28/4	27,520	19/7	12,322	8/9	18/9
Aug. ... —		28,180	—	39,532	28/2	27,514	19/6	12,018	8/6	19/0
Sept ... —		23,090	—	41,123	29/3	27,576	19/8	13,547	9/7	19/9

Dividends—1914, June, 5; Dec., 6¼ per cent.
1915, June, 6¼ per cent.

In the Consulting Engineer's statement accompanying the report he winds up by saying:—

"Given a continuance of the present labour supply the rate of profit earned during the past year should be maintained during the ensuing year."

The amount of work that is being done with the increased labour is much greater so far this year compared with the corresponding period. Showings for the six quarters to June 30 last are set out in the table of developments below:—

	Feet on Reef	Payable Length Feet	Payable Aver. Value*	Unpayable Length Feet	Unpayable Aver. Value*
1914.					
Mar. qr. ...	1,911	1,196	44/7	686	14/10
June qr. ...	2,872	1,758	36/6	1,014½	13/7
Sept. qr. ...	3,042	1,622	39/8	1,420	16/7
Dec. qr. ...	3,344½	1,840⅛	45/0	1,504	16/1
1915.					
Mar. qr. ...	2,982⅛	2,162½	33/7	770	12/9
June qr. ...	3,803	2,935½	42/6	867½	13/2

* Based on 48 inches width.

The ore reserves were in the last year increased as to quantity, and, to a slight extent, there was a gain in grade, the contrast being as under:—

	1915 Tons	1915 Value	1914 Tons	1914 Value
South Reef... ...	46,050	23/9	52,200	22/6
Main Reef Leader ...	809,550	32/4	641,260	31/10
	855,600	31/11	693,460	31/2

There are three reefs: the Main Reef, scarcely touched, not more than 2% being mined; the South Reef, which is poor and patchy, approximately 22% of which is mined; and the Main Reef Leader, which is the reef chiefly relied upon, there being used last year 76% of this ore.

In 1909, after the ascertainment of the existence of dyke, it was officially computed that there remained 800 claims intact. After allowing for the quantity milled since to June 30, 1915, on an estimate of 22,500 mill tons per claim we arrive at a remaining 16,454,000 tons. The mill in full operation can deal with some 300,000 tons per annum—really probably more, as 103⅓ stamps were in operation in the last twelve months, out of 120 stamps, and dealt with just 295,000 tons. On 300,000 tons milled annually the remaining life of the mine works out at equal to 55 years. There is much uncertainty respecting the unexplored region to the south, but even were a third of the area deducted as unpayable there would still be a long life.

The present price of the shares is about 19*s.* 3*d.*

NORTH ANANTAPUR.

In The Statist of February 6, 1915, we called attention to the £1 Preference shares of this Indian gold mine, then quoted about 30*s.*, since when they have risen appreciably in price. The annual report just issued discloses a marked increase in the profit. During the year ended June 30, 1915, a somewhat smaller quantity of ore was dealt with, owing to the suspension of operations for one month for the purpose of changing over from the old to the new plant. However, there was a very appreciable rise in the gold yield, and, despite higher working costs, due to the smaller tonnage milled, the net result for the year was a working profit of £24,643, in comparison with only £11,519 in the previous twelve months.

The marked progress in prosperity of the undertaking is shown in the following table; and in reference to the much smaller yield of gold obtained in the three months of the current year, it should be noted that this is explained in the Superintendent's report as being due to alteration in the method of stoping the ore, which apparently caused a higher grade of ore than the average to be dealt with in the year 1914-15. However, the increased tonnage now being dealt with, and probable consequent lower working costs, should partially offset the reduced gold yield.

Year ends June 30	Ore Milled	Gold Yield Per Ton	Total Working Costs Per Ton	Working Profit	Per Ton
	Tons	*s.* *d.*	*s.* *d.*	£	*s.* *d.*
1913*	22,826	31 5	26 2	5,859	5 3

Sept.	2,600	38 2	—	—	-

* Tailings untreated until December 1912.
† Including sundry revenue and after deduction of Government royalty.

A comparison of the profits and allocation of the last two years is given below:—

Year to June 30—	1913	1914
	£	£
Working profit	24,643	11,933
Sundry revenue	55	
Amount brought forward	732	629
Total available	25,430	12,562
Allocations—		
Income tax and sundries	1,023	337
Amounts written off...	13,082	5,158
Preference dividend	6,250	*
	(25%)	(22½%)
Ordinary dividend	3,813	*
	(5%)	(2½%)
Carried forward	1,262	731
	25,430	12,562
Surplus liquid assets	16,414	8,755
Preference capital	25,000	25,000
Ordinary capital	76,253	74,248

* The combined dividends absorbed £6,335.

Of the working profit of £24,643 for the year to June 30, 1915, no less than £13,082 was applied to depreciation of plant and other writings off. Dividends aggregating 25% on the Preference shares and 5% on the Ordinary were paid, calling for only £10,063, and a larger balance is carried forward. This conservative distribution of profit has had the effect of greatly strengthening the Company's financial position, and the surplus liquid assets at June 30, 1915, after allowing for payment of the final dividends, amounted to £16,414.

As regards the underground position, the Superintendent reports that the ore reserves at the end of June amounted to 54,000 tons, showing an increase of 2,000 tons for the year, despite the milling of 22,860 tons. The value of the ore reserves is not stated. The development work done at the 750-foot, or second lowest level of the mine, gave satisfactory results during the year, although not as favourable as at the 650-foot level, the average width of the ore body being less. On the other hand, the tendency of the ore body to lengthen northwards is of importance. At the 850-foot level, since the date of the Superintendent's report 5 feet of quartz has been intersected assaying 11 dwt. Driving at this level will be watched with interest.

The Preference £1 shares, which are entitled to a non-cumulative annual dividend of 20%, and thereafter beyond to rank with the Ordinary, are now quoted at 34*s.*, at which price, on continuance of 25% dividends, they would afford a yield of about 15%. The profit earned last financial year, but for the liberal writings-off, would have sufficed to pay 35% on the Preference and 15% on the Ordinary shares of the Company. It must be noted, however, that the ore reserve position is none too strong. The Ordinary shares, of course, are much more speculative than the Preference.

Burma Corporation.—Cabled advice reports that the internal shaft sunk from the 171-foot level has again been in pay ore, the values from 431 feet to 436 feet depth being 8½ oz. silver, 10% lead, and 13% zinc over 72 inches. This point is the deepest in the mine, being over 600 feet vertical from surface, and, moreover, as ore has not been exposed in the internal shaft since 366 feet depth below 171-foot level, its reappearance seems to point to renewed widening of the ore body.

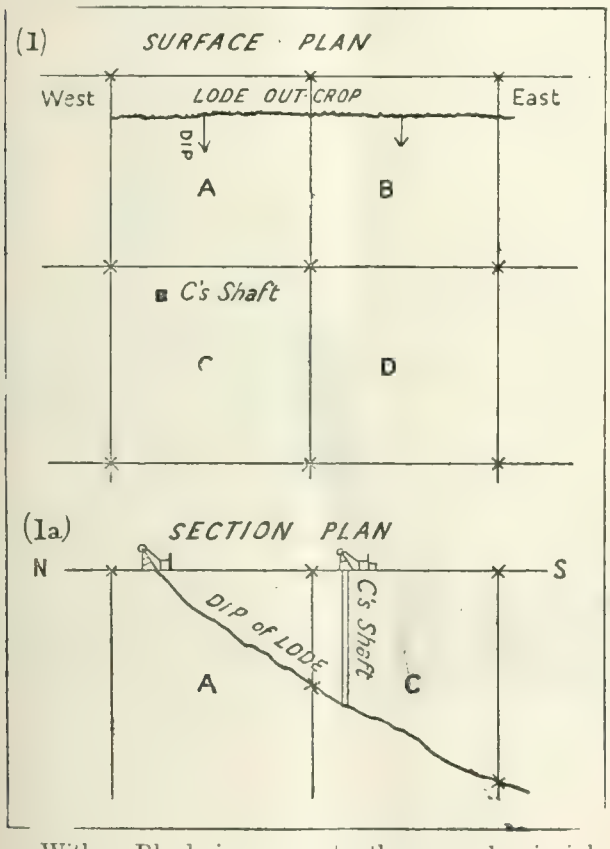
MINING RIGHTS AND SURFACE RIGHTS

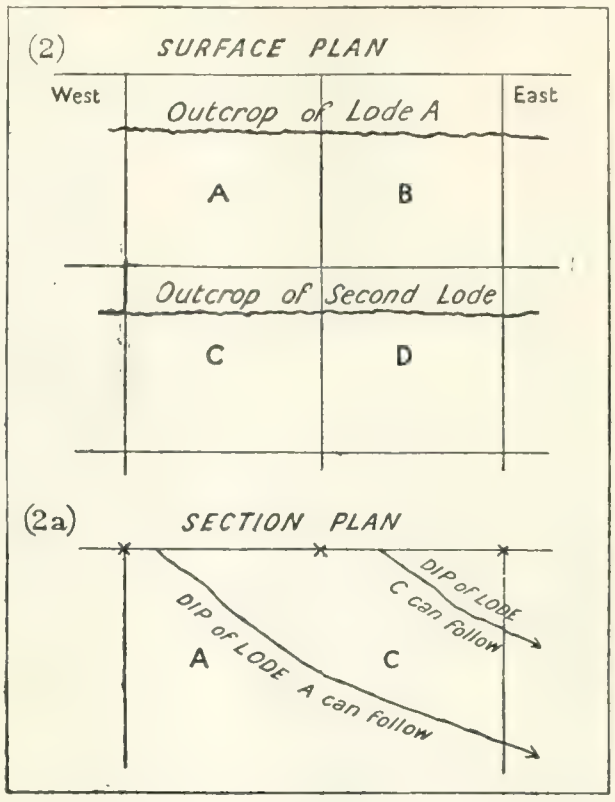
RAND AND RHODESIA.

An interesting conversation entered into by parties during a railway journey too short to terminate a discussion of the bearings of laws as to mining areas, though it became evident that some of the party were interested as shareholders in a forthcoming legal decision, showed there is a remarkable lack of knowledge about mining regulations in different countries.



In some countries the area both as to surface and mining rights—as, for instance, the Witwatersrand—is identical. The owner of a Rand property cannot, on the surface, put up plant or in any way encroach on neighbouring properties, nor can he in mining underground go beyond the vertical line of his frontier. In the United States and Rhodesia, not to go farther afield for other instances, the law is such that while the owner of a property is limited as to what he can do in erecting buildings, &c., on the surface, and cannot go outside his boundaries, underground, if he finds the lode that has been discovered to outcrop on his property extends on the dip, he can by the regulations follow such lode indefinitely, though the lode

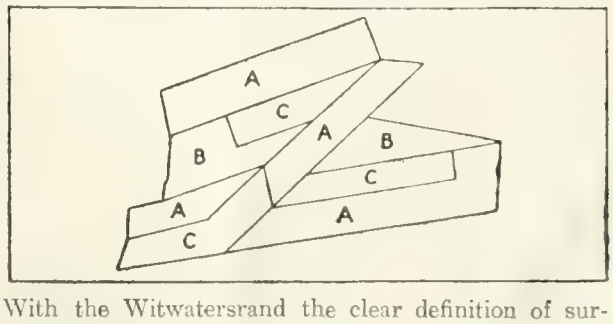
continues under areas the surface rights of which belong to other persons.



On broad lines, and without going into technical legal variations that may occur through the wordings of agreements, it may be of use in order to understand the matter if we describe variations in regulations and add explanations in diagram form.

In diagram (1) we take the very simple proposition of a Witwatersrand mine. In the Union of South Africa there is a defined area, both as to surface and mining rights below the surface. The four rectangular properties in the diagram (1) have their areas defined by a small cross at each corner. Of course, if the property is of irregular shape there may be several corners. This is very simple, so far.

We add a section plan of A and C areas showing the underground trend of the lode—that is, the "dip" to the south. Parenthetically we may say in the first diagram above the outcrop of the lode at surface has an east to west trend, or, as it is technically termed, a "strike," as shown in the (1A) section-diagram. The owner of property A can only mine lode (or lodes) which outcrops in his property down to the cross that is put vertically under the cross indicating his extent of surface right. The owner of adjoining southern property C has in this case about an equal-sized property as A as to surface rights, and he works the same lode to the extent of his, C's, property, and is able to do so by sinking a vertical shaft, say, to the north of his property, so as to come upon the lode in depth. Similarly with B and D.



With a Rhodesian property the general principle of the law is different. It is the same as with the Witwatersrand as to the extent of surface rights, but if the discovery of a lode is made though its outcrop in the area of surface right of A, such lode can be followed by A, within the lateral boundaries east and west, "in all its dips, spurs, angles and variations," even though the lode continues beneath the surface rights of C or the owners of other more distant surface rights to the south of the outcrop. Should it occur—as it rarely does—that there is a parallel lode which outcrops on the surface of C's area, C can work and indefinitely follow his lode within lateral boundaries, although he has, unless there be an agreement otherwise, no right to work below his surface rights the lode that outcropped in A's property. Similarly with B and D. The position as to Rhodesia is explained below by diagrams (2) and (2A).

This is a general definition of two quite distinct principles, the one as to the Witwatersrand limiting both surface and mining rights to boundaries, and the second as to Rhodesia and America limiting surface rights, but giving the ability to the owner of the area on which lode outcrop occurs the right to mine the lode discovered in his property indefinitely on its dip under areas possessed by other owners who possess the surface rights.

In the United States regulations somewhat similar to those of Rhodesia have led to much litigation, more especially as in America the surface rights of A, B, C and D are frequently muddled into separate small properties interspersed with one another in manner similar to the plan (3) below, and lodes oftentimes erratically branch off into a network. The rectangular shape generally of Rhodesian areas has simplified the matter of following the lode rights. Consequently in Rhodesia there is little heard of litigation.

With the Witwatersrand the clear definition of surface rights and the limiting of mining to a vertical line within the circumference of such mining rights has been found the most simple, and, consequently, litigation there has been conspicuous by its absence.

SPECIAL NOTICE.

On SATURDAY NEXT, OCTOBER 23rd, we shall publish a

SPECIAL BANKING SECTION

Showing the growth and present position of all British institutions engaged in Banking in India, Colonial, and Foreign Countries. The Section will also contain the history of and the data concerning the greatest Banks in the World outside of Great Britain. The information given will enable Bankers, Merchants, and Investors to mark the progress not only of the institutions in which so much British capital is invested and British money is placed, but also the economic condition of the various countries.

The Statist.

LONDON, SATURDAY, OCTOBER 16, 1915.

WAR FINANCE.

Upon reassembling this week the House of Commons immediately gave its assent to the Allies' loan of $500,000,000 from the United States, bearing the joint and several guarantees of the French and British Governments; and subsequently it has discussed the Finance Bill containing the proposals, with various modifications, recently made to the House by the Chancellor of the Exchequer. In this measure Mr. McKenna has brought forward a new proposal to increase the rebate upon incomes assessed to income tax under £500 a year from £20 to £25 per child. Furthermore, in the course of the discussion the Chancellor stated that the Government did not propose to tax the foreign balances left with British bankers, and from this it would seem that the proposal to tax interest on bank deposits will be entirely abandoned as we sincerely trust it will be. The Finance Bill sets out the method by which the 50% war-profit tax is to be calculated. The pre-war standard of profits for the purposes of this Act shall be taken to be the amount of the profits arising from the trade or business on the average of any two of the three last pre-war trade years, to be selected by the taxpayer, provided that, if it be shown to the satisfaction of the Commissioners of Inland Revenue that the amount was less than 6% on the capital of the trade or business as existing at the end of the last pre-war trade year, the pre-war standard of profits shall be taken to be an amount equal to 6% on that capital in the case of a trade or business carried on or owned by a company or other body corporate, and 7% on that capital in the case of any other trade or business. The last pre-war trade year means the year ending at the end of the last accounting period before August 1, 1914, and the three last pre-war trade years means the three years ending at the three corresponding times.

From the discussion of the Budget it is evident that the House is uneasy about Mr. McKenna's proposals. It is recognised that Mr. McKenna has been extraordinarily painstaking in endeavouring to be moderate and to avoid all unfairness and harshness. Nevertheless, everyone who has given any serious study to the matter, whether in Parliament or in the City, recognises that it completely fails to meet the situation, and that fresh proposals need to be made without delay.

Even Mr. McKenna himself seems to have come to the conclusion that the proposals he has so far placed before Parliament need to be supplemented, for on Wednesday Mr. Montagu, the Financial Secretary to the Treasury, made a most important statement in the debate on the Finance Bill. In order that the reader may appreciate the importance of this statement we give it in full.

"Before I sit down, I would like to say a word about the real nature of the situation which this Finance Bill is intended to meet. It is an *instalment* of the provisions which we are making to meet the cost of the burden that we have incurred. I do not think that people in this country, and some of our critics in newspapers, some of the pessimists among others, realise what that burden is. We have first of all kept, and we have to keep, an impregnable and inviolable Navy. We have, in the second place, paid for, and we continue to pay for, an Army which has increased from a few thousands to an Army which runs into millions. Third, we are finding by loan to our Great Dominions part of the expenditure of the contingents that they are bringing into the line of battle. Fourth, as regards India, we are paying the whole of the burden of the Indian contingents, except the normal peace expenditure. Fifth, we have advanced to our Allies such sums as it is estimated in some quarters would keep and maintain in the field three millions of their soldiers. That is the sum that we have been lending to them. I cannot say how long, because one does not know what future demands will be made or how demands will grow or diminish. The only reason I draw the attention of the House to these facts is that we have a right to be proud of the share that we in this country are contributing in this great War; that we ought to be proud of the way in which the proposals for meeting the expenditure on the War have been received by all parties; and that anyone who belittles the share which this country is taking in the War, with those facts staring him in the face, seems to me to be flying in the face of the truth. But I would add the following figures in reference to the question of taxing ourselves adequately to meet the obligations which are incurred, that for the current financial year the expenditure is estimated at £1,590,000,000, and the revenue at £305,000,000, leaving a deficit of £1,285,000,000. Next year, if the present rate of expenditure is maintained, the estimated expenditure will be £1,825,000,000, and the revenue, on the present basis, is expected to realise £387,000,000, leaving a deficit of £1,438,000,000. It will be seen, therefore, that our burden involves a total expenditure by the Government amounting to no less than two-thirds of the entire estimated national income; and yet, despite this, there is said to be in the country a feeling of relief that the Chancellor of the Exchequer has asked for so little taxation.

"I think it absolutely necessary to repeat that the expenditure on this War will have to be borne by the nation almost entirely out of its own pockets and in the form of tax or of loan. And it follows, therefore, allowing for any loans that can be raised abroad, that in order to cover the difference every citizen ought to be prepared to put at least one-half of his current income at the disposal of the State, either in the form of tax or of loan. There seems to be an opinion abroad that the huge deficits can be found out of the enormous accumulated wealth of the country, which is sometimes put at £15,000,000,000, and which my hon. friend the member for Blackburn put at £10,000,000,000. He thinks that it would be quite simple to impose a

tax on that which would raise a revenue of £500,000,000. But you cannot tax capital that you cannot realise. The accumulated wealth is in the form of houses, factories, railways, canals, landed estates, furniture, and, to some extent, securities, none of which can be converted into the goods and services that are required for active warfare excepting in so far as you can sell them or pledge them to foreign purchasers. It is no use lending them or selling them to one another. We have lately raised in America a loan of £100,000,000 sterling. We may find other buyers of our securities, other people who will lend us money; but this is not going to make a very large hole in the figures which I have mentioned.

"There are some people who believe, further, that nothing is easier than for rich men to borrow their money from their bankers and then to lend it to the Government. This device again can have no effect unless the people who carry it out take measures to save and repay the loan from the bankers, at least as rapidly as the Government spends the money. If they do not do that the only effect is that they and the bankers between them have produced a certain amount of credit which can be drawn upon in the form of cheques which they have added to the available supply of currency without any addition to the available supply of goods and services. The only result of this must be increased competition between the Government and the spending public for a limited supply of goods and services. Then follows as a consequence a rise in prices. That stimulates the import of goods from abroad, and, of course, the foreign exchange is depreciated still further. So what is wanted in this War is not artificially created money, but actually produced goods and services which the Government must have for the War, and for which there can be no substitute. As our production of goods and services have been reduced by the flower of our men going to the War, and by the turning of others on to making munitions, the situation can only be met if the rest of the community forego the use of goods and services to which it has been accustomed, so that the labour and energy used in producing them may be transferred to the production of goods and services required for the War. If we are to continue to finance the country for ourselves and our Allies—and nobody doubts that this must be done, and therefore it is what we are determined to do—it can only be by the civil population of this country, of all classes, severely stinting itself and rearranging its whole life on quite a different basis with regard to the consumption of goods and services.

"There is no direction, it seems to me, in which the public can stint itself without exercising a beneficial effect on the national finance. If it goes without goods which are got from abroad it lessens the amount we have to borrow and consequently enables the Government to borrow more cheaply. It also relieves pressure upon our merchant navy, and it tends to check the great rise in freights which have been so important a cause in the rise of the prices of commodities which are imported. If it stints itself by refraining from buying goods made at home it sets free labour and energy to produce things required by the Government, or if sold abroad it improves the state of our commercial balance. If the country refuses to stint itself, in the long run it will be compelled to do so by the consequent rise in prices, which will reduce its buying-power and bring about compulsory reduction of expenditure. I think the sense of relief which has been caused by the moderateness of this Budget arises from an undue appreciation of the state of affairs. It simply means that if there is money left in the pockets of the people that money will have to be got later by loan or taxation. The man who spends on articles which he can do without now, and does not stint himself to the standard of the figures which I have quoted as showing what is necessary, who does not set himself to mould his life so that he will be in a position to afford one-half his income for the country—the man who does not set that ideal before him is, in my opinion, not doing his duty in this War.

"I do not think there has been any true appreciation of that as yet. There is a consumption of more luxuries. Those who dispense luxuries over the counter are doing a roaring trade. The consumption of some luxuries has increased. The consumption of alcohol has increased. I am told that the makers of expensive pianos are enjoying a considerably increased demand. I would observe, further, that there is a tendency to say that whenever you increase taxation you ought, therefore, to increase profits or remuneration, wages, or whatever it may be. If that is the result of the increased taxation you have achieved very little good by it; the money is sent round again, and consumption is not in any way affected. I can only assure this House that we have pledged, and we want to see pledged, the resources of this country to the utmost in this fight. I think it is for the people to see that their resources are ready, and are not dissipated upon private expenditure. The Chancellor of the Exchequer, I can assure the House, intends to develop, with all possible rapidity, the compulsory taxes of the country, but this by itself cannot be adequate to meet the case. Voluntary saving and voluntary readjustment of the standard of life by all patriotic citizens are now required of them more urgently than anything else if the ultimate victory which we confidently expect and look forward to is to be made assured and certain."

This statement of the case leaves little to be desired. At such a time as this it is much wiser to do too much than too little, and if the nation could reduce its domestic expenditures by one-half so much the better. Nevertheless, it is essential for the Government and the nation to realise that words accomplish nothing and that, especially in time of war, deeds alone count. In April the situation was most carefully explained to the country by Mr. Lloyd George, and in July Mr. Asquith's reply to the important deputation of bankers was all that could be wished for, but the Government did nothing, and the result was the great break in the American exchange. Now in September Mr. McKenna has presented another Budget. His statement of the situation left nothing to be desired, but no more than £33,000,000 is provided out of taxation towards meeting the deficit for the year of £1,317,000,000, and practically nothing is done, having regard to what needs to be done, to balance either the Budget or the foreign exchanges. Will Mr. Montagu's statement of the position result in more adequate steps being taken to deal effectively with the situation, or will the Government wait for further object lessons on the danger of procrastination, such as that given by the break in the American exchange, before taking the action which the situation described by Mr. Montagu so urgently demands. The hands of the clock won't stand still whatever one's wishes may be, or whatever one's theories. We would here state that we have no doubt the Government will sooner or later take the essential measures, and that the people of Great Britain will keep their expenditures and their purchases of foreign goods within their power to pay for them without needing to reduce unduly their stock of the precious metals; but as each day passes without the situation being dealt with effectively and comprehensively the problem becomes more and more difficult and the measures needed to put matters right become increasingly drastic.

Now what is the situation, and what are the measures required to deal with it? Mr. Montagu stated that the deficit to be provided this year is nearly £1,300,000,000, and next year, notwithstanding the additional taxation, it will be over £1,400,000,000. He might have added that as a result of these expenditures, and of the method of financing them, the country's adverse trade balance is now at the rate of some £600,000,000 a year, and

with still greater Government expenditures next year the balance may be greater still. Mr. Montagu further stated that, "allowing for any loans which could be raised abroad, every citizen ought to be prepared to put at least one-half of his current income at the disposal of the State," as, roughly speaking, the Government expenditure amounts to about 50% of the expenditures of the entire country.

In considering this position and the power of the nation to meet its expenditure, it is essential to recollect that the domestic expenditures of the nation have been, or ought to have been, greatly reduced by its war expenses. Thus a large number of men are now in the Army, and are being maintained out of the War Loans, who before the War merely assisted the nation to spend its income pleasantly. They did nothing, or next to nothing, to add to it. Thus the wages paid to men who were formerly engaged as men-servants, waiters, gardeners, chauffeurs, gamekeepers, &c., were of the nature of luxury expenditures, and the transfer of these men to the Army has meant that their former employers have that part of their income which formerly went to pay for their services available for war expenditures.

In a certain sense the persons who employed these men are richer because the cost of maintaining servants has been transferred from themselves to the nation. How much additional money this has set free for war purposes cannot be exactly estimated. It must reach a large sum. Again, it is evident that the profits accruing to trade and industry of all kinds and descriptions have very largely increased, and unless the owners are more lavish in their expenditures than formerly, these additional profits are also available for war expenditures. Then, again, the incomes of many wage-earners have so greatly increased that they have large sums of money available for war expenditures after providing for their own maintenance. Lastly, the earnings of many families have been enhanced by the higher incomes of the women who are filling posts previously occupied by men. In fact, it is obvious that without any reduction whatever in the normal rate of the nation's domestic expenditures per head of population that the savings of the nation have been very greatly increased. As far as the data permit an opinion to be formed we have come to the conclusion that, owing to normal savings, to abnormal profits, and to the mere reduction in ordinary expenditure by the transfer of men from the luxury trades to the Army, the savings of the nation available for war purposes have risen from the normal £400,000,000 a year in peace time to about £700,000,000, and that to meet the existing expenditures a further increase of about £600,000,000, rising to £700,000,000, is needed. To find this sum should not be a difficult task. How much we can borrow abroad or realise by the sale of securities can be decided only by experience. Having regard to the friendly spirit of the American people, and the desire of everyone in all parts of the world to do what they can to assist the Allies, not much difficulty should be experienced in raising abroad by loan or by the sale of securities some £300,000,000 a year. In the current year America will probably supply us with £200,000,000, either directly or indirectly, and next year the sum may be greater. If we can borrow about £300,000,000 out of the £600,000,000 to £700,000,000 we need, all that we have to do is to provide the remaining £300,000,000 to £400,000,000 ourselves by increasing production and reducing consumption. We are convinced that the difficulties in solving the problem of finding this additional money will disappear the moment it is squarely faced. No finer temper could be shown by a nation, both in the matter of men and of money, than is being displayed by the British nation to-day. Everyone the writer has met is willing to give himself or his sons for his country, and is prepared to contribute his last shilling if necessary to meet the expenses of the War. Indeed, the only thing required is that the Government should let the country know what is needed, and should distribute the taxation or levy in such a way that all classes are convinced they are dealt with fairly. Graduated contributions from all family incomes of over £80 per year would provide the money required without anyone being compelled to forego expenditure that was really essential. Not only is the nation willing, but expects to make this sacrifice, and is merely waiting for the Government to take the measures essential. We trust that Mr. Montagu's statement means that the Government has at last got its courage to the sticking point, and will no longer delay to take the measures which have already been delayed too long.

In one way or another the financial problem seems to have become involved in the question of conscription, and the arguments applying to the one are applied to the other. Of course we are entirely in favour of doing by voluntary means all that it is possible to accomplish in this way, and we regard the manner in which the men of Britain have come forward without compulsion with pride and pleasure. Moreover the manner in which money has been found for the war in abundance is a matter upon which the nation may well look back with the greatest satisfaction. If this were not such a great war, and we had not such vast financial responsibilities, the policy hitherto pursued would have been all that was required, but it is a very great war, and to meet the cost of it the nation is compelled to adopt every feasible measure of providing all the money required. The British people must use their capital and their credit as far as they can, but they must also resort to the greatest of all reserves that a nation possesses, the power of a determined people to deny themselves luxuries and comforts. The character of the British people renders the mobilisation of this reserve a specially difficult one to pursue in a voluntary manner. Consequently even persons who are strongly opposed to conscription are quite willing to submit to financial conscription, especially as they have always been accustomed to meet the expenditures of the State by taxation. If the extra taxation were to be raised as a levy repayable at the end of the War in War stock their willingness to find the necessary money would doubtless become still greater.

Moreover, the advantages to be gained, especially at the present time from the introduction of greater economy into the domestic expenditures of the nation, would not be confined to the mere finding of money for the War, it would materially assist in finding the men too. In no small measure the difficulties of recruiting have come from the unexampled prosperity of the country arising from the vast war and domestic expenditures, and if these expenditures were checked by economy many men of military age would be set free for service. In fact, the voluntary system of recruiting which so far has been so successful, is being seriously hampered by the vastness of our expenditures, and would be materially assisted by the introduction of economy. Thus, the introduction of economy into the domestic expenditures of the nation by means of taxation or by a levy for war purposes upon all classes of the community other than persons below the poverty line would provide the balance of the money urgently needed for the War that cannot otherwise be supplied, would readjust and maintain the foreign exchanges by bringing about a decline in imports and an increase of exports; and, lastly, would set free from the luxury trades a good many men for the Army.

THE BALKAN CRISIS.

THAT portion of the Press which seems intent upon creating apprehension in the minds of the public with the object, we suppose, of discrediting the Government, has been quick to seize upon Sir E. Grey's speech on the Balkans, denouncing it as denying the

information to which the public is entitled Such conduct is mischievous in the extreme, and we sincerely hope will be condemned unmistakably by public opinion. M. Viviani, the French Premier, has spoken in each Chamber of the French Parliament this week on the Balkan question, as well as Sir E. Grey, and he has been quite as cautious and quite as reticent. From both we learn, firstly, that British and French forces have already been landed at Salonika with the consent of the Greek Government; secondly, that a Russian force will be dispatched to assist in the protection of Serbia as soon as it can be forwarded; and, thirdly, M. Viviani has reason to believe that Italy, likewise, will take part in the operations. Four great Powers, then, allied together are about to exert themselves to protect Serbia, and it is manifest that each one of them is bound not merely to consult with all the others as to what is to be done and what is to be said, but that any Minister of any of them who would venture to say or do anything displeasing to his Allies would be guilty of a grave misdemeanour. Instead, then, of finding fault with the reticence of the speeches of our own Foreign Secretary and the French Prime Minister, we have every reason to commend their caution. We frankly admit that there is much to be said against the policy which has been decided upon by the four Powers. It is believed that the chief cause why M. Delcassé has resigned is that he did not think it wise to send a French force so far away when the soil of France itself has not been freed. And it is notorious that many amongst ourselves are, likewise, doubtful respecting the wisdom of the course adopted. We ourselves venture to give no opinion, for the full facts of the case are not before us, and it seems to us that in so grave a crisis a man is acting contrary to the true interests of his country who blurts out unfavourable criticism when he has not evidence enough to give a well-informed opinion.

It is clear that Serbia alone is not in a position to fight the two Central European Powers. It is equally clear that the action of Bulgaria makes the danger to Serbia greater than ever. Lastly, it is as clear as the sun at noonday that the decision of both Greece and Roumania will be considerably influenced by the course pursued by the Entente Allies. It will be well to bear all this in mind, and to reserve judgment until we have the true facts more clearly before us. Nobody can doubt who knows the relations of the Balkan States one with another the character of the several sovereigns and of their chief ministers, that Bulgaria has been led into a policy contrary to the wishes of the great majority of her people—contrary, likewise, to her own real interests—by promises from the two Central Empires which, it is safe to say, will never be carried out. On the other hand, the two Central European Empires are very close to the Balkans. And it is natural that the Balkan sovereigns and statesmen should hesitate. Lastly, it is never to be forgotten that the sovereigns of Greece, Bulgaria, and Roumania are all Germans, and not unreasonably are believed to entertain pro-German sympathies. The real question, then, is, Are we, as Lord Morley said on Thursday in the House of Lords, dispersing our resources too much, or is it essential that we should so strengthen the Balkan States that we should give them courage to act in their own interests and to open the Dardanelles? Until experience decides there will be differences of opinion on these points. For ourselves we reserve judgment until all the facts are before us. If, for example, both Greece and Roumania desire to assist Serbia, but are afraid to do so until they are backed by the whole great Entente Powers, then we say unhesitatingly that the Government policy is right. If, on the other hand, both Greece and Roumania prefer neutrality, the question becomes more doubtful.

Meanwhile, Sir Edward Grey and M. Viviani tell us that not only have French and British troops landed with the consent of the Greek Government, but that the Greek people strongly sympathise with Serbia. There is a treaty between Greece and Serbia binding Greece to assist Serbia if she is attacked by Bulgaria. A flimsy excuse is put forward by the present Greek Government to justify its inaction, but it is notorious that the present Greek Government has but a very small backing in the Chambers, and at any moment, therefore, it may be overturned and King Constantine may be compelled to fulfil his treaty engagements. Similarly, everybody can see who has studied the Balkan question and followed the course of events both in Austria-Hungary and in Roumania that Roumania has the very strongest interests for not only helping Serbia, but for striking down Austria-Hungary; for if she can wrench Transylvania from the Dual Monarchy she will not only add three millions of enthusiastic subjects to her dominions, but she will also free that number of near kinsmen. There is, then, reasonable ground for anticipating that the action of the Allies will have a beneficial effect upon the policy of both Greece and Roumania. The present Government of Bulgaria has gone too far to withdraw. But there are grounds for believing that the majority of the Bulgarian people strongly object to war against Russia—the Power which freed them 40 years ago from Turkish tyranny. Consequently, a strong allied contingent protecting Serbia may have a powerful influence upon the opinions of the Bulgarian people, and may put an end to a state of things which is, to say the least, very threatening. We would advise our readers, then, to reserve judgment, to take fully into their consideration the strong reasons that exist for doing what is possible to prevent an Austro-German force overrunning Serbia, relieving Constantinople, and opening the way to the Persian Gulf. It is not a very small interest that we are fighting for. The attack of the Central European Empires is an attack upon a position which is of the very utmost interest to us, for it is practically an attack upon the road to India. It may be, of course, that strategic considerations would decide in favour of crushing the enemy in France, Belgium, and Poland rather than in dispersing forces so widely. But it is to be presumed that the British Empire, Russia, France, and Italy have all taken counsel with their military and naval advisers, and that they have not rushed blindly and ignorantly into what they must be aware is a very grave undertaking.

M. DELCASSÉ'S RESIGNATION.

All well-wishers of France have learned with the deepest regret the resignation of the French Minister of Foreign Affairs, one of the ablest statesmen of his generation, and a public man who has done more than any other individual to revive in the minds of Frenchmen confidence in their country, and to point out the way by which they could raise her once more to her old position upon the Continent. M. Delcassé, our readers will remember, evoked the strongest hostility in Germany because, when first Foreign Secretary, he dared to reject the policy which had been imposed by Germany upon his country, and to strike out a line for himself which has gradually led up to the Alliance which is now challenging the supremacy of the two Central European Empires. The burst of indignation in Germany created a scare in Paris and M. Delcassé had to resign. For a time, indeed, he had to disappear from active public life. But his countrymen soon recognised the great services he had rendered, and he was restored to office. He served for a considerable time as the representative of France at the Court of Russia, and recently he has been French Foreign Minister. It is well known that he has been lately seriously ill. Unfortunately, he is of a disposition which does not care to work through subordinates, which insists upon doing everything

important himself. Therefore the drudgery he undergoes is very great and, combined with the anxieties and the worries of the present War, no doubt has undermined his health. There would seem to be, likewise, some disaccord between him and his late colleagues. The Prime Minister asserts that up to little more than a week ago M. Delcassé had not expressed any disagreement with the policy that was being pursued. But it would seem that in his last letter of resignation—for he wrote more than one—M. Delcassé himself stated that he was not quite in accord with the policy that was being carried out. However, the Prime Minister declined to read the letter, alleging that he was unauthorised to do so. Therefore no good purpose can be served in following up the matter. We trust and believe that the differences of opinion are slight, and that M. Delcassé is really in a state of health which makes it advisable that he should seek rest. It is true, no doubt, that his colleagues urged upon him to take a temporary rest without resigning. But he may well have considered that the man who guides the foreign policy of France should not be a mere temporary holder of the office, but should feel all the responsibility of the official Secretary of State.

As we see no advantage in pursuing the matter further, we are content to wait until M. Delcassé and the Government are satisfied that the full correspondence can be published without injury to France. In the meanwhile we most sincerely hope that M. Delcassé will be quickly restored to health; that he will take leave of Paris for a while; and in good air, quiet, and seclusion he will recover his strength rapidly. We are quite sure that M. Delcassé is too good a Frenchman to say or do anything that in his opinion would be prejudicial to his country. When he first came forward with the policy which prepared the way for the *Entente* with England he was the only French statesman who recognised that a new generation was springing up in France which was impatient of the subordinate part their country was playing towards Germany, and who were full of confidence in the spirit of the country and the capacity of the people to restore France once more to a leading position. For the moment, owing to the timidity of his then colleagues, he had to resign under German threats. But his country did not forget the service he had rendered, and we feel very sure that as soon as his health is restored he will be as ready as ever to do for France everything that lies in his power. His presence in the Cabinet unquestionably gave confidence to all the Allies, and particularly to our own country. We knew that he was the first to see that an alliance between England and France would help France to retake her old position, and the courage that he showed in preparing the way for the *Entente* has made a deep and lasting impression amongst our people. Most sincerely, therefore, do we regret the necessity he feels himself under to retire even temporarily from the service of his country. But we do not doubt for a moment that, whenever wanted, he will be ready to step forward again.

There are few public men in Europe at present who have perhaps a wider or a firmer grasp of international policy. He has studied it not only in France from the point of view of Foreign Minister. He has studied it likewise as the representative of France at the Russian capital. Properly, then, his presence at the Foreign Office was regarded by all the Allies as a guarantee that the French policy would be wisely carried out, and that nothing would be left undone which foresight and wide experience would dictate. It is, perhaps, well that he should just now take a rest. The colleagues he is parting from are all men of first-rate ability, all filled with his own spirit and patriotism; and all to be depended upon to do everything possible for bringing the War to a successful points of view critical. Especially, it is critical termination The moment, no doubt, is from certain because of the condition of things in the Balkans. But it is to be recollected that the winter is now rapidly approaching; that it is scarcely possible that any new and great military adventure can be entered upon by the one side or the other; and that, therefore, in all reasonable probability we have the winter before us in which to reconsider all our plans, to review calmly the past, and to think out carefully our pressing duty for the spring. France up to the present has made very great exertions. It is true that when the War broke out she was less well prepared than might have been expected considering, firstly, the breathless haste with which Germany was increasing her army and building up a great fleet; and considering, furthermore, the certainty that whenever Germany felt herself ready France would be the very first to be struck at. The excuse for France is that her Parliamentary system was a bad one; that it made it impossible for any Cabinet to live long enough to carry out a well-considered and coherent policy; that Ministries followed Ministries so frequently that practically the administration of the country was left in the hands of the permanent officials, and that Parliament did not recognise in a sufficiently serious spirit the real temper either of France or of Germany. All that has now ceased. Nobody can for a moment doubt that the French people are resolved to see the War fought out to a successful finish; and, therefore, perhaps no better time could be found for M. Delcassé taking a rest which apparently he so urgently needs.

BUENOS AYRES GREAT SOUTHERN RAILWAY.

The working results of the Buenos Ayres Great Southern Railway Company in the past year, as disclosed by the report now to hand, come out much better than they appeared from the preliminary statement. When announcing the payment of an interim dividend at the rate of 4% per annum in April last it will be recollected the directors stated that such a dividend had not been earned, and that the reserve fund had been drawn upon to make good the deficiency. How much had been taken from reserve was not disclosed, but whatever it was it has apparently been refunded, and the dividend of 4% for the year is paid solely out of profits earned plus the greater portion of the balance brought forward from 1913-14. The profit available for distribution is £838,000, a sum equal to not quite 3% on the Ordinary capital, and after paying 4% on the stock, the balance carried forward is reduced from £316,000 to £58,000 only. The Company was able to save approximately 40% of the falling off in earnings by reductions in expenditure, for with a decline in gross receipts of £523,000, the decrease in net earnings comes out at £310,000, or 13.6%. Interest charges on balance were slightly smaller, and the decline in profit amounts to about £290,000, or 25%. The Company suffered from unprecedented floods during the year, causing considerable damage to property. This will involve an expenditure on repairs, &c., of over £200,000, of which £165,453 was incurred during the year under review. This latter sum has been apportioned between the casualty and reserve funds, the former of which has been absorbed. To this extent, of course, the net revenue of the past year has benefited. The total estimated tonnage of the wheat, barley, and outcrops from the 1914-15 harvest from the Company's own district is expected to amount to 1,300,000 tons, of which 1,040,000 tons had been carried at June 30 last. The balance remaining to be transported at that date was larger than is usually the case. Moreover, the weather was quite propitious during the ploughing and sowing of the coming crop, and although rain was at one time wanted, seasonable showers have since occurred which have assisted the young growth. The price of the stock is about 80, and on a 4% dividend basis the yield afforded is of £5$\frac{1}{2}$ per cent.

WITH HOW LITTLE WISDOM THE WORLD IS GOVERNED.

Few things are more surprising than the attitude taken up at the present moment by the several Balkan States. Evidently the King of Bulgaria is of opinion that the Central European Powers will win; and equally evidently the Sovereigns of both Roumania and Greece entertain strong doubts upon the point. Furthermore, if we listen to our own sensational and militarist Press, we see that there is a widespread impression here at home that, to say the least, Germany has a fair chance. Furthermore, many of the neutrals, judging from their actions at all events, are by no means convinced that the *Entente* Powers will succeed as completely as their Governments declare they are resolved to do. Is there real ground for this uncertainty? It seems to us worth while to answer the question, for it will be seen that the doubts respecting it are influencing the practical conduct of Governments. Upon the side of those who believe that Germany will come out, if not victorious, at least not seriously injured, it may be urged, firstly, that she had devoted herself for half a century to preparing for this particular War; that she chose her own time, satisfied that she was prepared and her enemies were not; and that at the end of fourteen months she holds possession of nearly the whole of Belgium, of a very considerable part of France, and of nearly all Russian Poland. It is an exceedingly strong position, looking at the facts as they exist to-day. It would be foolish to attempt to persuade anybody that Germany has not done a very great deal, and that she has not proved that, at all events in preparation, she has given evidence of great foresight and great resources. Now let us turn to the other side. England had been warned for a whole generation that Germany was preparing to attack her. But English Governments, one after another, had refused to admit that it would be politic on their part to send a great army to the Continent. Therefore, they put their main trust upon the Navy. And they have swept the enemies' shipping from the seas. The enemy, except through neutrals, can obtain no foreign supplies, and the enemy cannot show its flag upon the seas. So far, then, as naval preparation is concerned, England has done as well as she anticipated. She likewise has proved that in naval preparation she has shown great foresight and great resources. On the other hand, after many debates in Parliament, and much discussion in the Press, Lord Haldane decided upon reorganising the Army. He professed to give the country an Expeditionary Force of about 150,000 men, and to raise a Territorial Force which would be sufficient to defend the United Kingdom from invasion. The Expeditionary Force, when the time came, was forthcoming, and did splendid service at Mons and elsewhere. The Territorial Force has also done splendidly. Moreover, in response to Governmental appeals there have been raised new armies amounting to somewhat over 2,000,000 of men. It was notorious to everybody that 2,000,000 of men could not be clothed, armed, fed, and disciplined in a very short time. It is barely fourteen months since the War broke out. Already we have assembled such an army in France as is capable of taking the offensive, and is pressing the Germans hard. We have also an army at the Dardanelles. Now we are sending an army to Salonika. And, in addition to what the United Kingdom itself has been doing, India and all the self-governing Dominions have furnished us with very large forces which have done splendid service both in France and Belgium and at Gallipoli.

The French were admittedly not prepared. Only a month or two before hostilities began the French War Minister admitted that there was a shortage in munitions, and even in boots. As for Russia, it was notorious that after the War with Japan she had undertaken to reconstitute her Fleet and to reorganise her Army on an entirely new principle. Furthermore, she was so doubtful as to the progress she had made that she had publicly announced that she would carry out a test mobilisation in the autumn of 1914. We have often before put these facts before our readers. But, even at the risk of wearying them, we repeat them to-day for the purpose of asking the plain question, Did any one of them when hostilities began expect that three countries like England, France, and Russia who were notoriously, and even admittedly, unprepared, could in fourteen months not only make themselves ready both by land and by sea, but could also drive the enemy, who for half a century had been preparing for the struggle, back over his own frontiers? If people, instead of wasting time in studying dead languages, which they never master, would give some reasonable attention to history, we will not say general history, but even to the history of their own country, they could not possibly make such a mistake. Have our people completely forgotten that their ancestors entered into the war with revolutionary France in 1793, and that, except for two short intervals, the struggle lasted till 1815, a period of twenty-two years? Compare that with fourteen months at the present time. Again, have they completely forgotten that the American War of Independence began in 1776, and peace was not concluded until 1783? Lastly, are they quite ignorant of the fact that the Crimean War began in 1854 and did not end until 1856? And yet the Crimean War was not for conquest. On the contrary, England and France bound themselves not to take any Russian territory. The operations were confined to the siege of a single city. Practically the war resembled very closely the present struggle, except that it was concentrated on one spot, and that the artillery of that day was a very small thing compared with the artillery of the present day. If our people would only read up, even in a casual way, the history of the great wars in which this country has been engaged they would see that those who talked of a short war were persons who were completely ignorant of what war means. In this Journal the present writer at the beginning of hostilities stated again and again that it was understood that Lord Kitchener expected the War to last for three years, and he went so far as to say that the estimate appeared by no means to err on the side of over-sanguineness.

In our deliberate opinion Germany has committed the grossest and the gravest mistakes; whereas the *Entente* Allies have done more in fourteen months than we ventured to hope they could do. And we may add that in our own deliberate opinion, no matter what may happen in the Balkans, Germany and Austria-Hungary are already defeated, and from now onwards will be out-matched both in numbers and in munitions. Recollect that the result of war depends upon three things—namely, the numbers which the several combatants are able to bring into the field; the capabilities of the several combatants to feed, clothe, arm, and supply with everything necessary the men in the field; and generalship. Now it is as plain as that two and two make four that the *Entente* Allies immensely outnumber the enemy and, consequently, can go on fighting for a much longer time. We will say nothing of the loss of life to the enemy because they fight in massed formation. We will assume, for the sake of argument, that the losses have been nearly proportionate. Yet when we bear in mind that Russia alone has a larger population than Germany, Austria-Hungary, and Turkey all added together it is manifestly true that the *Entente* Allies vastly outnumber their enemies. With regard to supplies, England and France have greater credit than Germany and Austria-Hungary; while England, France, Russia, Italy, and Japan, if they find it necessary to make an extraordinary exertion, can furnish themselves with supplies out of all proportion greater than those obtainable by the Central European Powers. Lastly, we come

to the question of leadership. The present writer cannot call to mind any more flagrant case of utter incompetence than that displayed by Germany in the present War until he goes back to our own blundering and floundering during the American War of Independence. Germany assumed that, having control of the resources both in men and material of Austria-Hungary, she could use the latter to keep Russia practically at arm's length, while she herself overran Belgium and France and took possession of Paris. Austria-Hungary was not able to keep Russia at arm's length. Germany found that the "contemptible little British Army" with the French was able to inflict such losses upon the invader that he was turned back at the Marne and the Aisne. The whole winter was spent by Germany in attempts to recover ground, but in vain. And now the British and the French have assumed the offensive and are driving the enemy from trench after trench.

Whether the Germans, disgusted with their failure in France, turned to Russia in the hope of setting things right, or whether Austria-Hungary had so broken down that the Germans feared a Russian invasion of Prussia, we leave to each reader to settle for himself. But the fact is unquestionable that the Germans had very greatly to weaken their armies in France and Belgium so as first to stop the Russian advance, and then to drive them out of Russian Poland. Now the rainy season is in activity. The Russians are assuming the offensive. The Germans are suffering defeat. And there seem good grounds for believing that the German forces in Russia have been very seriously reduced. Each reader will have to decide for himself whether this is done to strengthen the German armies in France, or whether, Bulgaria having been seduced, the troops that it was supposed could be spared from attacking the Russians are being sent to crush Serbia and so relieve Constantinople from the Franco-British attack. But whichever way one looks one sees that the Germans have gained no real advantage anywhere. They are almost on the eve of winter in Russia, when the cold will play havoc with them. They are obliged to spend another winter in the trenches in France. And they are madly engaging in another expedition at the very extremity of Europe. Anything more insane than the strategic plans of Germany it is scarcely possible to conceive. We will not venture upon estimates as to what resources in men remain to the two Central European Empires, for we have not access to the official figures and guessing will not help us much. But unless our own Government, the French Government, and the Russian Government have all combined to mislead the public, the system of attack pursued by the Germans, their massed formations, and their great dependence upon artillery of a huge type make it reasonably certain that the losses of the Germans and the Austrians have been immense; that nearly every man capable of fighting has been called up; and that the question now is practically presenting itself, How are reserves to be found? If men are withdrawn from the mines and the factories to put them into the fighting line, how can those of the fighting itself, How are reserves to be found? If men are if the workers are not withdrawn how is the wastage of war to be supplied?

Canada Landed and National Investment Co.—Dividend of 2½% for quarter.

Commonwealth and Dominion Line.—Bonus of 2%, tax free, on Ordinary shares, making 8% for the year.

Edinburgh Investment Trust.—Interim dividend on Deferred stock at the rate of 12% per annum, less tax.

International Banking Corporation.—Dividend at rate of 6% per annum for half-year.

Merchants Bank of Canada.—Quarterly dividend of 2½% upon the paid up capital stock.

North of Scotland and Town and County Bank.—Dividend for half-year at rate of 12½% per annum, less tax.

National Bank of Australasia.—Dividend on both Preference and Ordinary shares for half-year at rate of 7%.

For over a Century the Claims paid under Whole-life Policies have, on the average, been more than

Doubled

in amount by addition of Bonuses.

Financial Notes.

It is with much regret we record the retirement of Mr. Howard Gwyther from active business life. Mr. Gwyther has been in active business in the City since 1851. He has held successively the position of General Manager and of Chairman of the Chartered Bank or India, and he has sat as director on the boards of several other banks. In every one he has shown the highest capacity. Indeed, few men have been held in higher regard in the City. After so long, so useful, and so distinguished a career, he is well entitled to rest. We trust that he will be able to enjoy many happy years yet. For all that, we frankly admit that we regret his retirement. He belonged to a generation in which a very great number of distinguished bankers flourished. We are not so well provided now that we can spare so competent a man.

The United States Department of Agriculture has published a bulletin on the unusual spread of the boll weevil this year, from which we learn that the weevil usually in the past has advanced into new territory at the rate of about fifty miles per annum, but that in a single fortnight this year it has advanced almost a hundred miles, carrying the insect into twenty-five counties of Georgia, as well as into several districts in the States of Alabama and Florida. The principal cause assigned is the high winds which ruled towards the North-east for several days after the middle of August. It is added, however, that the drought in Alabama and Mississippi aided in the dispersion of the weevil.

The Pilgrims of the United States gave a dinner on the last day of September to the members of the Anglo-French Financial Commission. Sir Edward Holden, being indisposed, was unable to attend. But all the other members of the Commission were present. Mr. Choate, Chairman of the Pilgrims, amongst other things, said that although the United States is a neutral nation, every one of its people is guaranteed by the Constitution the right to freedom of speech, freedom of thought, and freedom of the Press. Therefore, he said, he was justified in

giving vent to his own opinion respecting the Great War. "Whenever I see men fighting for liberty, justice and civilisation, my heart is always with them. On the other hand, when I see men commit the grossest brutality and cruelty my heart is all against them."

He went on: "My friends from England and France have been steadily labouring with financiers, and they have reached a conclusion after two weeks which, if they had appealed to the people of this country, they would have reached in twenty-four hours; I thank them for giving Americans the chance of helping matters along. Fourteen months the War has been waged and now I hope that every man, woman and child of the United States who has got a hundred dollars will invest it in this loan, and what's more I hope that this is only the first instalment. It is a great thing for us to have the opportunity to help, and think that the people here are grateful for it. I am speaking for myself, and constantly, daily and nightly, I am sympathising with the Allies. I verily believe this is the sentiment of ninety millions of the one hundred millions of my countrymen."

It will be in the recollection of our readers that the United States Controller of the Currency gave an opinion that a government is not a person, company, firm or corporation within the meaning of the National Bank Act; and that, therefore, the limitation on the amount of loans to 10 per cent. of a bank's capital and surplus does not apply in connection with loans to a government. It has been pointed out that the Controller is without authority to control the National Banks in such matters, and that the question of participation in loans is entirely a matter for the officers and directors of a bank to determine. Whether that be so or not, it may be worth while to quote the following from the statement issued by the Controller:—

"In response to inquiries which have been received at the Controller's Office, as to whether National banks will be limited in taking Government loans by the provisions of Section 5200 U.S.R.S., which restrict the total liabilities to any national bank of 'any person or any company, corporation or firm for money borrowed' (not including discount of commercial paper, &c., actually owned, and bills of exchange against existing values) to one-tenth of the capital and surplus of the bank, but in no event to exceed 30% of the capital stock of the bank, the Controller of the Currency said to-day: 'This office has been advised by counsel that governments are not corporations or persons within the meaning of Section 5200, and that investments made by national banking associations in Government securities, such as Government bonds, in excess of 10% of the unimpaired capital and surplus of the association would not be in violation of that section.'"

The New Trans-Canadian Railway.—At the invitation of the directors, a party numbering about 140, including the Senators and Members of the Dominion Parliament, this week commenced a ten-day trip across Canada to formally inaugurate the completion of the 3,000 miles of the Canadian Northern Railway from Atlantic to Pacific, fed by about 6,800 miles of contributary lines and branches.

Pacific Loan and Investment Co.—Interim dividend of 3%, less tax.

General Steam Navigation.—Interim dividend of 3%, less tax, on Ordinary.

CHESAPEAKE AND OHIO RAILWAY.

The ability of the directors of the Chesapeake and Ohio Railway successfully to carry out the big programme entered upon in the spring of 1914 has been increased by the boom in industrial activity in the United States which has arisen from the enormous purchases of the belligerent nations. When $33,000,000 of 5-Year Notes were disposed of in March 1914 the directors agreed to set aside during the currency of the Notes no less than $17,000,000 of net income for various capital purposes, including payments and discounts upon Equipment Trusts. Of this sum $2,000,000 was handed over to the trustee of the Note issue during 1914-15, $3,000,000 is to be handed over this fiscal year, and $4,000,000 in each of the next three years. The agreement covering the Note issue also provided that until 1919 no distributions shall be made upon the stock unless all payments to the trustees shall have been fully met. The significance of this arrangement will be more apparent when we say that out of last year's net income a sum equal to 3.18% on the stock had to be handed to the trustee, that this year the quota so payable will equal 4.76%, and that for each of the following three years the trustee will receive a sum equal to 6.35% on the stock before any dividends are rendered permissible.

From the point of view of business handled, and the revenue derived therefrom, the past fiscal year was an unprecedentedly active period for the Chesapeake. As in the case of the Norfolk and Western, the bulk of the Chesapeake's business consists of bituminous coal, which is carried at exceedingly low rates to tidewater at Newport News. Large quantities of the mineral are also conveyed westward, while a further considerable amount is shipped to the Lakes. In the past year of a total revenue tonnage of about 30,000,000 tons, 21,000,000 tons, or 70%, consisted of bituminous coal. The expansion in the volume of the freight traffic, tons carried one mile, was no less than 15.2%, and arose from several causes. In the first place the Chesapeake conveyed over 122,000 horses and upwards of 30,000,000 bushels of grain for export purposes, these figures in both instances being abnormal. But this traffic, while looming large in gross receipts, was not of a particularly profitable nature. Secondly, and by far the more important factor, was the bringing into operation of the new coal-handling plant at Newport News. Previously the Chesapeake was somewhat at a disadvantage with regard to the facilities at that port in comparison with its competitors, but last year, by means of a pier equipped with every modern appliance for the expeditious handling of coal, the Chesapeake

offered a service comparable with, or better than, any competitive road. In view of the really marvellous expansion in the production of bituminous coal in Virginia, West Virginia, and Kentucky—the production for 1914 having exceeded 100,000,000 tons, against only 45,000,000 tons ten years ago—it is little wonder the quantity of traffic the Chesapeake has been called upon to handle has shown continuous increase. As the United States grows in population and in wealth, and the manufacturing industries of the country expand, the demand for the mineral will reach still larger proportions. Indeed, the volume of this traffic anticipated to accrue to the Chesapeake is likely to rise to such totals as will tax the ingenuity of the officers of the road.

Despite some falling off in passenger traffic the gross earnings for the past year expanded no less than $2,004,000, or 5.4%, and inasmuch as there was an increase of $1,143,000, or 4.3%, in expenses the addition to the net earnings was $862,000, or 7.8%. Net earnings last year amounted to $11,908,000, and were the greatest ever secured, apart from those for 1909-10, which reached $12,290,000. Last year's improvement in net earnings was unfortunately more than offset by a decline of $1,039,000 in miscellaneous income, due to three causes. First, the Company received only 4% on its holding of Hocking Valley stock, against 8% in 1913-14. Further, nothing was received on account of Kanawha and Michigan stock through the Chesapeake's holding in this road having been disposed of by order of the courts towards the close of the previous year. Lastly, a great deal of the war traffic handled last year came to the road in foreign cars, and a large expenditure was thereby incurred for hire of equipment. Interest charges and taxes called for a slightly larger sum, and on balance the net profit amounted to $2,664,000, or $328,000 less than for 1913-14. The net profit of last year was equal to 4.24% on the stock, against 4.72% in the previous year. Whereas in 1913-14 four quarterly dividends of 1% each were paid, in the past year only one distribution of 1% was made in December last, since when no dividend has been distributed. To pay this latter dividend required $628,000, thus leaving a balance of $2,036,000, a sum slightly more than sufficient to make the requisite payment to the Note trustee.

Speaking generally the traffic of American railways doubles every decade, but in the case of the Chesapeake the growth is even more rapid. In the past ten years the revenue ton-mileage expanded no less than 117%, but owing to the greater growth of low-class than of high-class traffic the average freight rate secured declined very considerably. Hence gross receipts have not shown a gain anything like that secured in revenue ton-miles. Nevertheless they expanded over 90% in the decade, but against this operating expenses increased no less than 112%, so that there was a gain of only $4,205,000, or 55%, in net earnings, all of which has, however, been slightly more than absorbed by extra interest and other charges. Therefore, in 1914-15 the net profit was a shade less than in 1904-5. It has, of course, to be borne in mind that in the meantime wages and taxes have called for largely increased sums; indeed, since 1909-10 alone the addition to expenses from these causes has been equal to at least 4½% on the stock. Moreover, a good deal of new capital has been expended in recent years upon the Chicago extension and various improvements, as well as upon investments the full benefit of which is not at present being derived. With the application of large surplus profits each year to capital purposes, and the unlikelihood of any marked expansion in interest charges in the next few years, a good deal of the addition to the net earnings that may be secured may be saved as net profit. The course of earnings, expenses, and profits during the past decade will be apparent from the Income Statement herewith.

The increase in expenses last year arose mainly from heavier maintenance costs, for upon both the road and equipment greater expenditures were made than ever before. Per mile of road nearly $2,000 was spent on maintenance of way, against under $1,800 in 1913-14, while upon equipment nearly $300 more was expended per locomotive, $12 more per passenger car, and $8 more per freight car. It will thus be apparent that the physical condition of the road was by no means stinted. In the aggregate maintenance outlays last year represented 32.8% of gross receipts, against 31.9% in 1913-14. A favourable feature was the saving in conducting transportation through the introduction of further economies in operation, the ratio to gross receipts having been 34.24%, against 35.25% in the previous year. The expenditures of last year compare with those for previous years as follows:—

Operating Expenses of the Chesapeake and Ohio Railway.

With unsurpassed activity in the iron and steel industries of the United States, and with export demands of great magnitude, the consumption of bituminous coal is now on a large scale, and the Chesapeake is securing an unprecedented amount of traffic. For the 14 weeks to October 7 gross earnings have expanded $1,261,000, or 12%. The latest detailed revenue statement for the two months to August shows that an expansion of $833,000, or 12%, in gross earnings, was accompanied by an increase of only $191,000, or 4% in expenses, thus leaving net earnings $642,000, or 31% higher than for 1914. Interest charges and taxes were a shade lower, and consequently the net profit was as much

as $652,000, or 119% in excess of that of a year ago. Practically the whole increase in expenses arose from heavier maintenance expenses, the outlays for this purpose having been raised by $175,000, or 8%. Conducting transportation costs were only $22,000, or but 1% more. In the aggregate the expenditure for the two months bore a proportion to gross receipts of 64.1%, against 69.2% in 1914. Some idea of the increasing skill with which the existing traffic is handled is evident from the ratio of transportation expenses, which for the two months was three points lower at 28.2%. If the results to August are any criterion of those for the 14 weeks the gain in profit so far secured this year is not far short of $1,000,000. Thus, apart from the further expansion looked for in the remaining period to June next, the profits for the current year amount to about $3,664,000, a sum sufficient to satisfy this year's Note agreement demands, with a balance equal to 1% on the stock. As we have said, still better results are looked for this year, but notwithstanding this it is improbable the Board will resume dividend payments just at present, and the surplus beyond the $3,000,000 needed for the trustee will be carried forward to ensure the prompt settlement of the larger payments to be made in the three years subsequent to June 1916. Indeed, it would appear to be politic to refrain from all dividend payments until such time as the whole of the $17,000,000 shall have been provided.

The low level of the freight rates which the Company obtains, and from which it derives its profits, is shown below:

Average Freight Rate and Haul of Chesapeake & Ohio Railway.

By means of the improved condition of the road and equipment continued progress was made last year in increasing the train load, which was raised by 4.1% to the high figure of 906 tons. The whole of this improvement was due to better car-loading. The successful introduction of economies is perhaps better indicated by a survey of freight-train working over the past decade. Since 1905 the units of freight traffic have increased 117%, but by adding no less than 63% to the average train-load the Company has needed to run only an additional 33% freight-train miles. The progress made in the economical handling of the freight traffic in recent years is shown below:—

Freight-Train Results, Chesapeake and Ohio Railway.

Through the sale of its interest in the Kanawha and Michigan Railway, which formed the connecting link between the Chesapeake and the Hocking Valley, over whose lines access to the Lakes is obtained, the Chesapeake has been placed somewhat at a disadvantage, but this is being rapidly remedied by the construction of a new connecting line. It is proposed eventually to construct a new link of 93 miles, but for the present, at any rate, only 30 miles are being built from Edgington, Ky., to Waverly, Ohio. At the latter point connection will be made with the Norfolk and Western over which trackage rights have been secured to a connection with the Hocking Valley at Columbus, Ohio. Upon its completion a year hence this new line will give the Chesapeake a much longer haul on coal destined for the Lakes than is obtained at present on coal delivered to the Kanawa and Michigan, and will very greatly enhance the profit on this business. The cost of constructing the new line, which will have very low grades in both directions, is estimated at $4,500,000, of which $4,087,000 is available from the proceeds of the sale of Kanawha stock to the Vanderbilt system.

In considering the value of Chesapeake stock account should be had rather of the intrinsic merits than of any temporary absence of dividends. Although it is possible no distribution may be made in the next few years, it should not be ignored that large profits are being earned and turned back into the road. The adoption of such a procedure, of course, has the dual advantage of keeping down the capital account and of increasing the equity of the stock, and when the final payment to the trustee comes to be made, we may expect to find the physical and financial condition of the property to have been so improved as to render the maintenance of steady dividends more assured than ever before. It has to be remembered that, despite past growth, the bituminous-coal industry of the United States is still only in its infancy, and that by reason of its proximity to tens of thousands of acres of coal lands as yet undeveloped, and the possession of a road with fewer curves and lower gradients than any other road shipping coal to tidewater, the business of the Chesapeake cannot fail to show marked growth as the years pass, apart altogether from the present abnormal conditions which the road is enjoying.

The amounts and prices of the Company's principal securities, together with the yields afforded, are appended:—

CANADIAN PACIFIC RAILWAY.

In dealing with the position and outlook of the Canadian Pacific in a recent issue we ventured to remark that the low ebb of traffic had practically passed, and that when the new crops came forward satisfactory improvements in earnings, both gross and net, would be secured. The crops of this year have been most bountiful, and are likely to be disposed of at relatively high prices, which should greatly increase the purchasing power of the agricultural community. At the same time all manufacturing plants in the Dominion are now busily engaged in turning out munitions of war, all of which should tend to the betterment of railway receipts. After a long spell of shrinkages in weekly traffics lasting, with one single exception, from the second week of December 1913 to the third week of September 1915, gains in gross receipts have commenced to be recorded, that for the last week of September having been $76,000 and for the first week of this month $642,000. For July gross earnings declined as much as $2,586,000 and net earnings decreased nearly $1,000,000, but in August a shrinkage of $1,117,000 in gross receipts was accompanied by a small improvement of $79,000

in net revenue. In September the decline in gross receipts was only $263,000, and when the full statement for the month comes to hand it will doubtless be found that a substantial expansion has occurred in net receipts for the month, which is likely to be continued in coming months. After the two years or so of depression the turn in the tide for Canada seems to have come at last, and for the various favourable factors in the outlook for the future we would commend the attention of our readers to the speech of the President of this Line, Sir Thomas Shaughnessy, at the recent annual meeting. Few men in Canada are better qualified to express an opinion as to conditions in the Dominion than Sir Thomas, and at the present time his remarks should be studied with more than usual interest.

CENTRAL URUGUAY RAILWAY.

HAVING regard to the untoward events of the past year the report of the Central Uruguay Railway is not unsatisfactory, although the set-back both in earnings and profits has undoubtedly been severe. In addition to the serious losses resulting from the commercial and financial disorganisation caused by the War, the Company suffered from the effects of heavy floods which occurred in the early months of the year, thereby rendering it doubly difficult to work with economy consistent with efficiency. With few exceptions an all-round decline in traffic has occurred, the principal decreases being in general goods, building materials, coal, and cereals. Cattle traffic shows considerable improvement, but the number of sheep carried declined by over 16%. The diminution in the total gross receipts was £75,700, or 11.6%, on the main line, and £156,500, or 14.2%, on the combined system, the Extension companies faring rather worse than the parent undertaking. By the exercise of rigid economy working expenses were curtailed by £60,000, or 9.6%, of which less than 50% is attributable to the main line. It is noteworthy that, despite the falling off in revenue, renewal, fund contributions are up to the average, 7% of the gross receipts having been debited to the working expenses and credited to the renewal funds. This represents a total of over £66,000, and of course helps to swell the proportionate cost of working, which, on the main line, has been raised from 58.89% to 61.67%. The decrease in net income is thus as much as £47,571, or 15.8%, and, as net revenue charges absorb some £15,290 more than in the preceding year, the decline in profit comes out at £62,861, or over 56%. Indeed, the sum available for the Ordinary amounts to only £3,791, as against £74,220, and no dividend is forthcoming, the balance carried forward being raised from £54,132 to £57,923. The income statement of the Company for the last five years is set out beneath:—

* These advances are repayable out of future surplus earnings of the Western Extension Railway.

Fortunately the outlook for the Company is much more promising. As the directors point out in their report, the products of the pastoral industry, the principal source of wealth of the country, have been in great demand at unprecedented prices, and this will materially assist towards the recovery of the financial position in Uruguay. Moreover, practically the whole of the last maize crop still remains to be carried, and it is expected that exportation will shortly commence. Wheat has been sown under most favourable conditions, and to a considerably greater extent than in the past. Cattle are in good condition, and the demand is such that exceedingly high prices continue to be paid. Unfortunately there have been considerable losses in sheep, and a further falling off in wool traffic is likely to be experienced. On the whole, however, the outlook appears to be satisfactory, and although the General Manager anticipates a somewhat heavy increase in this year's coal bill, the net results should come out considerably better than those for the year now under review. Since the beginning of July the traffic receipts of the main line have increased £30,050, whilst the improvement on the combined system amounts to as much as £54,575, or 27.7%. Here are the figures:—

Traffic Receipts, 15 Weeks to October 9.

	1915	1914	Increase	
	£	£	£	%
Main Line	154,106	124,056	+30,050	+24·2
Eastern Extension	49,555	35,679	+13,876	+38·8
Northern Extension	25,373	19,988	+ 5,385	+26·9
Western Extension	22,381	17,117	+ 5,264	+30·8
Total system	251,415	196,840	+54,575	+27·7

With this excellent start and the promise of still better things later on, the Company should be in a position this year to meet its increased expenses, and at the same time add appreciably to its profits. In gauging the intrinsic value of the Company's securities, sight should not be lost of the fact that the real earning power of the line is much greater than it appears, for if to last year's divisible surplus we add the sum of £66,000 allocated to special renewals, we arrive at a total profit for the year of £70,000, a sum equal to a dividend of 3½% on the Ordinary stock. As the Company is not likely to again experience such a combination of adverse circumstances as it encountered last year, the position of the undertaking may be regarded as sound, and its securities are more likely to appreciate in value then to further recede. The price of the Ordinary stock is about 60¼. The £10 5½% Preference shares can be obtained at about 7⅞, and allowing for accrued dividend the yield afforded is as high as £7¼ per cent. The Debenture issues of the Company are well secured, and at current quotations form attractive purchases. The capital of the undertaking is as follows:—

Central Uruguay Railway.

THE NORTHERN EXTENSION.

The gross earnings of the Northern Extension Company come out rather better than estimated in the preliminary returns, which showed a diminution of £30,630, whereas actually they were down only £29,279, or 24%. The decreased earnings are attributable to the unfavourable weather experienced during the early part of the year, as well as to the disorganised state of trade and business in Uruguay and the South of Brazil due to the European War. There was a considerable increase in the number of cattle carried, and, as the staple industries of the northern districts are pastoral, and extremely good prices have been realised, "estancieros" have

strengthened their financial position, and, with a return to normal conditions, increased progress may be anticipated. The net sum retained by the Company under agreement was £42,845, as against £59,390, but the loss thus shown was almost entirely made good by the Government guarantee, which produced £34,632, as against £18,360. The net income for the year is, therefore, practically unchanged; but owing to the higher income tax and an increase in miscellaneous charges, the profit for dividend is reduced by £6,395 to £35,903. This is barely sufficient to pay the dividend of 4%, and the balance carried forward is lowered from £4,578 to £2,814. The income statement of the Company for the last five years is appended:—

Carried forward ...	2,814	4,578	1,072	793	2,380

With regard to the immediate future, the General Manager, in his report dated August 21, states that cattle and camps are in a satisfactory condition, but there has been a considerable loss in sheep owing to the superabundance of grass and the sodden condition of the camps. A falling off in the quantity of wool produced in districts served by the railway must be expected, but the traffic derived from Brazil will depend greatly on the conditions offering in the markets of Montevideo and Rio Grande. The Company is now receiving considerable quantities of "yerba" from Brazil, and is in negotiation for the transport of timber, which is at present brought to Montevideo and Buenos Ayres by water from Atlantic ports in the State of Paraná. It will, of course, take some little time for the financial and commercial conditions in Uruguay to be thoroughly adjusted. At the same time it would appear that the corner has been turned, and that in the current year the Company should do at least as well as and possibly better than it did in the past twelve months. The price of the £10 shares has recovered to 4⅞, and on a 4% dividend basis the yield afforded is as high as £8 11*s.* 2*d.* per cent. The capital of the Company is as follows:—

Northern Extension.

Security	Amount	Interest	Price	Yield
	£	%	£	£ *s.* *d.*
Permanent 5% Debenture Stock	627,150	5	89¼	5 16 3
Ordinary shares (£10)	1,000,000	4	4⅞	8 11 2
Total capital	1,627,150			

THE EASTERN EXTENSION.

The gross earnings of the Eastern Extension Railway show a decrease of £37,596, or 16.2%, as compared with those of the preceding year, and, as the receipts per mile were proportionately less, the percentage retained by the Central Company under the working agreement was increased to 52.06%, as against 48.68% in 1913-14, thereby reducing the net earnings by £25,845, or 21.8%. Thanks, however, to the Government guarantee, the greater portion of this loss was regained, the total income for the year coming out at £130,612, as compared with £135,780. On the other hand, net revenue charges were £7,700 higher, and the profit for dividend is nearly £13,000 down at £19,751. The dividend of 2⅝% requires £21,446, and the balance carried forward is lowered from £3,238 to £1,543 only. Twelve months ago the dividend was 3¾%, and in 1911-12 as much as 5¾% was distributed. The income statement of the Company for the last five years is as follows:—

The large maize crop now awaiting transportation should help the Company considerably in the coming months, and, as the agricultural and pastoral outlook generally is very satisfactory, the improvement in earnings to date should continue. The price of the £10 shares is about £4 6*s.*, and the dividend of 2⅝% affords a yield of £6¼%.

The issued capital of the Company is as follows:—

Eastern Extension.

GREAT WESTERN OF BRAZIL.

The passing of the interim dividend on Great Western of Brazil Preferred and Ordinary shares in respect of the current year was a forgone conclusion having regard to the continued falling off in earnings and the low rate of exchange. The decrease in traffic receipts for the six months to June 30 was £89,000, or over 24%, the drop in exchange being mainly responsible. Since the beginning of July there has been a further diminution, and although some recovery has been shown in the last few weeks, the decrease in earnings to date is as much as £100,000, or 21%. The busy season in North-east Brazil is just commencing, and by comparison with last years exceedingly poor results the Company should continue to add to its weekly takings. Unfortunately the crops this year are backward, and the general opinion is that they will be considerably smaller than those of the past season, which were only moderately good. Prices, it is true, are high, but owing to the low exchange and high freights the benefit to planters and merchants is greatly nullified. It looks, therefore, as though any pronounced recovery in earnings is not likely to be experienced this year. On the other hand, greater economy of operation should be possible, as in the absence of floods, which last year were abnormally heavy, material savings will doubtless be effected in maintenance and renewal outlays as well as in transportation expenses. At the same time it is apparent that the Company has a difficult task to perform in order to again pay the full dividend on its 6% Preferred shares. Last year the profit available was £76,000, and the margin behind the dividend was thus only £16,000. Unless, therefore, there is a marked change for the better in the coming three months, it certainly looks as though the Company will be short of the sum needed to pay the Preferred dividend in full. It must, however, be recognised that the course of events at the moment is unprecedented, and that when peace is restored and matters again right themselves, as they must do sooner or later, the fortunes of the undertaking will quickly recover. The price of the £10 Preferred shares is 7⅛, and the last dealings in the Ordinary shares were at 4⅝.

GUARDIAN ASSURANCE COMPANY, LIMITED.

ANNUAL REPORT AND QUINQUENNIAL VALUATION.

THE most interesting feature in the statements submitted by the Guardian Assurance Company for 1914 relates to the quinquennial valuation of the life section at the close of that year.

New life policies were issued by the Company for £510,548, of which £31,000 was reassured, the net retention being £479,548, as compared with £624,112 in 1913. The diminution is not more than might have been expected considering the dislocation of business and the lessened demand for life assurance caused by the War. During the whole of the quinquennium ended December 31, 1914, the net new life business was greater by £360,092 than that of the preceding five years. Excluding the figures of the Westminster and General life office, which was absorbed by the Guardian in 1906, the total net life premium income in 1914 (increased by £794) amounted to £275,194, of which ordinary expenses of management, inclusive of commission, seem to have absorbed about 15.4%. The sum of £8,584 was received as consideration for new annuities purchased. Claims by death amounting to £227,114 are reported as having been below the expectation. Policies for £37,756 matured by survivance. In the Guardian life account the sum of £56,023 was written off for revaluation of securities, and the relative life fund at the close of the year amounted to £3,602,707, apart from investment reserve fund of £100,000. The interest yield for the year seems to have been about £4 2*s*. 5*d*. per cent., after deduction of income tax. For the whole of the last quinquennium the net interest yield is reported to have been £4 0*s*. 7*d*., as compared with £3 16*s*. 11*d*. per cent. per annum for the preceding five years. The Westminster life account for 1914 shows a premium income of £36,188 and a fund at the close of the year amounting to £707,427, apart from an investment reserve fund of £27,000.

The quinquennial valuation of the Guardian life section was made five years previously by the British Offices' O^{M} Table of Mortality, in combination with net premiums and 3% interest, special reserves being set aside for early payment of claims, expenses of limited and commuted premiums, unequal distribution of payment of premiums during the year, and for war risks. This basis is a strong one. It will be seen that the assumed rate of interest is £1 0*s*. 7*d*. per cent. per annum less than that actually earned during the quinquennial period. On the other hand, the margin of premiums reserved is greater by more than one-third than the expense ratio in 1914. On these lines the valuation discloses a surplus of £516,748. Of this £100,000 appertains to the investment reserve fund, whilst £80,000 is allotted to shareholders and £300,127 to participating policyholders, apart from £19,873 distributed as interim bonuses during the quinquennium, the total policyholders' profits for the period thus amounting to £320,000. The balance of £36,621 remaining in the surplus after this allocation is carried forward in the life assurance fund as unappropriated.

The system of division amongst the policyholders is described as based on an analysis of the sources whence the profits were derived, with the view of giving an equitable share to each policyholder in proportion to his contribution to the surplus. New reversionary additions were made of £450,743 in respect of the policyholders' share of the divided profits.

The resulting reversionary bonus additions per cent. per annum are as follows in some specimen cases.

Whole-of-Life Participating Policies.

Age at Entry	Duration of Policy 5 Years	10 Years	20 Years	30 Years	40 Years	50 Years
25	24/10	27/8	32/5	42/10	47/8	52/0
30	25/2	27/8	32/10	41/8	46/10	51/8
35	24/10	28/0	33/8	40/0	45/8	51/8
40	22/10	26/0	32/10	39/2	45/2	51/8
45	21/8	25/2	32/5	39/2	45/2	51/2
50	21/2	24/10	32/5	39/8	46/0	—
55	21/2	25/2	33/2	40/5	46/10	—
60	21/8	26/5	34/5	42/0	—	—

Endowment Assurances Payable at 60 or Previous Death.

Age at Entry	Duration of Policy 5 Years	10 Years	20 Years	30 Years	40 Years
20	29/2	32/0	37/8	43/8	50/0
25	26/0	29/2	36/0	42/10	—
30	24/0	27/8	35/2	43/8	—
35	23/2	27/8	36/10	—	—
40	26/2	31/8	42/10	—	—

These results are rather curious. The bonuses are of good average amount, but they wobbble in an unexpected manner, and the method of apportionment strikes an outsider as somewhat pedantic and old-fashioned. The public are becoming keenly interested in bonuses, and the majority seem to like a method of allotment that gives additions at a uniform rate for all durations of a policy, preferably on the compound principle. The system adopted by the Guardian seems rather to handicap its agents when trying to explain its effect, especially when the Guardian bonuses are compared with those on the popular system referred to, which has been adopted by so many of its contemporaries.

The Actuary points out that the two outstanding features of the quinquennium are the large profit from mortality and the depreciation in the value of the assets. The mortality profit is estimated as having been £158,301, which certainly proves that the lives have been carefully selected; and this has been more than sufficient to meet the loss from depreciation and the additions to the investment reserve, together amounting to £128,863. The bonuses to Guardian policyholders somewhat exceed those formerly declared on the average, and this is certainly a very satisfactory result, looking to the period of financial depression covered by the quinquennium.

Reference may now be made to the accounts for 1914 relating to the fire and accident business and to the shareholders' funds. The Company's fire insurance business was somewhat less profitable in that year than usual, in accordance with a widely general experience. The fire premiums, decreased by £20,365, amounted to £595,315. Net losses (£362,835)

absorbed about 61% of the premiums, and expenses and other charges (£219,468) about 37%. The reserve for unexpired risks was, however, diminished by £10,050 in consequence of the reduced premium income, and the fire trading profit seems to have amounted to £22,792, or to only about 3.8% of the premiums, which is less than half the corresponding percentage shown in 1913. Out of this surplus £15,935 was applied to writing off depreciation in securities, in addition to a net sum of £13,000 transferred from the investment reserve fund, and the balance of £6,857, together with net interest earnings of £31,648, was transferred to profit and loss account. Thereafter the fire fund at the close of the year amounted to £825,250, representing about 138% of the relative premium income, which is a strong departmental reserve.

The account relating to accident, burglary and general insurance indicates a higher proportionate profit. The relative premium income, increased by £3,521, amounted to £201,460, and the trading surplus seems to have been £32,734, or about 16.2% of the premiums. To this has to be added £9,852, representing the net interest earnings on the fund, producing together a total departmental profit of £42,586, which has been applied as follows: In writing off depreciation in securities, £9,531; added to general reserve fund, £3,500; transferred to profit and loss account, £29,555. The accident fund thereafter amounted to £207,394, or to about 103% of the premiums.

Premiums in the redemption assurance section amounted to £13,597. The quinquennial valuation of the relative fund showed a loss of £1,918, owing to depreciation in securities during the quinquennium, which has been met by a draft to that extent on the profit and loss account.

Interest earnings and fees in the profit and loss account, less tax, not credited to the departmental accounts produced £41,722, as against which there was a loss of £562 on investments realised. To the balance of £41,160 falls to be added £15,000 transferred from investment reserve fund, £38,505 transferred from the fire account, £29,555 transferred from the accident account, and £83,340 transferred from the life funds, as shareholders' quinquennial valuation profits (inclusive of £3,340 from the Westminster life account), less £1,918 transferred to redemption assurances account and £2,007 representing expenses not departmentally charged. The resulting balance of £203,635 is thus applied: In provision for a dividend at the same rate as in the former year, viz., 10% on the paid-up capital of £1,000,000 (the subscribed capital amounts to £2,000,000, so that £1,000,000 is uncalled), £100,000; to depreciation in securities written off, £45,286; in increasing balance of profit and loss account, after provision for dividend, by £58,349 to £89,777.

The Company's total assets on December 31, 1914, amounted to £7,370,442, the directors certifying that in their belief these assets were in the aggregate fully of the value stated in the balance sheet, less the investment reserve fund.

HARRISONS AND CROSFIELD, LTD.

The twelve months to June 30, 1915, have proved distinctly prosperous for this well-known and successful produce Company, and the total net profit is £18,033 greater than in the previous year. It is, of course, well known that the Company is very closely connected with the rubber industry, and the improvement in profits is regarded as an indication of the rather better times that the plantation rubber industry has enjoyed during the past twelve months. The Company's business is that of importers, planters, and distributors of tea in the English, foreign and Colonial markets of the world, general merchants, dealers in foreign and Colonial produce, and agents in London and the East; but, as already pointed out, the business is probably the best known at the present time by including the development, general management, and organisation of rubber and produce estates in all parts of the Middle East. At the annual meeting of the Company in 1914 a resolution was passed authorising the creation of 200,000 5½% Cumulative Preference shares, thereby bringing up the nominal capital to £1,007,500. The sanction of the Treasury having been obtained to the issue of 100,000 of such shares, these were offered to the shareholders in June last at par. Thereby the issued capital was brought up at June 30 last to £894,398, which sum was made up as follows:—

		£
500,000	£1 5½% Cumulative Pref. shares (fully paid)	500,000
100,000	„ „ „ (10s. paid)	49,692
300,000	£1 Preferred Ordinary (fully paid)	300,000
150,000	1s. Management shares (fully paid)	7,500
		857,192
	Calls on Cumulative Preference shares paid in advance	37,206
	Total	894,398

It may be added that the Preferred Ordinary shares rank after the Cumulative Preferred shares, and have a fixed Cumulative Preferential dividend of 5%. After an amount equal to the 5% paid on the Preferred Ordinary shares has been paid to the holder of the Management shares, the balance of the profits is divided equally between Preferred Ordinary and the Management shares until the former have received a further 5%, the ultimate surplus being divisible among the holders of the Management shares. The Preferred Ordinary shares have received their full 10% each year since the formation of the Company.

The net profit for the twelve months to June 30, 1915, has amounted to £152,302, as compared with £134,269 for the previous year. The Preference dividend has called for £27,500, the Preferred Ordinary dividend for £30,000, and the dividend on the Management shares for £37,500. There then remains a balance of £57,302, of which £50,488 have been set aside for various purposes, while the surplus of £6,814 has been added to the carry-forward, bringing it up to £42,344. The manner of distributing the profits is set out below:—

Profits of Messrs. Harrisons and Crosfield, Limited.

Carried forward	42,344	35,530	23,879	23,251	15,905	8,880	6,070

As against the total issued capital on June 30 last of £894,398, the balance sheet showed reserves of £281,000. The total assets were valued at £2,084,637, of which property, &c., stood at £360,217, while sundry stocks were valued at £338,568. The largest item of the assets is that of investments, which total £618,399. Last year the depreciation on the investments amounted to £58,286. The greater prosperity enjoyed by rubber companies of late is reflected in the statement that during the year the depreciation on the investments of Harrisons and Crosfield has been largely reduced, and on June 30 it only amounted to £22,573. The figures of the balance sheet as at June 30 last are appended.

The Company is providing for the control and management of between 150,000 and 200,000 acres of cultivation in the Middle East, principally under tea and rubber. As regards tea, Mr. C. Heath Clark, J.P., the Chairman of the Company, pointed out that for the first part of the present season the average prices are from 2*d.* to 3*d.* per pound higher than those of the corresponding period last year. But the continuance of these high prices throughout the present year are considered improbable, inasmuch as the weather during the present season has been exceptionally favourable for increased production, and it is fairly certain that India, Ceylon and Java will be in a position to largely increase their exports, and will together provide a greater surplus than has been had for some years.

As regards rubber, Mr. Heath Clark drew attention to the importance of rubber as regards our exports to America, and its assistance in adjusting the exchange with that country at the present time. He pointed out that the amount of rubber exported from the United Kingdom to the United States of America last year was valued at nearly £8,000,000, and if that going direct from the Middle East is added the total ranges between £10,000,000 and £11,000,000. In the first case it represents about one-sixth, and in the latter one-fifth of the total exports from this country to the United States of America. Rubber is two and a-half times the value of any other item in the list of our exports to America, and occupies the fourth place for value among the imports of the United States of America from the whole world. Probably about 70 millions of British capital is invested in the rubber industry in the Middle East, and although at the present time not more than about half of this large capital outlay is productive, it will return for the present year produce of the value of from 18 to 20 millions sterling. Mr. Heath Clark went on to say: "The development of the plantation rubber industry and the investment of this capital in the Middle East have also enabled this country and our Allies to have at their disposal and under their control by far the largest part of the world's supply of one of the things essential for carrying on the present struggle. The past year has served to place the industry in a still stronger position. For some years past I have asked your attention to the great reduction being effected in production costs, and last year I mentioned that, taking 10 companies that had reached the producing stage from among those under our care, there had been an average reduction of 6*d.* per pound in the cost of production on those estates. This year there has been over the same properties an average reduction of 4*d.* in the costs, making a total of 10*d.* per pound in two years. This reduction in costs will, I believe, still continue, although of necessity not to the same extent, but undoubtedly to the essential point to which we have always looked forward—that of making the plantations of the Middle East by far the cheapest, as well as the best, sources from which the world can draw its rubber supplies. This result is continuing to work itself out, and can be seen in the increase of the supplies from the Middle East, this year amounting to about 33%; and, on the other hand, the decrease in the supplies from all other sources this year probably amount to about 20%. The increased demand has continued to absorb the increasing supplies throughout the year, and at prices which for the first eight months are fully equal to the average price obtained for the whole of last year; while the larger output and reduced costs are giving a satisfactory increase in the profits of most producing companies. Prospects at the present time appear to indicate the continuance of an entirely satisfactory demand, capable of taking the increased production, at prices which will prove quite satisfactory to producing companies. I think, as a matter of fact, there is no reasonable doubt that the average price realised for the complete year 1915 will show a material advance on that for the complete previous year. We have a very strong market at the present time, with prices that are well ahead, probably amounting to at least 4*d.* a pound more than those ruling a year ago. So it looks as if the balance of this year should give a materially increased average price for the whole year. Therefore the producing companies will be in the fortunate position of improving their earnings both on the actual price of the produce and also from the very material reduction which has been [illegible] costs of production."

STAVELEY COAL AND IRON COMPANY.

Though the profits made by this Company for the past two years are not equal to those for the exceptionally good period experienced to June 1913, yet they represent a very considerable advance on those shown for some years previous to the abnormal time of 1913, and it is certainly satisfactory that the profits for the year to June 1915 are only some £18,000 less than for the previous year. The Company owns ironworks at Staveley and collieries in Derbyshire, Nottinghamshire, and Yorkshire. On the whole it has had quite a prosperous career, and the shareholders have received some substantial dividends. A somewhat wider interest has been taken in the Company's concerns during the past six years, inasmuch as in 1907 a reorganisation of the Company's capital took place. At that time the capital arrangements were somewhat complicated, and inasmuch as the directors had decided upon a policy of extensions, partly in the way of taking an interest in other companies and partly by means of the acquisition of additional land in order to maintain the output of the Company threatened by exhaustion of the older collieries, it was decided to reorganise and increase the capital. At June 30, 1907, out of an authorised share capital of £1,326,000, there had been issued £807,000. This was made up of 6,000 "A" shares of £100 each, of which £60 was paid up; 3,100 "B" shares of £100 each, of which £10 each was paid up; 6,000 "C" shares of £60 each, fully paid; 3,100 "D" shares of £10 each, fully paid; and 1,250 Five per Cent. Preference shares of £20 each; and as an indication of the confusing effect of so many classes of shares, it may be pointed out that for the year to June 30, 1907, the dividend was at the rate of £7 10*s.* per share on the "A" shares, £1 5*s.* per share on the "B" shares, £7 10*s.* on the "C" shares, and £1 5*s.* per share on the "D" shares. In order to place the Company in a better position to raise additional capital, it was decided to simplify the arrangements, and in place of the various classes of Ordinary shares to have merely Preference and Ordinary shares, though the Ordinary are of two classes, one of which is fully paid, while the other is only partly paid, and at the present time the capital consists of the following:—

		£
1,250	5% Preference shares of £20 each	25,000
782,000	Ordinary shares of £1 each, fully paid	782,000
391,000	Ordinary shares of £1 each, 15*s.* paid...	293,250
	Making a total of	1,100,250

In addition to which there are outstanding Debenture bonds to the amount of £198,300. The Debentures were only issued as lately as 1911.

For the twelve months to June 1913, the profits were, as stated, exceptionally large and reached a total of £349,995, as compared with £117,240 for the previous year. The consequence was that the dividend on the Ordinary shares rose from 10% to 25%. For the twelve months to June 1914 the profits fell to £278,854, which were more than double those for the year ending June 1912. The dividend was fixed at 12½%, and a sum of £75,000 was carried to reserve. Further, a sum of £94,198 was carried to suspense account in consequence of payments on account of trade with South America, India, Sweden, and elsewhere abroad being held up through the impossibility of getting the amounts transferred to England. For the twelve months to June last the profits have amounted to £260,835, the Ordinary dividend is maintained at 12½%, while a sum of £153,416 is set aside in connection with a decision to capitalise undivided profits. There then remains a balance of £12,329 to be carried forward. In the following statement we show the profits of the past six years and the manner of their distribution:—

Year ended June 30—	1915	1914	1913	1912	1911	1910

Carried forward ...	12,329	47,316	80,067	76,884	75,169	55,568

It is interesting to note the manner in which extensions have been made during recent years. In 1905 it was announced that, in conjunction with another company a subsidiary company with a nominal capital of £300,000 had been formed, to which each company contributed equally. It was formed for the purpose of developing and working the Barnsley bed of coal at Brodsworth, in the County of York, the area of coal being nearly 6,000 acres, and a sum of £20,000 was set aside from profits against the expenditure. Twelve months later it was announced that sinking operations had been commenced at Brodsworth and were preceeding satisfactorily. In the meantime it had been decided to erect new blast furnaces and by-product coke ovens plant at the Devonshire Colliery works. By September 1907 it was stated that 50 of the new coke ovens had been started in May and the remaining 50 in July, and that the whole of the ovens, together with by-product plant, were in active operation. The first of the three furnaces was blown in in July and the whole of the plant was working with satisfactory results. Sinking operations had been continued throughout the year at the Brodsworth Main Colliery, and it was hoped that the Barnsley bed would be reached before the end of the year. Moreover, in view of the rapid manner in which all the well-known and practically proved coalfields were being acquired, the directors entered into negotiations which resulted in the acquisition by the Company of a number of leases covering in all between 5,000 and 6,000 acres of the Barnsley bed of coal lying south-west of Doncaster, known as the Edlington Colliery. The name was subsequently changed to the Yorkshire Main Colliery. Coal was finally reached at Brodsworth in October 1907. In 1908 the second new furnace which it was decided to erect on the Devonshire site was blown in, and as the iron required could be manufactured much cheaper at the new furnaces, the old furnaces at Broad Oaks were shut down and dismantled. Owing to the financial requirements in connection with the Brodsworth Main Colliery development on the Yorkshire Main Colliery was not pushed at first, but during the early part of 1909 a more active policy was carried out with regard to this colliery. And to assist in meeting the expenditure on this work, it was decided to set aside £40,000 from the profits of the year to June 30, 1909. During the remainder of that year, and during the early part of 1910, sinking operations were pushed forward vigorously at the Yorkshire Main Colliery, and the Barnsley seam was reached at a deptth of about 905 yards in July 1911.

It was then announced that the directors had made agreements which not only increased the area of the coal which will be worked to the Yorkshire Main shafts, "but by exchanges of minerals very much improve and consolidate the coalfields as a whole from a mining point of view." It was also stated that the 100 patent coke ovens erected at the Devonshire works did not produce sufficient coke for the furnaces, and, consequently, it was decided to erect a further 50 ovens. The whole of the capital expenditure required in connection with the Yorkshire Main Colliery, Devonshire works, new coke ovens, &c., had been temporarily provided out of revenue, but it was then stated that arrangements would have to be made for a further Debenture issue to meet the expenditure, and accordingly, in November 1911 an issue of £150,000 of Four-and-a-Half per Cent. Debentures was made, which was principally taken up by the Company's shareholders. Herewith we set out a summary of the liabilities and assets as at June 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued capital	1,100,250	Properties, &c.	1,257,650
Deb. Bonds	198,973	Stocks	208,392
Sundry creditors	119,996	Sundry debtors	438,880
Reserves	245,828	Insurance fund invested in wagons	27,940
Suspense account	14,197	Cash in hand	89,372
Railway tolls, &c. ...	96,601		
Profit and loss	246,389		
	2,022,234		2,022,234

It is interesting to note that of the £94,198 carried to suspense account last year against foreign debts a sum of £80,000 is found to be in excess of what is now considered to be necessary to provide against the balance outstanding, and this amount has accordingly been transferred to reserve, bringing it up to £205,000. Attention is further drawn to the fact that the large growth of the Company's operations during recent years render it necessary to retain in the business the greater part of the undivided profits and capitalise them. It has, therefore, been decided to issue new shares to the Ordinary shareholders in the proportion of one new share for each three fully-paid shares, and one new share for each four shares on which 15*s.* has been paid. This will absorb 358,416 shares, and the shares so issued will be fully paid up, the amount required being provided by appropriating the reserve fund of £205,000 and £153,416 of the undivided profits. The issued Ordinary capital will accordingly be brought up to £1,140,416. At the same time it has been decided to increase the nominal capital to £2,500,000 by the creation of a further 1,302,000 new Ordinary shares. The £20 Preference share is quoted at 22½, giving a yield of about 4⅜%. The £1 Ordinary share fully paid is quoted at 2⅜, and on the basis of 12½% distribution the yield afforded is 5⅞%. The £1 share on which 15*s.* has been paid up stands at 34*s.* 6*d.*, and in this case the yield is about 6⅛%. Altogether in view of the considerable capital expenditure during recent years, there is reason to assume that the future will be of a satisfactory character, though the recent increase in working costs will probably make it a matter of some difficulty to maintain profits at the high level recently touched. We set out the present capital, prices, dividend, and yields afforded herewith:—

Amount	Description	Par	Price	Div.	Approx. Yield
£		£	£	%	£ s. d.
150,000	4½% Debentures	10		4½	
25,000	5% Preference Shares	20	22½	5	4 8 10
782,000	Ord. Shares £1 (fully paid) ...	1	2⅜	12½*	5 18 5
293,250	Ord. Shares £1 (15/- paid) ...	15/-	34/6	12½*	6 2 0

Commercial.

THE WHEAT POSITION.

Sound English wheat is now worth 50*s*. per quarter, while red winter wheat of the new American crop is about half a crown dearer, the mean quality being about the same. Of the 8*s*. per quarter or thereabouts which freight with sea and war insurance are now costing, the American producer seemingly pays 5*s*. 6*d*. to secure the English outlet for his surplus, while the English consumer pays 2*s*. 6*d*. as a species of fine for neglecting his home agriculture. The price of 60*s*. paid for some old Canadian by millers who want a little of it for mixing purposes has been trumpeted in certain quarters; but these mild miscalculations will always, while human nature is liable to err, be recurrent. Their effect is never important and the normal values soon return. Canadian wheat for November delivery is quoted at 50*s*., and as its intrinsic value is quite 3*s*. above average English the coming crisis is really in the direction of maintaining the home product at a price encouraging the farmers to extend its culture. At the time of writing the actual sowings are going on with a good deal of briskness, and Lord Selborne's appeal to the patriotism of the agriculturist will not, we believe, be thrown away on the class.

The purely commercial side of things is also encouraging if we take a fairly long view. A period of comparative cheapness in December and January may quite conceivably follow on certain events of which we shall speak, but the fact that there are buyers of Californian new crop for prompt shipment at 55*s*. per quarter is significant. Owing to the profit being dependent on the cheap freight of sailing ships this wheat will not be here before February, and the price paid therefore carries us far more into the future than the New York sales for December delivery of red winter wheat, which, as the buyer will not be compelled to take the grain, are rightly treated as speculative.

There has been for the past month a ding-dong battle between "bulls" and "bears" on the New York Wheat Exchange, prices ranging 16 cents per bushel, which is 5*s*. 4*d*. on our Government quarter of 480 lb. The British markets have been singularly little concerned. For one thing, affairs of grave moment occupy the public mind, and for another, there are those events which seem ahead of us in the trade itself, and of which we have spoken as likely to entail important consequences.

The United States operators may vary between themselves as to whether they will let Great Britain have wheat at 45*s*. or stand out for 50*s*. for December delivery. New York or Chicago may cable, and without exaggeration, remarkable scenes when a "bear" or a "bull" loses confidence, and by cutting short his losses causes a market price change of a shilling per quarter in a single day on an exchange which meets daily. But in the meanwhile Canada has succeeded in harvesting in excellent weather and with scarcely any losses by frost a wheat crop which out of six export grades is grading seldom lower than No. 2. Now the surplus available for exportation is put at the remarkable total of 23 millions milling and one million poultry wheat, and Canada is accustomed to look first and last to the U.K. as the buyer of its breadstuffs. Shipping is scarce, most of it is British, and it is not impossible that contracts for Canadian wheat exports in November, December and January may be so large as to relegate the winter wheat of the United States to a subsidiary position. The French and Italian wheat buyers might prefer the American product, but that would not particularly concern our markets, which are aware that 10 million quarters are required for the Latin countries and make all their calculations on the hypothesis that the grain will reach the French and Italian buyers in due course.

The other event is the magnificent wheat promise in that most variable of wheat producers, Australia. Spurred by patriotism and, as we hear, some really eloquent speeches of local statesmen, the Australian farmer largely increased his wheat sowings as the right thing to do in war time. On the grain so sown Nature has smiled from the first, and now, within a few weeks of commencing harvest in the North, of course the warmest region under the Equator, the likelihood of a record crop is overwhelming. The area would suffice for that with an average yield per acre, and the more conservative estimates reckon that fully two bushels per acre over an average will be secured. Now Australia is as purely non-speculative as Great Britain itself. We speak of wheat growers. The crop harvested in November and December will begin to be shipped freely quite early in January, and exports will be in full flow in February. This is the uniform experience of good years. Wheat so shipped will come largely by steamers, and therefore will not linger, as does the Californian fleet. By April Australia will be saying words of weight at Mark Lane.

It is clear that the wheat position is in no way discouraging to the consumer. On the other hand, there is, happily, little reason to doubt that the British grower will be able to sell every sack of 1915 produce at a remunerative price. If he is content to watch

his market, to abstain from the exchanges in crowded weeks when big cargoes are freshly in from abroad, and to deliver in the intervals of short oversea supply, he should not need to take a penny less than Lord Milner's "45*s.* per 480 lb." for his average samples, and he should get quite 50*s.* per 504 lb. for anything attaining that natural weight.

Reckoning a saleable surplus of 8½ million quarters and the price at 45*s.*, we have a figure well on the right side of 19 millions sterling, whereas in the bad years of a recent past the home producer has had to put up with sales of 6 million quarters and only get 9 millions sterling (30*s.* per quarter average) for them. Reckoning that the wheat grower must make 10 millions to pay his way in peace, and that the War has put things up 25%, notably labour and machinery, we still have the position restored to one of healthy, though by no means abnormal, profit on the skilled labour and capital incurred.

The following tables will serve briefly to show the home and oversea equations of wheat supply and demand respectively:—

I.—*The Home Position.*

		Quarters.
Estimated needs:	Seed	500,000
,, ,,	Mills	33,000,000
,, ,,	Taihnes	500,000
,, ,,	Total	34,000,000
Home yield		9,500,000
Import needs		24,500,000

II.—*The Oversea Position: Exporters.*

		Quarters.
Canada,	Milling wheat	23,000,000
	Poultry ,,	1,000,000
U.S.A.	Milling wheat	40,000,000
	Poultry ,,	2,000,000
Australia,	Milling wheat	10,000,000
Argentina	,, ,,	5,000,000
India	,, ,, (Unsold surplus of April crops)	3,500,000
North Africa, Persia, Chile, &c.		1,000,000
Exportable surplus		84,500,000

Of this total of 84½ millions it is probable that 3 millions will go to the relief of the trade in feeding-stuffs, as high prices are now bid (40*s.* per 448 lb.) for poultry wheat. America, too, has more than usual of inferior corn. The milling surplus therefore stands at 81,500,000 quarters.

III.—*The Oversea Position: Importers.*

	Quarters.
France (official statement of need)	7,000,000
Italy	3,000,000
Holland and Belgium	8,000,000
Scandinavia	3,000,000
Switzerland	2,000,000
China, &c.	5,000,000
Tropical America and Brazil	3,000,000
South Africa	500,000
Import needs	29,500,000

This leaves an unsold surplus of 52,000,000 quarters, out of which the United Kingdom will presumably need 24,500,000 quarters. That out of a world production of 500,000,000 qrs., 27,500,000 qrs. should be in hand is no more than a safety margin. At the same time, it appears to assure to British buyers a command of the markets sufficient to prevent any "corners," "rings" or speculative manipulations having any serious chance of even a brief success.

The *London Grain, Seed and Oil Reporter* gave a preliminary estimate of the world's wheat crop of 1915, the detail of which we published in THE STATIST of August 14. This authority now slightly revises its estimate, and the new aggregates are as set out below:—

The Wheat Crop of the World.

(In Quarters of 480 lb., 000's omitted.)

Total for Europe ...	265,150	242,600	281,900	251,450	237,150	253,300
Total out of Europe	252,600	209,700	212,700	211,100	198,600	190,000
Grand total... ...	517,750	452,300	494,650	462,550	435,750	443,300

Those of our readers who desire to refer to the detail of the different countries will find it at page 263 of THE STATIST of August 14 last. The *Reporter* has considered its figures anew with the knowledge of the now harvested spring wheat crops of the United States and Canada, but the latest aggregate estimate agrees "very closely with the preliminary one, although there are a fair number of changes in the individual totals for the different countries. In Russia, for instance, owing to the unfavourable weather experienced for the completion of the harvest, a certain amount of damage was done, and we have reduced the estimated yield by 5 million quarters. In America, where the yield is officially put at 125 million quarters, including 43 million quarters of spring wheat, the weather was so bad for harvesting winter wheat that much of this description was rendered unfit for human food, and a reduction of 10 million quarters from the official figure is allowed for. In Canada the season has been so favourable that the official estimate is for a yield of 38½ million quarters. In all probability this is too optimistic a figure, as a fair amount of damage was done by frosts to the late portion of the crops, and we have allowed for a reduction of 3½ million quarters. In Australia there was a very large increase in the acreage sown, and, in addition, the season has been an exceptionally favourable one up to the present time; the principal danger now to be feared is great heat at harvest time accompanied by hot winds. In Argentina up to a few weeks ago certain important districts were badly in want of moisture; but good rains have since fallen everywhere, and latest cables advise the crop outlook, on an increased area, as quite satisfactory. Agricultural prospects in India are also reported to be favourable almost everywhere, thanks to good rains, and the acreage, in all probability, will be equal to last year's."

COAL AND STEEL.

IN the Scottish coal trade there is an improved tone, due to seasonal requirements. At the same time the demand is by no means up to expectation, and though the increased call for supplies has brightened up the rather depressed export market a little, business cannot be called brisk. Tonnage is still scarce, owing to the requirements for war purposes, and, in consequence, freights continue to increase. The Serbian campaign is likely to reduce the tonnage still further—a fact which will naturally tend to raise freights still higher and add to the present difficulties of export. A few licences have been granted for export to Sweden, but as they are of a special character they cannot be regarded as indicative of a relaxation of the prohibition of export to that country.

It is regarded as probable that the comparatively small export of steel which has gone out of Scotland at intervals during the past year will shortly cease altogether owing to the peremptory demands of the Government. Deliveries have been running behind, and it is an open secret that further delay will not be tolerated. It is pointed out that exports are of great importance in the provision of financial support for the nation, but makers have been informed that the provision of steel for military purposes is of still greater importance. This rejoinder is taken to indicate the determination of the authorities not to tolerate further delay in deliveries by reason of ordinary business.

Meanwhile, as has already been pointed out, there are mills in the West of Scotland lying idle for want of workers. Fortunately the United States is also unable to cultivate its export business in view of the Governmental orders with which that country is fully occupied. Deliveries of United States billets and sheet bars for this country are greatly delayed, and it is therefore inconceivable that orders which have had to be refused by Scottish makers can be dealt with in the United States.

***For observations as to the cotton position see page 129.

VATADERIA RUBBER AND TEA CO.—Interim dividend of 5 , less tax.

UNION PACIFIC RAILROAD.

EXTRACTS FROM EIGHTEENTH ANNUAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 1915.

NEW YORK, September 9, 1915.

To the Stockholders of the Union Pacific Railroad Company:

The Board of Directors submit the following report of the operations and affairs of the Union Pacific Railroad Company for the fiscal year ended June 30, 1915, *including* the Oregon Short Line Railroad Company, *whose entire capital stock is owned by the Union Pacific Railroad Company*, and the Oregon-Washington Railroad and Navigation Company, *whose entire capital stock is owned by the Oregon Short Line Railroad Company*. For convenience, the three Companies are designated by the term "UNION PACIFIC SYSTEM."

TRANSPORTATION OPERATIONS.

The transportation operations this year compared with those of last year, were as follows:

	1915	*1914	Increase	Decrease	Per Cent.
Average miles of road operated	7,784.29	7,597.12	187.17	—	2.5
OPERATING REVENUES.					
Freight revenue	$59,136,841 47	$62,407,762 44	—	$3,270,920 97	5.2
Passenger revenue	18,748,558 82	20,540,076 56	—	1,791,517 74	8.7
Mail revenue	3,766,274 86	3,030,065 07	$736,209 79	—	24.3
Express revenue	1,997,973 96	2,120,657 54	—	122,683 58	5.8
Other passenger-train revenue	1,210,582 81	1,325,792 10	—	115,209 29	8.7
Other train revenue	125,930 55	237,839 50	—	111,908 95	47.1
Switching revenue	451,663 86	534,842 02	—	83,178 96	15.6
Water line revenue	187,681 74	218,732 15	—	31,050 41	14.2
Other revenue	1,332,787 15	1,429,536 84	—	96,749 69	6.8
Total operating revenues	$86,958,295 22	$91,845,305 02	—	$4,887,009 80	5.3
OPERATING EXPENSES.					
Maintenance of way and structures	$10,900,925 31	$10,872,882 23	$28,043 08	—	.3
Maintenance of equipment	12,101,211 66	12,517,154 42	—	$415,942 76	3.3
Total maintenance	$23,002,136 97	$23,390,036 65	—	$387,899 68	1.7
Traffic expenses	2,061,971 28	2,123,140 35	—	61,169 07	2.9
Transportation expenses—rail line	22,962,551 83	25,351,999 12	—	2,389,447 29	9.4
Transportation expenses—water line	145,589 44	174,805 28	—	29,215 84	16.7
Miscellaneous operations expenses	1,313,188 94	1,484,607 05	—	171,418 11	11.5
General expenses	2,811,418 51	2,885,662 95	—	74,244 44	2.6
Transportation for investment—Credit	*160,142 06*	*270,027 55*	$109,885 49		40.7
Total operating expenses	$52,136,714 91	$55,140 223 85	—	$3,003,508 94	5.4
Revenues over expenses	$34,821,580 31	$36,705,081 17	—	$1.883 500 86	5·1
Taxes	4,641,474 25	5,078,866 99	—	437,392 74	8.6
Net operating income	$30,180,106 06	$31,626,214 18	—	$1,446,108 12	4.6
FREIGHT TRAFFIC (COMMERCIAL FREIGHT ONLY).					
Tons of revenue freight carried	16,791,412	17,155,390	—	363 978	2.1
Ton miles, revenue freight	6,001,739,197	6,168,799,317	—	167,060,120	2.7
Average revenue per ton mile (cents)	.968	.978	—	.010	1.0
Average distance hauled per ton (miles)	357.43	359.58	—	2.15	.6
Average revenue tons per revenue freight-train mile	441.73	430.12	11 61	—	2.7
Average revenue per revenue freight-train mile	$4 21	$4 19	$0 02	—	.5

Average revenue per passenger mile (cents)	2.209	2.282	—	.073	3.2
Average distance hauled per passenger (miles)	103.35	103.83	—	.48	.5
Average passengers per passenger-train mile	57.91	58.78	—	·87	1.5
Average revenue per passenger-train mile, passengers only	$1 28	$1 34	—	$0 06	4.5
Average total passenger-train revenue per passenger-train mile	$1 66	$1 66	—	—	—

* Wherever necessary for comparative purposes, last year's figures have been restated to conform with revised classifications of the Interstate Commerce Commission, effective July 1, 1914.

MAINTENANCE OF WAY AND STRUCTURES.

For convenience, Operating Expenses are stated in the following condensed form:

	1915	1914	Increase	Decrease	Per Cent
Average miles of track operated—first and additional main tracks	8,881.00	8,623.20	257.80	—	3.0
Superintendence	$685,429 58	$788,788 67	—	$103,359 09	13.1
Roadway and track—Ordinary	4,230,772 29	4,286,213 33	—	55,441 04	1.3
Extraordinary repairs of roadway and track	337,505 32	250,854 66	$86,650 66	—	34.5
Tunnels, bridges and elevated structures	777,763 07	652,107 63	125,655 44	—	19.3
Ties	1,726,605 07	1,739,885 12	—	13,280 05	.8
Rails	560,766 41	338,732 66	222,033 75	—	65.6
Other track material	498,889 10	485,013 89	13,875 21	—	2.9
Ballast	112,032 45	65,870 80	46,161 65	—	70.1
Fences, crossings and signs	251,229 12	235,611 12	15,618 00	—	6.6
Buildings and other structures	1,056,525 95	1,113,217 62	—	56,691 67	5.1
Signals and telegraph lines	311,172 53	354,044 70	—	42,872 17	12.1
Removing snow, ice and sand	192,813 86	209,564 80	—	16,750 94	8.0
Paving and assessments for public improvements	8,013 59	101,979 98	—	93,966 39	92 1
Roadway tools and supplies	229,499 11	264 017 65	—	34.518 54	13.1
Miscellaneous	149,377 23	151,861 57	—	2,484 34	1.6

INCOME ACCOUNT.

The income account for this year, compared with last year, after excluding all offsetting accounts between the Union Pacific Railroad Co.; Oregon Short Line Railroad Co., and Oregon-Washington Railroad and Navigation Co., is as follows:—

	1915	1914*	Inc. or Dec.
OPERATING INCOME.			
Operating revenues	$86,958,295 22	$91,845,505 02	—$4,887,009 80
Operating expenses (excluding depreciation and retirements)	$49,414,179 01	$52,760,863 36	—$3,346,684 35
Depreciation and retirements	2,722,535 90	2,379,360 49	+ 343,175 41
Total Operating Expenses	$52,136,714 91	$55,140,223 85	—$3,003,508 94
Revenues over expenses	$34,821,580 31	$36,705,081 17	— $1,883,500 86
Taxes	4,641,474 25	5,078,866 99	— 437,392 74
Operating Income	$30,180,106 06	$31,626,214 18	— $1,446,108 12
OTHER INCOME.			
Dividends on stocks owned	$4,540,094 50	$9,258,793 75	—$4,718,699 25
Interest on bonds and notes owned	6,434,507 84	3,858,172 14	+ 2,576,335 70
Interest on loans and open accounts—balance	988,977 82	3,234,958 13	— 2,245,980 31
Hire of equipment—balance	105,661 05	†	+ 105,661 05
Rents from use of road	71,331 86	72,949 68	— 1,617 82
Rents from use of joint tracks, yards, and terminal facilities	959,779 75	792,004 64	+ 167,775 11
Miscellaneous rents	51,923 99	101,224 81	— 49,300 82
Miscellaneous income	152,884 35	117,616 13	+ 35,268 22
Total Other Income	$13,303,161 16	$17,435,719 28	—$4,132,558 12
TOTAL INCOME	$43,483,267 22	$49,061,933 46	—$5,578,666 24
FIXED AND OTHER CHARGES.			
Interest on funded debt	$13,803,926 08	$14,062,107 82	— $258,181 74
Hire of equipment—balance	†	771,886 17	— 771,886 17
Rents for use of joint tracks, yards, and terminal facilities	1,150,177 13	982,864 51	+ 167,312 62
Miscellaneous rents	4,212 06	121,890 60	— 117,678 54
Miscellaneous charges	120,592 70	17,267 31	+ 103,325 39
Total Fixed and Other Charges	$15,078,907 97	$15,956,016 41	— $877,108 44
NET INCOME	$28,404,359 25	$33,105,917 05	—$4,701,557 80
DISPOSITION OF NET INCOME.			
SINKING FUND REQUIREMENTS	$11,800 00	$11,973 33	— $173 33
DIVIDENDS ON STOCK OF UNION PACIFIC RAILROAD CO.:			
Preferred stock at 4 per cent.	3,981,740 00	3,981,740 00	—
Common stock at 8 per cent. this year, and 10 per cent. per annum for six months and 8 per cent. per annum for six months last year, making an average for last year of 9 per cent.	17,783,328 00	19,780,777 74	— 1,997,449 74
APPROPRIATED TO COVER THE COST OF CERTAIN ADDITIONS AND BETTERMENTS MADE DURING THE YEAR	1,083,458 89	—	+ 1,083,458 89
TOTAL APPROPRIATIONS OF INCOME	$22,860,326 89	$23,774,491 07	— $914,164 18
SURPLUS, TRANSFERRED TO PROFIT AND LOSS	$5,544,032 36	$9,331,425 98	—$3,787,393 62

* Wherever necessary for comparative purposes, last year's figures have been restated to conform with revised classification of the Interstate Commerce Commission, effective July 1, 1914.

† "Hire of equipment—balance" was a debit last year and is reported under "Fixed and Other Charges," whereas this year it is a credit and is reported under "Other Income."

Grand Total	$862,095,808 92	$924,540,015 06	— $62,444,206 14

* Wherever necessary for comparative purposes, last year's figures have been restated to conform with revised classification of the Interstate Commerce commission, effective July 1, 1914.

The increase in "Investment in Road and Equipment," as reported in General Balance Sheet, is made up as follows:		
Extensions and Branches		$2,847,914 73
Additions and Betterments, existing Equipment		3,460,198 45
Equipment		17,991,815 48
Total		$24,299,928 66
Less		
Property retired from service and not to be replaced (the cost of which, less salvage, has been charged to Profit and Loss, in conformity with regulations of Interstate Commerce Commission):		
Sidings and spur tracks	$55,203 69	
Buildings and structures	81,029 41	
Shop machinery and tools	15,706 94	
Total	$151,940 04	
Equipment retired from service:		
7 Locomotive	$65,564 90	
27 Passenger-train cars	148,442 48	
1,562 Freight-train cars	787,402 07	
725 Work equipment	206,208 60	
Total	1,207,578 05	
Expenditures in connection with projected lines, the construction of which was abandoned and the amount, less salvage written off by charging "Profit and Loss"	431,123 70	
Amount received from the Trustee of the Union Pacific Railroad Co., First Railroad and Land Grant Four Per Cent. Mortgage in payment for expenditures for additions, betterments, and equipment	680,000 00	
Cost of property sold to Southern Pacific Company being one-half interest in Willamette River bridge, Portland, Oregon, together with electric machinery and approaches thereto	1,042,637 43	
Cost of real estate sold	28,664 96	
Total		3,541,914 18
Increase in "Investment in Road and Equipment" during year		$20,757,984 48
Adjustments necessary to conform with revised classification of Interstate Commerce Commission effective July 1, 1914:		
Add		
Purchase price of real estate at Portland and Albina, Oregon, held under contract for purchase since June, 1890, not heretofore taken into account, and cost of improvements thereon, now taken into account to conform with revised classification of the Interstate Commerce Commission. No payment has been made on account of the purchase price, which is reported in General Balance Sheet, as a Deferred Liability	$1,999,564 90	
Deduct		
Cost of real estate heretofore included in "Investment in Road and Equipment" now transferred to "Miscellaneous Physical Property" in accordance with revised classification of Interstate Commerce Commission effective July 1, 1914	$315,724 06	
Expenditures for surveys and projected lines heretofore included in "Investment in Road and Equipment" now transferred to "Other Unadjusted Debits" in accordance with revised classification of Interstate Commerce Commission effective July 1, 1914	350,185 25	
Miscellaneous adjustments	2,026 25	
Total	$667,935 56	
Net additions in adjustments		1,331,629 34
Net increase in "Investment in Road and Equipment"		$22,089,613 82

INCOME ACCOUNT.

The decrease in Operating Revenues of $4,887,609, equal to 5·3 per cent., is due to the general business depression which prevailed throughout the year. This loss in revenue, however, is substantially offset by reducing Operating Expenses $3,003,508, equal to 5·4 per cent., which was effected principally in Transportation Expenses, in which there was a decrease of $2,418,663, equal to 9.6 per cent. At the outset of the business depression it was resolved to continue, without any modification, the policy of maintaining the property fully up to its high standard, and, consequently, the expenditures for Maintenance of Way and Structures were substantially the same this year as last year, there being an increase of $28,043, or ·3 per cent., while expenditures for Maintenance of Equipment decreased only $415,942, or 3·3 per cent.

The decrease of $4,718,699 in Dividends on Stocks Owned is due principally to a decrease of $3,287,992 in dividends on Baltimore & Ohio stock, which resulted from distributing $26,674,008 par value Preferred and $50,013,765 par value Common stock of the Baltimore & Ohio Railroad Company in part payment of extra dividend declared by the Union Pacific Railroad Company January 8, 1914, payable to stockholders of record March 2, 1914, and to a decrease of $979,307, being the amount of dividend accrued on the stock of Southern Pacific Company between July 1 and September 2, 1913, when it was sold.

The increase of $2,576,335 in Interest on Bonds and Notes Owned offsets the decrease of $2,245,980 in Interest on Loans and Open Accounts, and results from additional investments in bonds and notes made during the year.

The decrease in Fixed and Other Charges is due principally to a decrease of $258,181 in Interest on Funded Debt, resulting from the conversion, at the time of the extra dividend, of $9,009,975 face value of Union Pacific Railroad Company Twenty-Year Four per Cent. Convertible Bonds, and to a decrease of $771,886 in debit balance to Hire of Equipment.

APPROPRIATION OF INCOME FOR ADDITIONS AND BETTERMENTS.

Of the expenditures made during the year for Additions and Betterments, amounting (exclusive of equipment) to $3,460,198·45, and $34,566·84 for improvements to existing Equipment, there were items aggregating $1,083,458·89 which it was believed, in view of the condition of the Company, should be charged against the current income.

Each improvement was carefully considered in determining whether the cost should be paid for out of current income, or be capitalised, and its character and special circumstances, rather than any general rule, governed the decision.

Under the existing accounting regulations of the Interstate Commerce Commission, all of these expenditures had to be charged to Investment in Road and Equipment account, rather than to Operating Expenses, or direct to Income. Hence it was necessary, while deducting the amount from Income, to set it up as Appropriated Corporate Surplus, as shown in General Balance Sheet.

Pending the entry of a Decree terminating the court proceeding in which the Southern Pacific stock was disposed of, and the consequent ascertainment of the remaining cost and expenses, the credit balance on account of this transaction, which on June 30, 1915, amounted to $16,130,150.10, is reported in General Balance Sheet under the head of "Unadjusted Credits."

By Order of the Board of Directors,

ROBERT S. LOVETT,
Chairman of the Executive Committee.

AMERICAN COTTON.

LIVERPOOL: Thursday.

OUR market continues very feverish and active, with exceptionally wide fluctuations and changes of tone, but during the fortnight prices have advanced about 36 points for American and 20 for Egyptian, to-night's closing rates being January-February delivery American 7.10*d*., and January delivery Egyptian 10.21*d*.

The Washington Bureau report up to the end of September was issued early last week, and fully bore out the pessimistic private advices which had been cabled previously to this side. The average condition was given as 60.8, which was several points lower than anticipated. The official estimate of the yield is 10,900,000 bales. Since the Bureau report was issued further unfavourable crop reports are to hand, and some very sensational predictions as to the size of the crop have been received. In consequence, "bullish" views have become fashionable, and a "bull" campaign is in full swing in America. In this market the speculative interest as distinguished from more legitimate trade operations is very moderate in extent. Shorts are mostly covered, and people are not sanguine enough to commence buying at the present high level.

Some very exggerated estimates of consumption have been put forward, and it goes without saying that if we accept the views of some authorities that fully 15,000,000 bales will be consumed, and that the crop is under 11,000,000 bales, even the large carry-over from last season would leave us bare of supplies next autumn. But we see no justification for supposing that 15,000,000 bales, or anything like this amount, of American cotton will be used. The War will prevent cotton from being spun in the North of France, Belgium, Germany, Austria, and Poland, and the mills in these districts being idle represents a diminution in consumption of from 2,000,000 to 3,000,000 bales. The recent extension of hostilities in the Balkans cuts off a large market for cotton goods. Against all this we have to offset a large increase in the American consumption, which in the current season is likely to exceed 6,000,000 bales. Altogether we figure the world's probable consumption of American cotton to be—

	Bales.
United States	6,500,000
Great Britain	3,000,000
Continent and elsewhere ...	2,500,000
	12,000,000

This year's crop at 11,000,000 bales with last season's carry-over of about 4,000,000 (visible and invisible) would leave us with a surplus of about 3,000,000 bales at the end of the season.

We have not included in the above estimate for consumption any use of cotton for munitions. Our information is that no appreciable quantity of cotton is being used for this purpose. Up to the present ample supplies of what is made into gun-cotton are available in the shape of linters and waste, and while these can be obtained—and these are quite, if not more, suitable for the purpose than cotton—there is no reason why anyone should buy the dearer article. If the supply of linters and waste in Germany were to fail, she would no doubt be driven to use cotton; but she cannot now import cotton—in fact, her supplies are so reduced that it has been announced that her mills have had to shut down for want of the raw material.

On the spot a fair business has been transacted, though the volume has contracted a little. There is a marked stiffening in the selling basis of the better qualities with staple. Merchants find they cannot replace their sales by purchases in America; in many cases the "c.i.f." prices in America are over the warehouse prices here. The disappearance of the holding premium in futures is adding to the perplexities of the importer, who can only do business by paying an extremely stiff price in America, and if he is unable to sell promptly on arrival here he will find himself incurring a very heavy holding charge, which may soon more than absorb any profit in the transaction.

THE KANSAS CITY SOUTHERN RAILWAY.

FIFTEENTH ANNUAL REPORT—FOR THE FISCAL YEAR ENDED JUNE 30, 1915.

Kansas City, Mo., September 15, 1915.

To the Stockholders of the Kansas City Southern Railway Co.:

The fifteenth annual report of the affairs of your Company, being for the year ended June 30, 1915, is herewith presented.

MILES OF RAILROAD.

The Track Mileage of your Company at the end of the fiscal year was as below stated :—

Main Line	777.13 miles
Branches	45.86 ,,
Yard, Terminal and Side Tracks	424.20 ,,
Second Track	17.77 ,,
Total owned or controlled	1,264.96 miles
Operated under Trackage Rights	23.76 ,,
Operated under Lease	4.92 ,,
Total Miles in System	1,293.64 miles

In addition to its railroad property, rights of way, real estate, buildings, equipment, appurtenances, &c., the Company controls, by virtue of its ownership of securities, all the property of the following corporations, viz. :—

The Arkansas Western Ry Co.—A standard-gauge line from Heavener, Oklahoma, to Waldron, Arkansas, 32.33 miles, together with rights of way, buildings, appurtenances, &c., controlled by your Company through ownership of all the capital stock and bonds.

The Poteau Valley RR. Co.—A standard-gauge line from Shady Point, Oklahoma, to Calhoun, Oklahoma, 6.59 miles, together with rights of way, buildings, appurtenances, &c., controlled by your Company through ownership of all the capital stock.

The Kansas City, Shreveport and Gulf Terminal Co.—Union depôt property at Shreveport, Louisiana, including its real estate, buildings, and 1.16 miles of yard and terminal track, controlled by your Company through ownership of all the capital stock.

Port Arthur Canal and Dock Co.—Lands, slips, docks, wharves, warehouses, one grain elevator (capacity 500,000 bushels), &c., all at Port Arthur, Texas; controlled by your Company through ownership of all the capital stock and bonds.

The K. C. S. Elevator Co.—One first-class elevator, of capacity 650,000 bushels, situated at Kansas City, Missouri; controlled by your Company through ownership of all the capital stock.

The Mena Land and Improvement Co.—A Company formed for taking title to real estate at Mena, Arkansas, vacated by employees in consequence of the establishment of new division terminals at Heavener, Oklahoma, and DeQueen, Arkansas; controlled by your Company through ownership of all the capital stock.

Glenn-Pool Tank Line Co.—A Company owning and operating 165 tank cars; controlled jointly by your Company as the owner of 75 per cent. of the capital stock, and the Midland Valley RR. Company as owner of the remaining 25 per cent. of the stock.

That portion of the System lying within the State of Texas, the mileage of which is included in the operated mileage of your Company, is operated separately by its owner, the Texarkana and Fort Smith Ry. Company, which Company has its own general offices and books of account at Texarkana, Texas, in accordance with the Texas law.

For the sake of completeness, however, the reports of that Company are included in those of the Kansas City Southern Ry. Company, in so far as is necessary to show the results of the operation of the whole line from Kansas City to the Gulf.

RESULTS OF OPERATION.

	Year to June 30 1915	1914	+ or −
Operated Mileage			
Miles of Main Line	793.45	788.14	+ 5.31
Miles of Branches	43.06	39.03	+ 4.03
Miles of Sidings and Spurs	429.28	426.46	+ 2.82
Miles of Second Main Track	22.88	14.02	+ 8.86
Revenues from Operation.	$	$	$
Freight Revenue	7,731,118 32	8,257,449 37	−526,331 05
Passenger Revenue	1,410,617 95	1,675,168 43	−264,550 48
Excess Baggage Revenue	14,039 86	17,370 66	− 3,330 80
Mail Revenue	141,555 27	128,595 52	+ 12,959 75
Express Revenue	172,012 22	243,624 58	− 71,612 36
Other Passenger-Train Rev.	1,951 79	1,762 53	+ 189 26
Switching Revenue	499,636 36	577,634 27	− 77,997 91
Special Service Train Rev.	4,176 50	4,838 71	− 662 21
Other Freight-Train Revenue	695 66	3,114 33	− 2,420 67
Revenue from Operations other than Transportation	60,134 14	60,844 42	− 710 28
Gross Revenues	10,035,896 07	10,970,402 82	−934,506 75
Operating Expenses.			
Maintenance of Way and Structures	1,152,078 43	1,143,805 55	− 11,727 12
Maintenance of Equipment	1,185,015 81	1,351,591 34	−166,575 53
Traffic Expenses	336,195 76	324,708 49	+ 11,487 27
Transportation Expenses	5,597,006 64	5,671,223 04	−274,216 40
General Expenses	189,008 66	118,992 48	+ 70,016 18
Transportation for Investment—Cr.	Cr. 60,484 23		Cr. + 60,484 23
Total	6,478,821 07	6,910,320 90	−431,499 83
Net revenue	3,557,075 00	4,060,081 92	−503,006 92
Taxes	574,315 98	567,857 33	− 6,458 67
Operating Income	2,982,759 02	3,492,224 59	−509,465 55
Ratio of Operating Expenses to Gross Revenues	64·56%	62·99%	+ 1·57%
Ratio of Operating Expenses and Taxes to Gross Revenues	70·28%	68·17%	+ 2·11%

Note.—Previous year's figures re-classified for comparison.

There follows a comparison in detail of Gross Revenues for the late annual period with those of the previous year :—

	$
Decreases in Gross Revenues—	
Due to general business depression and to disturbed conditions in the South, resulting from the European War	1,376,220 49
In Express Revenue, caused principally by extension of the Parcels Post	71,612 36
	1,447,832 85
Less Increases, viz. :	
From grain traffic, due to abundant crops and to conditions favouring export trade	$422,518 94
From the movement of asphalt from Southern refineries for use in paving and roofing in the North	54,619 03
From shipments of black strap molasses for use in the manufacture of mixed stock feed	23,248 38
In Mail Revenue, based on the re-weighing of mails between February 18 and June 2, 1914, effective July 1, 1914	12,939 75
	513,326 10
Net Decrease in Gross Revenues	$934,506 75

It has been the custom heretofore to assess nothing in the nature of a revenue charge against Company traffic. That practice was continued during the present year, so far as concerns operation. As required by a modification of the system of accounts prescribed by the Inter-State Commerce Commission, in effect July 1, 1914, when men or materials employed in construction are conveyed in revenue trains an amount equal to the cost of transportation is credited to Operating Expenses and concurrently charged to an investment account.

The net decrease of $431,499.83 in Operating Expenses was brought about by the causes below enumerated :—

		$
Decreases in Operating Expenses—		
Maintenance of Way and Structures—		
Due to gradual improvement in the condition of property		$61,410 08
Maintenance of Equipment		
Consequent upon the improvement of condition		166,575 53
Transportation Expenses		
Resulting from curtailment in :		
Locomotive and train expenses	$191,985 76	
Yard service	45,733 49	
Station service	17,908 05	
Casualties and miscellaneous	18,591 10	
		274,216 40
Transportation for Investment—Cr.—		
Cost of transportation in revenue trains of men engaged in and material for construction, in accordance with revised regulations of the Inter-State Commerce Commission		60,484 23
		$562,686 24
Less Increases, viz. :		
Maintenance of Way and Structures—		
Additional charges in amortization of abandoned property, made by order of the Inter-State Commerce Commission :		
Present Year		$85,015 10
Previous year		35,332 14
		$49,682 96
Traffic Expenses		
Commissions paid to private carlines and steamship companies, formerly deducted from revenue, now charged to this account in conformity to the revised accounting method of the Inter-State Commerce Commission		11,487 27
General Expenses		
Caused by enlargement in :		
Valuation Expenses		$63,323 92
Rent of General Office Building		4,201 86
Charges on account of abandoned property		1,912 94
Miscellaneous (net)		577 46
		70,016 18
		131,186 41
Net Decrease in Operating Expenses		$431,499 83

The normal decrease in Operating Expenses may be stated thus :—

			$
Net decrease, as stated			$431,499 83
Add items beyond the control of your management, viz :			
Increase in distributive charges on account of abandoned property :			
Maintenance of Way and Structures	$49,682 96		
General Expenses	1,912 94		
		$51,595 90	
Valuation Expenses		63,323 92	
			114,919 82
Normal Net Decrease in Operating Expenses			$546,419 65

The Revenue Tonnage movement for the year, as compared with that of the year preceding, was as follows :—

For the year ended June 30, 1915 :—

Revenue Tons One Mile—North	628,776,561	
Revenue Tons One Mile—South	499,954,093	
		1,128,730,654

For the year ended June 30, 1914 :—

Revenue Tons One Mile—North	621,429,476	
Revenue Tons One Mile—South	441,326,787	
		1,062,756,263
Increase in Revenue Tons One Mile		65,974,391

It will be observed from the foregoing that, although there was a decrease in Freight Revenue of $526,331.05, there was an increase of 65,974,391 in the number of revenue tons moved one mile. This was caused by a decline in high-class traffic and an enlargement in the volume of commodities carrying lower rates. Accordingly, the average freight revenue per ton mile fell off from 7.77 mills in 1914 to 6.85 mills this year.

The reduction of $274,216.40 in Transportation Expenses, notwithstanding this substantial increase in revenue ton mileage, affords evidence of enhanced efficiency, due to improvements made in recent years, and is a source of satisfaction to your management.

REFUNDING AND IMPROVEMENT MORTGAGE BONDS.

To provide funds for ballasting and other additions to and betterments of the property there were sold, under an agreement made during the previous year, $250,000.00 par value of the Refunding and Improvement Mortgage Bonds authorised by the Stockholders on June 29, 1909.

The situation at June 30, 1915, with respect to such bonds was as follows :—

Total authorized issue		$21,000,000
Issued and sold : July 1, 1909, $10,000,000 ; Feb. 15, 1911, $5,000,000 ; Nov. 1, 1912, $500,000 ; June 2, 1912, $500,000 ; April 2, 1913, $500,000 ; May 5, 1914, $250,000 ; Oct. 7, 1914, $44,000 ; April 1, 1915, $206,000 ; total		17,000,000
Unissued June 30, 1915		$4,000,000

The status as regards the Refunding and Improvement Mortgage Bonds issued and outstanding on that date is set forth in the subjoined exhibit :—

Total issued and outstanding		$17,000,000 00
Expended as shown by the Annual Report for the year ended June 30, 1912 ...	$15,000,000 00	
Expended as indicated by the Annual Report for the year ended June 30, 1913 ...	974,150 77

EQUIPMENT TRUSTS.

The total face amount of Equipment Trust Obligations outstanding June 30, 1914, was : Series "D," dated December 15, 1912, $1,302,000; paid during the year, $124,000; outstanding June 30, 1915, $1,178,000.

ADDITIONS AND BETTERMENTS.

Net expenditures were made during the year for Additions and Betterments to Road and Equipment in the amounts following : From proceeds of Refunding and Improvement Mortgage Bonds, $524,964.55; from current funds, $472,817.05.

These expenditures include the cost of a number of new sidings to serve industries not heretofore reached by your tracks, and to accommodate new industries in process of establishment.

The following is a list of such industry tracks, some of which have been completed and others are in course of construction :—

New Tracks to Serve New Industries.

Completed

Miller Horse Serum Co., Kansas City, Mo.; North Bros., Kansas City, Mo.; E. Wigglesworth and C. Rhea, Kansas City, Mo.; J. H. Riggs, Kingston, La.; Carnes-Cherokee Coal Co., Mulberry, Mo.; Lake Front Oil Co., Oil City, La.; Lapel Bottle Co., Lotsee, Okla.; Wood & Hall, Gurdon, Ark.; Beer Storage Warehouse, Mulberry, Mo.; Caddo Parish, Mooringsport, La.; P. E. Hammons (Lumber), Lucas, La.; Rothschild Iron and Metal Co., Joplin, Mo.; Lechtman Printing Co., Kansas City, Mo.; Frank Purcell, Kansas City, Kan.; West India Sugar Co., Port Arthur, Tex.

Uncompleted

L. F. Dawson (Lumber and Wood), Dorsey, Ark.; Bay State Land Co., Kansas City, Mo.; Standard Ice Co., Kansas City, Mo.

New Tracks to Serve Existing Industries.

Completed

Badger Lumber Co., Kansas City, Mo.; Louisiana Compress Co., Shreveport, La.; Southwest Gas and Electric Co., Bodcau, La.; The Texas Co., Port Arthur, Tex.

Uncompleted—

Neosho Milling Co., Neosho, Mo.; Josey-Miller Grain Co., Beaumont, Tex.

During the year 28,293 miles of your main line between Neosho, Missouri, and Mansfield, Louisiana, which had been formerly laid with 60, 75, and 80 lb. rail, were relaid with new 85-lb. material, making the total mileage of main line laid with steel rail of that weight to June 30, 1915, as follows :—

Between Kansas City, Mo., and Louisiana, La. ...	669.4 miles	
Less tracks through yards laid with 56, 60 and 70-lb. rail	5.0 ,,	
		664.4 miles
Between DeQuincey, La., and Port Arthur, Tex. ...		67.1 ,,
Total		731.5 miles

The bridges and culverts of your road have been further improved by reducing the total length of trestles from 63,082 feet to 62,263 feet; increasing the total length of steel bridges from 21,810 feet to 22,015 feet; increasing the number of stone and concrete culverts from 638 to 667; increasing the number of cast-iron pipe culverts from 563 to 570, and the number of concrete pipe culverts from 77 to 98.

ABANDONED PROPERTY.

The estimated cost of property abandoned in the course of improvements amounts to $1,079,517.86, which sum has been segregated from Capital Account. Of that total, $20,682.46 has been disposed of in compliance with instructions of the Inter-State Commerce Commission by charge to Profit and Loss, and $123,699.94 by charges to Operating Expenses, leaving for future amortisation a balance of $935,135.46, as shown by the Balance Sheet. Under existing requirements this remainder is chargeable to Operating Expenses at the rate of approximately $90,000.00 per annum.

UNION STATIONS.

The new Passenger Station at Kansas City, Missouri, property of the Kansas City Terminal Railway Company, in which your Company owns an undivided one-twelfth interest, is opened for operation on November 1, 1914, since which date it has been used by all main-line passenger trains entering and leaving that terminal.

In order to comply with the demand of the Railroad Commission of the State of Texas for improved passenger-station facilities at Texarkana, contracts were entered into with the St. Louis, Iron Mountain and Southern Railway Company, the St. Louis South-western Railway Company, and the Texas and Pacific Railway Company, under the terms of which your Company began June 27, 1914, to operate its passenger trains into and out of the Union Passenger Station at Texarkana, owned by the three companies mentioned.

FEDERAL VALUATION.

The field forces of the Inter-State Commerce Commission completed their surveys and inventories of the physical property of your Company in April 1915, and your forces similarly engaged finished their work at about the same time. In order, however, to complete the valuation it will be necessary to adjust differences between the two inventories and to establish unit prices for the resulting physical quantities. This work is now in progress, but the amount involved and the date of its completion cannot be stated with certainty.

On July 9, 1914, the accountants of the Commission began an examination of the accounts and records of your Company, with a view to obtaining such information as may be necessary to an appraisal. That work remains uncompleted.

All orders of the Commission have been fully complied with by your Company, and special efforts have been made to co-operate with the valuation forces of the Government.

The appended statement shows the cost to your Company of Federal valuation to date :—

	To June 30, 1914	For the Year ended June 30, 1915.	Total.
	$	$	$
Field Work ...	18,247 86	50,476 86	68,824 72
Valuation Orders, Inter-State Commerce Commission.	—	15,599 63	15,599 63
Contributions for Physical Property abandoned	557 99	149 24	807 23
Appraisal of real estate	—	2,848 50	2,848 50

Totals	19,947 40	93,848 15	113,795 55

The total cost of Federal and State valuation during the year was :—

Expended for Federal valuation	$93,848 15
Expended in connection with State rate litigation ...	2,851 40
Total	$96,699 55

J. A. EDSON. *President.*

CUBA RAILROAD COMPANY.

ABRIDGED REPORT FOR YEAR ENDED JUNE 30, 1915.

August 25, 1915.

To the Shareholders:

Your directors beg leave to submit the following report of operations for the year ended June 30, 1915, and a general balance sheet at that date.

The gross earnings of the railway for the year were $5,206,714.15, as compared with $5,164,670.84 for the year before; an increase of $42,043.31, or 0.8 per cent.

The net earnings were $2,727,539.85, as compared with $2,470,921.75; an increase of $256,618.10 or 10.4 per cent.

The proportion of working expenses to gross earnings was 47.61 per cent., as compared with 52.16 per cent. the year before.

The railway and its equipment and appurtenances have been well maintained and are in excellent condition.

Fourteen sugar centrals were in operation on your lines at the end of the last crop, and seven more are in process of construction for the coming crop. These will require large additions to your rolling stock, for which provision has been made.

Your Company having been granted a concession for the construction under subsidy of a railroad from Placetas del Sur to Casilda, active construction was at once commenced, and on August 1, 1915, the line between Placetas and Fomento, a distance of 27 kilometers, was completed and put into public service. The remainder of the line will be completed well within the contract requirements.

Two half-yearly dividends of 3 per cent. have been declared on the Common Stock of the Company, one of which was paid on May 1 last, and the other is payable on November 1 next.

The thanks of the directors are due to the operating officers of the Company, whose zeal and efficiency have contributed so largely to the favourable results of the year.

For the directors,

W. C. VAN HORNE,

President.

STATEMENT OF OPERATION—BY PERIODS—FOR FIVE YEARS ENDED JUNE 30, 1915.

Copies of the full Report can be had at the Office of Messrs. Robert Fleming and Co., 8 Crosby Square, London, E.C.

THE CUBA COMPANY.

ABRIDGED REPORT FOR THE YEAR ENDED JUNE 30, 1915.

August 26, 1915.

To the Shareholders:

An Income Account for the year ended June 30, 1915, and a General Balance Sheet at that date are submitted herewith.

The Surplus Income of the Cuba Railroad Company for the year ended June 30, after providing for its fixed charges and dividends on its Preferred Stock applicable to the year, was $1,273,684.28, an amount equal to 12.73 per cent. on its Common Stock, all of which ($10,000,000) is in your treasury. From this surplus dividends amounting to 6 per cent. for the year were declared on its Common Stock, of which 3 per cent. was paid May 1 and 3 per cent. is payable November 1.

Your profits for the year from the Jatibonico Sugar Mill and Plantations were $1,445,030.25; from the Jobabo Mill and Plantations $1,550,772.71; from the Land Department (chiefly from town sites) $57,187.97; a total of $3,120,032.01, including an additional profit of $67,041.08 from the crop production of 1913-14. Adding the dividends of $600,060.00 from the Cuba Railroad Company and deducting interest and general expenses and dividends on Preferred Stock, the surplus income for the year, applicable to the Ordinary Stock, was $3,214,621.93.

The better prices which have prevailed for the past year have had much to do with these favourable results, on the other hand the production of sugar was nearly 12 per cent. less than the year before owing to frequent interruptions by unseasonable rains and to a serious weakening of juices from the same cause.

Practically all of the sugar and molasses remaining on hand at June 30 have now been sold for the full value shown in the balance sheet.

Your directors have felt warranted in paying on July 1 from the year's results an interim dividend of 10 per cent. on your Ordinary Stock and in declaring an additional dividend of the same amount payable October 1, and another of the same amount payable November 1.

The payment of these dividends will leave in the treasury about $1,500,000.00, which should be ample for any needs or contingencies.

Your directors are very largely indebted to the industry and efficiency of the officers of the Company in Cuba for the satisfactory results obtained.

For the directors,
W. C. VAN HORNE,
President.

CANADIAN PACIFIC RAILWAY COMPANY.

Address of President Sir Thomas G. Shaughnessy to the Shareholders at the Thirty-fourth Annual Meeting, held in Montreal, October 7, 1915.

THE annual statement of your affairs now before you for consideration and approval is, in some respects, the most unsatisfactory that has been submitted for a number of years past. The shrinkage in the gross earnings of your railway system, compared with the previous year, of $31,000,000, is very marked. Indeed, it is in excess of your entire gross earnings in the year 1901. But the fact that, notwithstanding this great falling off in revenue, your regular dividend was earned, is unquestionable evidence of your foresight and wisdom in having made such expenditures during the past ten or twelve years as to enable you to make a saving in your working expenses representing such a substantial offset to the loss of gross revenue.

PHYSICAL CONDITION OF THE PROPERTY.

The physical condition of your property has never been better than it is at this time, the reduction in the cost of maintenance of way for the year being due very largely to a favourable winter, and to the fact that works of betterment, chargeable in considerable part to working expenses, were completed before unfavourable business conditions appeared; and the additional facilities for the conduct of your business, provided by your expenditures, made it possible for you to handle your traffic more expeditiously and economically. As an illustration—the number of tons of freight traffic hauled one mile, in the year covered by the report, was 82% greater than in 1905, but it required only 17% additional train miles to perform the service. Improved gradients, double tracks, better terminal facilities, large locomotives and cars enabled you to earn $3.17 per freight train mile in the last year, as against $1.93 in 1905, an improvement of 64%, although there had been a substantial reduction of freight rates in the meantime. Taking everything into account, I feel that we may accept the outcome of the year as evidence of the strongly increased position of the Company, and may look forward to the future with buoyant confidence.

A BOUNTIFUL HARVEST.

In these days, when so many nations are engaged in a bloody and expensive war, when the financial machinery of the world is out of gear, and general business conditions are disturbed, it is not wise to make predictions; but everything points to marked improvement in your revenue during the current fiscal year. The country has been blessed with a most bountiful harvest, and, while the price of wheat is lower than it was a year ago, it is still above the average, and conditions prevailing abroad should cause a continued demand for this and many of our other products. Conservatively estimated, the field crops harvested this autumn in the four provinces west of Lake Superior will yield, *per capita*, to the rural population in these provinces, more than twice as much money as the rural population of the eight States directly south of them received, *per capita*, for their field crops in 1914. With agriculture as the most important pedestal of our prosperity, any substantial addition to the income, and, therefore, to the buying power of the agricultural community, is reflected in every line of trade; so that we have reason to anticipate a decided betterment of the westbound merchandise traffic.

IMPROVEMENT IN LAND SALES.

A substantial improvement in your land sales—77,000 acres in the last three months, as compared with 41,000 acres in the same months last year; increased activity in the mining and smelting industries of southern British Columbia; larger shipments of lumber from the western mills to the interior; are all encouraging signs, indicating, as they do, a partial restoration of confidence, and a step in the direction of normal times. It is to be hoped that, in anticipation of the close of the War, and the new conditions that will come with it, an organisation will be perfected for unity of action by the Dominion and Provincial Governments and the important business interests of the country, looking not only to the largest possible immigration of agriculturists, but to the development, on a more comprehensive scale than ever before, of the vast natural resources of the country, so that the position of Canada may be strengthened to meet the financial obligations of the country resulting from the War and from other causes with which everybody is familiar.

Until the market improves no special effort will be made to dispose of any portion of the 4% Consolidated Debenture stock, amounting to about $40,000,000, representing advances made from your Treasury for the construction of additional railway mileage, as there is in hand at present sufficient money to meet all your requirements for a considerable period.

THE COMPANY LOSES TWO VALUED DIRECTORS.

The Company has suffered severe loss by the death of two of its most valued and esteemed directors. Sir Sandford Fleming, who died on July 22, was associated with the Canadian Pacific before the organisation of the present Company as chief engineer of the Dominion Government, and he became a member of the Board of Directors of the Company in 1885. He attended the meetings of the Board with great regularity, and took keen interest in the Company's affairs until he was seized with the illness that finally proved fatal. Sir William Van Horne, who passed away on September 11, joined the Company as General Manager at the end of the year 1881, and from that time until he retired from the Presidency in 1899, he devoted himself to the administration of the Company's affairs with a whole heart and with unbounded confidence. During the period that the through line of railway was under construction, and when its early completion was a matter of vital importance, his energy, ability, and indomitable courage were of a value that could not be over estimated. He lived to see the enterprise attain proportions quite beyond the most ambitious anticipations of the earlier days. The shareholders, as well as his associates on the Board of Directors, will, I am sure, always cherish his memory.

At a meeting of the Board of Directors subsequently held, Sir Thomas Shaughnessy, K.C.V.O., was re-elected President, and Mr. George Bury Vice-President, of the Company; and the Executive Committee was appointed as follows: Mr. Richard B. Angus, Mr. George Bury, Sir Herbert S. Holt, Sir Edmund B. Osler, and Sir Thomas G. Shaughnessy.

MEETINGS
OF PUBLIC COMPANIES.

HARRISONS AND CROSFIELD, LIMITED.

THE seventh ordinary general meeting of Harrisons and Crosfield, Limited, was held on October 12 in the council room of the Rubber Growers' Association (Incorporated), 38 Eastcheap, London, E.C., under the presidency of Mr. C. Heath Clark, J.P., the Chairman of the Company.

The Secretary (Mr. R. S. Field) having read the notice convening the meeting and the auditors' report,

The Chairman, who was received with applause, said: Gentlemen, I expect it will be your pleasure that we follow the usual custom and take the report and balance sheet as read, and I think you will probably feel with us that, having received and read them, they represent a satisfactory year's trading on account of our Company. The amount of the Company's net earnings is £18,000 more than last year, when they were £9,000 above those of the year before. On the occasion of our last meeting we had only been at war for a little more than two months, and although the general position in the commercial world had somewhat cleared, as compared with the first two or three weeks after the outbreak of hostilities, there yet remained a great feeling of uncertainty as to what the effect would prove to be upon commercial undertakings throughout the Empire. I ventured then to express the opinion that while undoubtedly we, in common with others, should certainly find the difficulties connected with the carrying on of our business greatly increased by the vast struggle in which our own country and most of the other European Powers were involved, the commercial result would prove more satisfactory than many then anticipated. During the year under review we certainly have had far more than the ordinary crop of difficulties to contend with, and have also sustained in some directions losses as the direct outcome of the War, but those losses have been more than compensated for by increased earnings in other directions. The foundation of what I feel sure you will regard as the very satisfactory increase in the profits earned by our Company I believe to lie in the fact that the products we are mainly interested in have proved as necessary to the life of the community in time of war as in time of peace—possibly even more so. The amalgamation of the Company's interests in Australia and the United States with those of Messrs. Fraser, Ramsay and Messrs. A. P. Irwin and Company respectively, reported to you a year ago, has proved entirely satisfactory and beneficial to the Company's business.

The Accounts Reviewed.

The balance sheet continues to show increasing strength as well as extending business, the total this year amounting to over £2,000,000, against £1,500,000 last year. On the liability side, our nominal capital has been increased by £200,000 in consequence of the resolution passed by you at our meeting a year ago. Having obtained the sanction of the Treasury, we issued last June 100,000 5½% Cumulative Preference shares at par; these at the date of our balance sheet were 10*s.* paid, and had then increased the amount of our paid-up capital by £50,000. We had also received on the same account £37,000 for calls paid in advance Our reserve funds, which a year ago amounted to £235,882, stand in the present balance sheet at £281,000, including the amount of £17,500 transferred out of this year's profits to the Preference reserve fund. The amount of the mortgages on our freehold properties is again slightly reduced, and the deposits held by the Company are increased from £29,000 a year ago to £155,000. Bills payable show a reduction from £182,000 to £161,000 this year. We have a new item appearing in our balance sheet, amounting to £255,000, for acceptances on behalf of clients. This came into existence as one of the results of the financial changes brought about by the War, when, in order to assist the position then created, we undertook to accept on behalf of a number of the companies for whom we are agents drafts drawn by them in the East for their estate requirements. Sundry creditors amount to £106,000, against £68,000 a year ago. On the other side, freehold and leasehold property has increased by about £10,000, while the accounts for plant, machinery, furniture, and fittings have been somewhat reduced. Sundry stocks at £338,567 are £111,737 more than a year ago, which arises partly from the increased value of produce, but mainly, perhaps, from the Company's increased turnover. Loans receivable by the Company amount to £185,000, as against £132,000 last year, and the bills receivable amounted to £70,000, as against £9,343 a year ago, the item of sundry debtors remaining very much the same.

Value of the Investments.

Our investments, taken at cost or under, amount to £515,898, and the depreciation on this amount at June 30 was £22,573. A year ago investments stood in our balance sheet at £474,577, and showed a depreciation at that date of £58,286. This recovery in value justifies the opinion expressed last year that any depreciation on our investments would prove to be only of a passing and temporary character, consisting as they very largely do of interests in tea and rubber properties which have not yet reached the producing stage; it appears to us to be only a question of time; and any paper depreciation shown from time to time will eventually disappear altogether. It has been necessary to provide, approximately, £5,000 to maintain the Preference reserve fund investments at the full value shown in our balance sheet, and, in view of the financial position created by the War, it appears probable that further provision will need to be made from time to time until money ceases to rise in value. The cost of the new issue of capital we propose writing off out of the year's profits, in order that our balance sheet may continue to show as assets only such as are represented by cash values.

Allocation of the Profits.

From the profit and loss account you will see that, after making the usual full provision for depreciation, and, in addition, writing off certain special losses directly resulting from the War, also after having paid dividends on the Cumulative Preference shares and interim dividends on the Preferred Ordinary and Management shares, amounting together to £57,500, providing for the depreciation on the investments of the Preference reserve fund and the addition thereto of £17,500, we have, including £35,530 brought in from last year, an amount of profit available of £107,939 19*s.* 10*d.* This we propose dealing with by transferring to income tax reserve £22,500; writing off expenses of the new issue, amounting to £5,595 3*s.* 1*d.*; the payment of the final dividend on the Preferred Ordinary shares of 5%, absorbing £15,000, and making 10% for the whole year; and the payment of 3*s.* per share on the management shares, amounting to £22,500, leaving to be carried forward £42,344 16*s.* 9*d.*, as against £35,530, the amount brought in from last year. The Company has since the commencement of the War contributed £1,700 to various relief funds. I am sure you will agree with me when I say that this is a year when our thanks are especially due to the members of our staff, both in London and in charge of our branches abroad, for the efficient manner in which their duties have been performed, often under especially trying conditions, and throughout the year under circumstances of greatly increased strain. (Applause.) As mentioned in the report, 65 members of the London staff have joined His Majesty's Forces since the outbreak of War, two of whom, Captain Cunningham and Private Wallington, have lost their lives in the service of the country. We are continuing to pay half-salary to all members of our staff who have enlisted—a course which, I am sure, you will heartily approve of. (Applause.) Those remaining in the Company's service are also, we believe, effectively serving the national interests by enabling our work of production and distribution to go forward unchecked. We have, in addition to the ordinary business of the Company, through our branches in Medan and Batavia, undertaken to act in the interests of large numbers of shippers in this country and our Colonies, as well as the allied nations, to secure the release of the cargoes in which they are interested from enemy ships taking refuge in the Dutch Indies. The Company is providing for the control and management of between 150,000 and 200,000 acres of cultivation in the Middle East, principally under tea and rubber. These productions are a big factor in the well-being and resources of those parts of the Empire from which they come, and also form a valuable contribution to the economic and material strength of this country.

The Rubber Industry.

It is, perhaps, not generally recognised what an important factor rubber is in our exports to America and in assisting to adjust the exchange with that country at the present time. The amount of rubber exported from the United Kingdom to the United States of America last year amounted to nearly eight millions sterling, and if that going direct from the Middle East is added, the total reaches between 10 and 11 millions. In the first case it represents about one-sixth, and in the latter one-fifth, of the total exports from this country to the United States of America. Rubber is two-and-a-half times the value of any other item in the list of our exports to America, and occupies the fourth place for value among the imports of the United States of America from the whole world. Probably about 70 millions of British capital is invested in the rubber industry in the Middle East, and although at the present time not more than about half of this large capital outlay is productive, it will return for the present year produce of the value of from 18 to 20 millions sterling. (Applause.)

The development of the plantation rubber industry and the investment of this capital in the Middle East have also enabled this country and our Allies to have at their disposal and under their control by far the largest part of the world's supply of one of the things essential for carrying on the present struggle. The past year has served to place the industry in a still stronger position. For some years past I have asked your attention to the great reduction being effected in production costs, and last year I mentioned that taking 10 companies that had reached the producing stage from among those under our care, there had been an average reduction of 6d. per lb. in the cost of production on those estates. This year there has been over the same properties an average reduction of 4*d*. in the costs, making a total of 10*d*. per lb. in two years. (Applause.) This reduction in costs will, I believe, still continue, although of necessity not to the same extent, but undoubtedly to the essential point to which we have always looked forward—that of making the plantations of the Middle East by far the cheapest, as well as the best, sources from which the world can draw its rubber supplies. This result is continuing to work itself out, and can be seen in the increase of the supplies from the Middle East—this year amounting to about 33%—and on the other hand the decrease in the supplies from all other sources—this year probably amounting to about 20%. The increased demand has continued to absorb the increasing supplies throughout the year, and at prices which for the first eight months are fully equal to the average price obtained for the whole of last year, while the larger output and reduced costs are giving a satisfactory increase in the profits of most producing companies. Prospects at the present time appear to indicate the continuance of an entirely satisfactory demand, capable of taking the increased production, at prices which will prove quite satisfactory to producing companies. (Applause.) I think, as a matter of fact, there is no reasonable doubt that the average price realised for the complete year 1915 will show a material advance on that for the complete previous year. We have a very strong market at the present time with prices that are well ahead, probably amounting to at least 4*d*. a pound more than those ruling a year ago. So it looks as if the balance of this year should give a materially increased average price for the whole year. Therefore the producing companies will be in the fortunate position of improving their earnings both from the actual price of the produce, and also from the very material reduction which has been made in the costs of production. (Hear, hear.)

Outlook for Tea.

Tea, from the producer's point of view, has had an exceedingly prosperous year, and recently prices have reached a higher level than they have touched for a great number of years past. I have pointed out at previous meetings of our Company that the increasing consumption of tea was not being sufficiently provided for by any new acreage coming into bearing, and could only be met as the result of higher cultivation, and this has yielded a very large increase over the existing area under tea, but not to an extent to meet the increased consumption, which would appear to have been further advanced as the result of the war. Imports into the United Kingdom for the year ended June 30 last amounted to 395,000,000 lb., against 361,000,000 lb., or an increase of 34,000,000 lb. on the previous year, and the stock remaining showed an increase of only 2,000,000 lb., so that practically the whole of the increase had been absorbed, and that at prices which showed from ¼*d*. to ½*d*. advance on the average for the year. This advance became so marked subsequently that for the first part of the present season the average prices are from 2*d*. to 3*d*. per lb. higher than those of the corresponding period last year. There are two considerations which make the continuance of these extremely high prices throughout the present year improbable. The weather during the present season has been exceptionally favourable for increased production, and it is fairly certain that India, Ceylon, and Java will be in a position to largely increase their exports, and will together provide a greater surplus than we have had for some years, and the continued strength of the market must largely depend upon how far the foreign and Colonial markets will prove to be in need of largely increased supplies.

Tea Duties and Alcohol.

It is to be feared that the home trade must feel the effect somewhat severely of the increased duty. A 5*d*. duty which since the war has advanced to 1*s*., and represents a tax of 100% or more on the value of the articles concerned, must have an effect in diminishing consumption, and certainly must press heavily upon the distributing trade in this country, who, having the extra money to advance for duty payments, are also likely to find the profits curtailed by the enhanced prices. The producing companies, on the other hand, appear pretty certain on the whole to continue doing well, for which purpose it is not necessary that prices should be maintained at the extreme rates recently ruling. It appears regrettable, from the national standpoint, that it should have been necessary to add another 4*d*. per lb. to the tea duty at the present time, when the great majority of people recognise the vital necessity of increasing the national efficiency by reducing the consumption of alcohol, for which tea is undoubtedly the greatest and most popular substitute, as well as being the drink of the poorest classes in the community. This, as well as other taxation imposed, will affect us to some extent, but that is not the point of my objection. I think that we, in common with the rest of the business community, feel that when the lives of our young men are being sacrificed by thousands in the cause of human liberty and the defence of the Empire, we are glad to be in a position to make financial sacrifices necessary to meet a crisis in our history which calls for sacrifices from everyone. (Applause.) All that we, as business men, should ask is that the incidence of the necessary taxation should be as just and as equitable as it can be made, and leave the earning power of our industrial and commercial undertakings as free as possible to continue adding to the available resources of the nation.

Retirement of Mr. Charles Harrison.

We record, with regret, the retirement from the board of Mr. Charles Harrison, necessitated by his advanced age and declining health. Mr. Harrison was associated with this business for a good many more years than any of those of us now responsible for its management have lived, and one result from his long connection with the business has been the making of many friends and not a single enemy—(applause)—and every one of us who knows Mr. Harrison will, I am sure, most sincerely join in wishing him every happiness in that retirement which has been so well earned by his long service in connection with the old firm of Harrisons and Crosfield, and subsequently with this Company. (Applause.) I have now, gentlemen, much pleasure in proposing "That the balance sheet and report of the directors and auditors be adopted." I will ask Mr. Lampard to be kind enough to second the motion, and then if there are any questions I shall be glad to do my best to answer them.

Mr. C. Arthur Lampard: Gentlemen, I feel sure that, after having heard the careful, exhaustive, and very interesting account which has been given to you by the Chairman, it is quite unnecessary for me to detain you beyond saying that he has indicated to you, I think, very clearly that the prospects before the business, and particularly the two main things in which we are interested, continue to be satisfactory, and hold before us almost the certainty of continued prosperity. I have much pleasure in seconding the adoption of the report and accounts. (Hear, hear.)

Extra Capital and War Profits.

Mr. J. J. B. Saffery said he presumed that half of the £18,000 of extra profit would go to the Government as war profit.

The Chairman replied that he thought it was quite certain that they would not have to give half of the extra profit to the Government, because there would be an allowance for the increased capital. It was quite impossible for him to say then exactly what, if anything, their contribution would be, but he was sure it would be the pleasure of the shareholders to give to the Government anything that they were justly entitled to. On the other hand, he expected that shareholders would regard him in the light of their trustee whose duty it was to see that they did not pay anything that ought not to be paid. (Hear, hear.)

Colonel Stewart said he supposed that the £18,000 of extra profit arose to a considerable extent from the £450,000 of extra capital embarked in the enterprise—£300,000 of Preference shares and the premium of 50%—and used in the working of the Company throughout the whole year. On this sum the extra profit represented barely 4%. The accounts were so compressed that it was not easy to read as one ran. At the meeting last year he suggested that, in the statement of accounts, the corresponding items of the previous year should be shown, and he understood the Chairman then to say that he would attend to it, but nothing of the kind was done in the accounts now presented. He thought it ought to be done, and in fact it was done by other well-known companies.

The Chairman said Colonel Stewart's statement as to the additional capital was not quite correct. The only additional capital they had had in use during the year was the first instalment of the new Preference share capital issued just before the conclusion of the financial year. The previous year's results were obtained with practically the same capital as that employed during the year under review.

The Fructification of Capital.

It might interest the shareholders to know that a very large part of the Company's capital was invested in such a form that it did not bring in returns immediately they received the capital. On the contrary, they had to wait for years before they obtained a return from a very large proportion of their capital. Fortunately, they had been in the position of being able to utilise the productive capital to such good purpose that they were able to pay dividends upon the whole, although they did not receive interest from some considerable portion of it for many years after it was invested. (Hear, hear.) With regard to Colonel Stewart's other point, his suggestions had not been forgotten. They were brought before the board and very carefully considered, and their conclusion was that the disadvantages arising from the course suggested would be greater than

the advantages. They had therefore adhered to the form of accounts adopted in previous years.

Colonel Stewart said he was reminded of a remark of a young officer in his regiment. Referring to a new drill-book, he said : "Colonel, this drill-book is full of omissions." (Laughter.) In the same way, the directors' report was full of omissions.

The resolution was then put to the meeting and adopted.

The Chairman moved : "That a final dividend of 5% on the Preferred Ordinary shares (making 10% for the year), and a final dividend of 3*s.* per share on the management shares, be paid forthwith."

Mr. John M. Schmidl seconded the motion, which was unanimously passed.

Mr. George Croll proposed the re-election of the retiring directors, Mr. C. Heath Clark and Mr. C. Arthur Lampard. He said these gentlemen had been so long and so closely connected with the Company, and were so well known to the shareholders, that it was unnecessary to say anything in support of the resolution.

The motion, which was seconded by Mr. H. Eric Miller, was unanimously adopted, and the Chairman returned thanks.

Mr. Theodore Crosfield moved the reappointment of the auditors, Messrs. Price, Waterhouse & Co. He added : As I am on my feet perhaps I may be allowed to associate myself very heartily with the expressions that you made use of just now respecting Mr. Charles Harrison. I was associated with him here, as you know, for many years longer than you were, and I am sure that all of us who came into contact with him feel a great affection for him and greatly desire that your good wishes may be fulfilled.

Mr. H. J. Cox, who seconded the motion, said : Mr. Crosfield was serving as a partner with Mr. Charles Harrison for a great many years. I had the privilege of serving as a servant with Mr. Charles Harrison for a great many years, and I should like to associate myself with everything that has been said with respect to him. (Hear, hear.)

The motion was unanimously adopted.

Mr. J. E. Crosfield : May I, before we disperse, propose that our very best thanks be given to the Chairman for the way in which he has occupied the chair, and for the very lucid and full statement that he has put before us to-day. I think it is no less than is due to him. (Hear, hear.)

The resolution was duly seconded and passed unanimously, and, the Chairman having returned thanks, the proceedings terminated.

KYSHTIM CORPORATION, LIMITED.

THE sixth annual general meeting of the Kyshtim Corporation, Limited, was held yesterday at Winchester House, Old Broad Street, E.C., Mr. C. F. H. Leslie (the Chairman) presiding.

The Assistant Secretary (Mr. G. K. Wicks, A.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said : Gentlemen,—Since we last met this country and the Empire of Russia have been plunged into a state of war, and it falls to me to-day to explain to you how this grave crisis has affected the prosperity of the Kyshtim Mining Works, the Russian Company in which this Corporation holds the whole share capital.

The Russian Company's Accounts.

If you will turn to the profit and loss account of the Kyshtim Mining Works I will summarise the changes which have taken place as compared with the preceding year as briefly as possible. The profit from copper shows a decrease of £67,000, from iron a decrease of £32,000, from forests a decrease of £3,500, and from barren pyrites a decrease of £2,500—a total decrease of £105,000. The expenses show an increase for the following items :—Interest, £2,000; land and Government taxes, £6,000; exploration expenses, £9,000; administration expenses at Kyshtim, £6,000; insurance, £2,000; and war charities, £2,000—a total increase in expenses of £27,000. These increased expenses are rather more than balanced by savings in expenditure, as follows :—We have placed less to reserve fund, £5,000; there is less reserve necessary for profit tax in Russia by £20,000; and we have escaped the cost of issuing new share capital in Russia, £6,000—making a total saving of £31,000. The net result of the Kyshtim Mining Works for the year, therefore, after writing off £100,000 to depreciation and £18,372 for reserve, is £101,000 less favourable than the previous year. The net amount available for the dividend of the Russian Company is, in actual figures, £210,526 6*s.* 4*d.*, compared with £311,578 19*s.* in the previous year.

Increased Stocks of Metals and Materials.

So far as the balance sheet of the Russian Company is concerned, I need only, I think, call your attention to one item, and that is the item under the heading of "Stocks of metals and materials at cost, £458,000," a figure nearly £114,000 higher than in the previous balance sheet. This increase reflects the requirement of a far larger working capital in war time than in peace time, and we have, I fear, to look for a further increase as the War goes on in this requirement of additional working capital. Before leaving the Kyshtim Mining Works figures I draw your attention to the fact that, although for the convenience of shareholders the rouble figures of the Russian Company are translated into sterling figures, the exchange for this purpose has been taken, as in all previous translations, at 95 roubles to the £10, whereas the actual rate of exchange between Russia and this country is to-day about 140 roubles to the £10.

The English Company's Revenue and Expenses.

To turn now to the accounts of the Kyshtim Corporation, we have, apart from the dividend to be received from the Russian Company, increased receipts and savings as follows :—Interest and commission, £7,000; a saving in Debenture interest of £16,000; a saving in directors' fees of £10,000; and a saving in mine exploration of £3,000; making a total saving of £36,000; against which there are, unfortunately, the following increased charges :—Losses in exchange, £36,500; and increased income tax, £22,500; making a total of £59,000, and showing a net decrease in income of £23,000. The net income of the Corporation, therefore, for the year under review is approximately £124,000 less than last year—equivalent to a falling-off in earnings of 2*s.* per share. In other words, our earnings for the year under review are approximately 3*s.* per share, as compared with 5*s.* per share, the earnings of the previous year.

Dividend Position Explained.

I next come to the paragraph in the report which deals with the dividend recommendation of 1*s.* per share. I feel sure that there are many present here who would wish to hear our reasons for this recommendation in greater detail than has been given in the report. Up to a quite recent date the profits being earned in Russia and due to this Company were being remitted to this side in the form of gold and silver residues, the product of the electrolytic refinery in Russia. These residues, when they arrived in London, were refined and converted into sterling, and in this way the Russian Company paid to this Corporation the dividend it had declared on the Russian shares. This method of remittance had great advantages for us in that it enabled our profits to come over here, even after the deduction of transport and insurance charges, at the exchange approximately of 100 roubles for £10. Early in August, however, the export of gold-bearing residues was prohibited by the Russian Government, and this asset, which I think we rightly regarded as our most liquid asset, is not at the present time capable of realisation into sterling, seeing that there is no plant in Russia capable of separating the gold and silver—the only way by which the product can be turned into cash without a large loss to the Company. The directors of the Russian Company are at the present time negotiating with the Ministry of Finance in Petrograd as to these residues, and I am hopeful that an early solution of this difficulty will be found. Until this asset, which up to the end of October I estimate at £120,000, is liquidated, it is impossible to recommend any further distribution by way of dividend, and the only course open to us is to carry forward the very large sum of £145,000 until such time as the Russian Company can realise these gold and silver residues and remit the dividend to this country. At such a time as this through which we are passing we must expect these temporary difficulties, and this is only one out of many with which we have had to contend, and perhaps this Company may consider itself fortunate in being able since the commencement of the War to distribute to shareholders by way of dividends, without prejudice, as I believe, to the financial stability of the Russian Company, so large a sum of money as £250,000. (Hear, hear.)

Capital Expenditure.

The capital expenditure of the Russian Company for the year 1914 amounted to about £130,000, and was applied approximately as follows :—At the various mines in shaft sinking, £9,000; at the Upper Kyshtim works, £11,000; at the electrolytic refinery, £10,000; at the Kasli foundry, £2,000; at the Niaspetrovsk iron works, £3,000; at the Karabash smelting works, mainly in the completion of the reverberatory furnace, £80,000; on the railway, £2,000; on the coal mines, £6,000; and mechanic shops, £7,000; making a total of £130,000.

Ore Reserves Increased.

I will now call your attention to the copper mines and their ore reserves, which constitute the principal asset of the Russian Company. You will see from Mr. Gilman Brown's report on page 10 that during the twelve months ended April 1915, we extracted from the mines 352,000 tons of ore; and that during the same period we opened up by development and drilling work 558,000 tons of ore, so that we are in the position of having increased our ore reserves during that period by 206,000 tons, the total tonnage of our ore reserves as at April 1915 being estimated at 2,667,000 tons. Since the date of this report we have, however, received news, which was published in the usual way, that a new borehole at the Smirnoff mine has struck the reef at a vertical depth of 1,100 feet, or 500 feet deeper than the previous depth proved at this mine. This borehole

has intersected both the east and west veins. The east vein, as proved by this borehole, shows a 6 feet width of massive pyrite, and incidentally proved the ore-body to extend at least 100 feet further to the north than on the third level. On the west vein the width as proved by this borehole is 41 feet, containing nearly 3% of copper and about 10*s.* per ton in precious metals. It is estimated that this borehole has added some 623.000 tons of ore to the reserves, or, at the present rate of working, another two years of life to the mine, so that we have at the present time, and at the present rate of working, something like ten years of ore reserves in sight—a position which I feel sure you will regard with satisfaction. (Hear, hear.)

Cost of Production.

The cost of producing refined copper for the year under review increased by about £6 per ton, and the causes of this increase have been dealt with by Mr. Gilman Brown in his report. I believe these causes to be of a temporary nature and to be due to the abnormal conditions caused by the War. Among these conditions was the total cessation of the coal deliveries for which we had contracted and on which the work of the power house and the reverberatory furnace at Karabash were dependent; there was also the mobilisation by the Government of more than one-third of our regular employees and the shortage of railway and other transport, on which we were largely dependent, both for receiving our stores and dispatching our copper. Under these difficult circumstances I regard these figures as being satisfactory and as reflecting the greatest credit on the staff at Kyshtim. (Hear, hear.)

A New Coal Supply.

I may here mention that the coal supplies on which we were dependent came from a colliery situated about 55 miles from Kyshtim, and that at the outbreak of war the output of this colliery was commandeered by the Government. Under these circumstances we exercised an option on a coal-field in the same neighbourhood, which we had been investigating and proving for some months previous to the outbreak of war and have since been developing. This colliery is situated about 2½ miles from the main line, and our geological department inform us that we have probably several million tons of coal above the 200-foot level. (Applause.) The necessary connections with the main line are in course of construction, and we have reason to believe that within a few weeks this colliery will be able to supply us with all the coal we require. (Applause.)

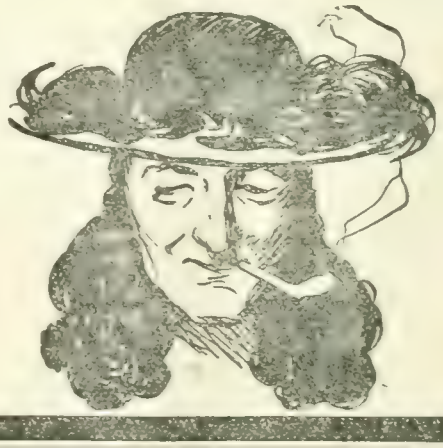
Larger Copper Output and Higher Price Obtained.

During the year 1914 the price realised for refined copper was somewhat lower than for the previous year, and the production of copper, which was 7.588 tons, fell off by 383 tons. To state the position of the copper output up to date, I may inform you that the production of blister copper up to October 2 in the current year was 5.981 tons, as compared with 5.558 tons in the corresponding period of the year under review. The price obtained for refined copper up to July 13, 1915, was about £102 10*s.* per ton, or £10 per ton in excess of the average price for the whole of 1914; the price obtained for the month of July was £115 10*s.* 3*d.* per ton, and for August—the last month for which we have information—£133 per ton, which showed an increase of £40 per ton on the price realised during the year 1914. With regard to the immediate future of our copper production, I regret I cannot hazard any forecast. As Mr. Gilman Brown has told you in his report, there are many factors beyond our control which will regulate production, and no definite estimate of any value can be made. I have, however, no reason to suppose that there will be any considerable falling-off in production, except perhaps of a temporary nature, and it is satisfactory to know that, under normal conditions, our mines and plant are now capable of producing 10,000 tons of copper a year. (Applause.) As regards our iron works and our timber business, which are so greatly dependent on the supply of labour, I have little to tell you. I am hopeful that the Kasli works will show improved results, and that the profit to be received from these sources of revenue will not show any decrease during the current year. In the circumstances under which I am addressing you I have to be very vague and guarded. We cannot see very far forward, and the conditions under which we work vary from day to day. At the same time, we have no reason but to be hopeful and confident both as to the immediate prospects of the Company and as to its future. (Applause.)

Work for the Russian Government.

This War has created certain new situations which will affect our Company, and I will briefly mention one or two of them. We are, at the request of the Russian Government, erecting works for the annual production of about 8.000 tons of sulphuric acid. The cost of erecting this plant will be advanced by the Russian Government, and the first two years' output of these works has been purchased by the Russian Government at a price which should be satisfactory to the Company. (Applause.) We have also received large orders for sulphur pyrites from the Russian Government, and we may expect satisfactory results from these sales. In consequence of the pressing demand for this mineral we have increased our output, and are at the present time producing about 1,000 tons a week. We also have other negotiations in progress with the Russian Government with a view to assisting them in every way possible in the munitioning of their vast armies—(Applause)—and it is our aim and object, and indeed our privilege, to place the whole of our resources at their disposal. (Hear, hear.)

The Supply of Labour.



The calling up for military service of our regular workmen has made great gaps in the ranks of labour employed on the estates. These gaps have been partly filled by the re-arrangement of operations on the estates and partly by labour obtained from other sources. We are also shortly expecting an increased supply of labour from workmen who, owing to the season of the year, will soon be free from agricultural employment, but I need hardly remind you how impossible it is, under these conditions, to formulate in figures the results we hope to obtain. From these remarks you will gather that we have much work in hand for the Russian Government quite apart from our established industries, and we feel confident that the Government will give us all the assistance that is possible to enable us to obtain an adequate supply both of labour and transport—two vital necessities for the effective conduct of our business. In conclusion, I wish to send the acknowledgments of the board, and, I think, too, of the shareholders, to those who have been left to carry on the work of the Russian Company at Kyshtim and Petrograd—(Hear, hear)—and also our best wishes to those who have joined the Colours and are fighting for the Empire of Russia in this great struggle of nations. (Applause.) I now beg to move that the directors' report, balance sheet and statement of accounts for the period ended January 13, 1915, now before you be received and adopted.

Mr. Leslie Urquhart (Managing Director) seconded the motion.

Shareholders' Inquiries.

Mr. Maude asked whether the disturbances among the local population near Niazepetrovsk were of a serious nature and whether they were likely to affect the future working of the Company. Referring to a circular which had been issued by a firm of brokers, he inquired why the Company had not benefited by the increased price of copper and whether the large production of the metal in other countries would adversely affect the Company.

Sir John Jardine wished to know whether any payment had been or was likely to be made by the Russian Govern-

ment in respect of lands taken from the Company for the use of farmers or for the setting up of new villages.

Mr. George Moore suggested the advisability of printing in future annual reports the figures of the previous year. The change, he thought, would be appreciated by the shareholders.

The Chairman's Reply.

The Chairman, in reply, stated that the disturbance at Niazepetrovsk arose out of the introduction of an Insurance Act in Russia under which, as in this country, the men had to contribute a certain amount periodically, which was deducted from their wages. Niazepetrovsk, where the Company's ironworks were situated, was some 60 miles from Kyshtim and about 35 miles from any railway station. The remoteness of the place meant that the men did not easily find out what other workmen were doing, and they took this Act as a great grievance. It was essential, however, in the opinion of the Russian Government, that it should be enforced, and by their orders certain men were arrested. In the circumstances, the men refused to work. In the ordinary way they would no doubt have seen reason and have gone to work again, as the men in other Ural works did; but it so happened that there was a new railway being built through the property, and they were able, with their families, to work on the earthworks of that railway without infringing the principle over which they had quarrelled. In other words, they could contract to do so much work for the railway company, and in that way they did not come under the Insurance Act. It had been impossible to restart the works during the War. In a sense this had not been a great misfortune to the Company, because many of the men who were called up from the Karabash smelter and the copper works had been replaced by men previously employed at Niazepetrovsk. He was loth to enter into further details, because this was a question of Russian politics, and he hesitated very much to criticise the political situation of another nation. (Hear, hear.) With regard to the circular referred to, of which he had not heard before, he had already given the fullest explanation he could as to the reason fo rthe falling-off in profits. Considering that something approaching between one-third and one-half of their men had been called up, and having regard to the great difficulties of communication which had been experienced, he personally was not at all dissatisfied with the results achieved. (Hear, hear.) At home they knew quite well that there was not a single trade carried on even at approximately the same cost as before the War. His own experience was that everything had risen enormously, and he did not think they could regard the costs at Kyshtim as having risen excessively. They had not the advantage which this country possessed of free sea communication and good railway facilities, but were practically dependent on one line of railway, and the way in which these difficulties had been surmounted reflected the greatest possible credit on their staff at Petrograd and Kyshtim. (Hear, hear.)

The Land Question.

He was sorry he could give no information with regard to the land question. Before the War broke out the negotiations were proceeding at a very slow pace. They had, it was true, sold certain outlying portions of land at quite considerable figures, but when they came to talk about the whole land question as affecting the estate and also to look at the question of the peasants' rights, and so on, they found the matter a very difficult one to deal with. He had recently been looking at the figures given in the statement which accompanied the original prospectus of this Company, and he was not at all sure that to-day he could put the matter any more definitely than was done at that time He had no reason to believe that any of those figures were inaccurate. On the other hand, these big political questions, especially in Russia, moved very slowly, and they could only wait, at the same time hoping that the solution of this question would come more quickly than they could anticipate at present. The directors would give careful consideration to the suggestion regarding the printing of the comparative figures in the annual report. It was impossible for him to state the exact number of men at Kyshtim who had joined the Colours, but it was a number which, he regretted to say, was continually increasing. At the present time the number might be approximately 2,500 men.

The motion was then put and carried unanimously.

The Chairman: The next business is the declaration of a dividend. The balance of the appropriation account is £208,498 13*s.* 3*d.* For the reasons which I have already given, the directors recommend that of this amount £145,786 13*s.* 3*d.* should be carried forward. I therefore move that a dividend in respect of the period ended January 13, 1915, of 1*s.* per share, free of income tax, be paid on November 1, 1915, to shareholders registered in the books of the Corporation on October 14, 1915, and to holders of share warrants to bearer.

Mr. D. J. Morgan seconded the resolution, which was unanimously adopted.

The Chairman next moved the re-election of Mr. A. J. Hugh Smith, Mr. Saveli Polak, and Mr. T. Blair Reynolds, the retiring directors. He mentioned that Mr. Hugh Smith had been given a commission in the Coldstream Guards and was now serving his country at the Front.

Mr. F. Stobart seconded the motion, which was agreed to.

On the proposition of Mr. Francis Moore, seconded by Mr. Reginald Scott, Messrs. Deloitte, Plender, Griffiths and Company were reappointed auditors.

Appreciation of Directors' Services.

Mr. Francis Moore proposed a vote of thanks to the directors, remarking that they had gone through a most arduous and anxious period and were entitled to the greatest sympathy of the shareholders. The shareholders had, he was pleased to say, some compensation for the difficulties which had been experienced, for they were deriving the advantage of the increased price of copper and of the work which the Company was doing for the Russian Government. He desired, of course, to include in the vote the directors who were rendering the Company such valuable service in Russia and who, he was glad to feel, were their staunch friends and had been for many years. (Applause.)

The vote, in which the staff were included, was seconded by Mr. Reginald Scott and unanimously adopted.

The Chairman, in acknowledging the compliment, said he was sure the best wishes of everybody in that room were with the directors of the Russian Company, who, perhaps, had had even more troubles and trials to bear than had been experienced by the directors on this side.

The proceedings then terminated.

COLTNESS IRON COMPANY, LIMITED.

THE annual general meeting of the shareholders in the Coltness Iron Company, Limited, was held on October 8 at Glasgow, Sir William H. Houldsworth, Bart, LL.D. (the Chairman), presiding.

The notice convening the meeting and the report of the auditors having been read,

The Chairman said: Gentlemen,—I presume you will all have copies of our report and balance sheet for the year and that you have taken an opportunity of looking through the figures and forming your own opinions as to the results.

Increased Gross Profit.

Taking the gross profit first, you will see that it is £160,341 2*s.* 11*d.*, and I compare that figure with £95,117 4*s.* 8*d.* in 1914 and £157,101 17*s.* 7*d.* in 1913. This year we have put £5,000 to reserve for furnace repairs. In previous years we only put £3,000, but it was thought desirable, owing to the special circumstances connected with the works, that it would be better to be on the safe side on this occasion. We have also increased our redemption and depreciation this year, and have taken off £48,994 17*s.* 11*d.* instead of £38,146 1*s.* 8*d.* last year and £45,834 9*s.* 10*d.* in 1913. That gives us a net profit this year of £106,346 5*s.*, as against £108,267 7*s.* 9*d.* in the good year of 1913 and £53,971 3*s.* in the rather worse year of 1914. The balance from last year is about the same as the balances we have carried forward in previous years, £17,254 6*s.* 5*d.* That gives us a divisible profit of £123,600 11*s.* 5*d.*, as against £125,283 3*s.* 5*d.* in 1913 and £71,004 6*s.* 5*d.* in 1914. We come now to the way in which we deal with this £123,600 11*s.* 5*d.*, and compare it with what we did in the two years I have named.

Large Allocation to Reserve Fund.

In the first place, we put to the reserve fund £45,000 this year, as against £30,000 in 1913, while last year we were not able to put anything to reserve at all. After the ordinary deductions have been made, namely, interim dividends on the First and Second Preference shares and Ordinary shares, we come to deal with a balance of £51,725 11*s.* 5*d.* From that balance, after having made full provision for the reserve and for any emergencies in the future we can contemplate, we propose a further dividend of 4% and a bonus of 2%, which will take up £21,000, thus making a division all over of 10%. We have endeavoured not to be over-sanguine by dividing too much, and we have sought to look carefully forward to the future, as I am sure you would wish us to do. At the same time we thought it right to give a fair amount to the shareholders, particularly as we had made a profit to justify it. Some people appear to think that this year industries are going to have great war profits, as they call it. I can only say that although we have had a good year I cannot see any indications in our works of exceptional profits. Our results do not show any great advantage in war profits. No doubt the price of iron is higher, but when you go into the accounts, as we have to do, there is a great deal to be set off against that higher price, especially in our other departments, where we are suffering from the war. I don't know how far the profit we show this year comes directly from the war. I doubt if very much comes to us from that source, because, as I have pointed out, we had also a good year in 1913, when there was no war. We have less production in every one of our departments owing to the scarcity of labour, and that of course means increased cost.

Scarcity of Labour.

In all our departments we have felt the scarcity of labour very keenly, and the shortage of men is, as you know, still

continuing. Then, too, the shortage of waggons has been a difficulty that we have had to meet. In regard to our Warwickshire coalfield, which is in the process of development, the progress made has been quite satisfactory. We have experienced some difficulty with water in sinking the pit, but this has been most successfully and ingeniously overcome. With these remarks I beg to move the adoption of the report and balance sheet.

Mr. Henry E. Gordon, of Aikenhead, seconded the motion, which was adopted.

The retiring directors, Captain James Hamilton Houldsworth and Major Henry Hamilton Houldsworth, were re-elected, and the auditors, Messrs. Kerr, Andersons and Macleod, C.A., reappointed.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.

The thirty-fifth ordinary general meeting was held on October 13 at Winchester House, Old Broad Street, E.C., Lord Ribblesdale (Chairman of the Company) presiding.

The Chairman said it would be seen from the report that the Company had had a year of ups and downs, but that, on the whole, they had come through very well, considering the various circumstances prevailing. There had been a falling off in the coaching traffic, while the goods traffic had maintained its figures owing to increased receipts from coal. A marked decline had taken place in the receipts from the carriage of building materials, no new building work at present being done. In the railway, besides the falling off of receipts, they had had to face an increased expenditure under the heading of maintenance of way and works and locomotive expenses. With regard to the collieries, it would be seen that there had been a large expansion in the coal output, from which it would be gathered that they had to an extent overcome some of the difficulties of which he spoke at the last meeting. Costs of production, he was glad to say, were getting lower, and that was a point to which they paid very great attention. The sales, while they showed an increase on those of previous years, were not up to the increase in production, the obvious reason being that a Company which had to arrange its sales programme some time beforehand could not take any immediate advantage of an improvement in output, and, therefore, the greater part of the increase merely went to stock. To sum up the Company's position generally, the result was not quite so good as in the previous year. However, all companies must have their fluctuations. The result of the year was a profit of £102,401, against £104,011 in the previous year, or a reduction, in round figures, of £1,600. They had paid all their interest charges and Preference dividend, and also an interim dividend of 3 per cent. on the "B" shares in March last. They now proposed to pay a final dividend of 2 per cent. on the "B" shares, making 5 per cent. in all, and to carry forward £2,960. The reduction in the "B" dividend was, they considered, only of a temporary nature, due, broadly speaking, to outside causes known to everyone. In conclusion, he said he felt fairly confident that they would resume their ordinary and steady business, and, indeed, continue it, war or no war.

Mr. Walter Butler, M.I.C.E., seconded the motion, which was carried unanimously.

LINGGI PLANTATIONS, LIMITED.

An extraordinary general meeting was held on October 12 at Winchester House, Old Broad Street, E.C., for the purpose of considering the following resolutions :—(1) "That the capital of the Company be increased to £200,000 by the creation of 750,000 additional Ordinary shares of 2*s.* each." (2) "That the agreement intended to be made between the Port Dickson-Lukut (F.M.S.) Rubber Estates, Limited, and the liquidator thereof of the one part, and this Company of the other part (which agreement has been produced to and explained at this meeting), be and the same is hereby approved, and that the directors be and they are hereby authorised and directed to enter into such agreement, and to carry the same into effect, with or without such modifications as they may approve, whether before or after the execution thereof." Sir William Hood Treacher, K.C.M.G. (the Chairman), presided.

The Chairman said : This meeting is called for considering and, if thought fit, passing two resolutions which are set out clearly in the notice which was issued under date of October 4. The first resolution is for the increase of the Company's capital from £125,000 to £200,000. In regard to the issued capital, however, the increase will be strictly limited to the amount that is necessary to provide the consideration for the purchase of the two estates. The consideration in each case will be satisfied by the allotment of shares. The amount required for this purchase will be approximately £20,000, in 200,000 shares of 2*s.* each. The issued capital will thus be increased to £140,000. The capital position will then stand as follows :—

Authorised capital	£200,000
Issued capital	£140,000
Unissued capital	£60,000

Your directors deemed it wise to take this occasion to recommend an increase in the authorised capital to such an extent as would provide an ample margin of unissued capital, so that in the event of further sums being required at some future date for the development or extension of our business an issue of Ordinary shares could be made without again going through the formality of increasing our authorised capital. The second resolution before you is for the approval of an agreement which the directors have entered into for the purchase of the Port Dickson Company's estate and assets on the basis of one Linggi share for ten Port Dicksons. The board of this Company have gone very carefully and fully into the proposal and have been guided by the views and opinions of the visiting agent, Mr. Macfadyen.

The Planted Acreage.

When addressing you at the last annual general meeting I told you that the capital cost of the planted area of 7,400 acres worked out at the low figure of £16 4*s.* per acre. Including the extensions in progress, the proposals now before you, if adopted, would reduce this to £11 14*s.* per acre, a reduction of approximately 25 per cent. The low capital cost of its planted area has always been a feature of strength to this Company. You will appreciate, therefore, the significance of this further substantial reduction. Our output, as you will observe, will by the year 1920 be very nearly trebled. Moreover, we feel that we are in the advantageous position of being in possession of ample funds to undertake all necessary and desirable works to bring the new estates into a higher state of cultivation, reduce the costs, and increase the revenue-earning capacity of the properties under consideration. I might at this stage remind you that it has been the policy for some years past for the Linggi Company to add to its planted acreage by purchase. We have been able to do this because of our favourable financial position, and, looking back on the history of the Company, I think we might fairly claim it has proved to be a successful policy indeed.

Directors' Position Explained.

Coming back to the more immediate question of the proposed acquisition of Port Dickson, as you are aware, three of your directors are also directors of the Port Dickson Company and shareholders in the Port Dickson Company. Their registered holdings are as follows :—Mr. C. Malcolm Cumming, 34,144 shares; Mr. Robert Frederick McNair Scott, 5,538 shares; and myself, 8,410 shares. To this I may add that Sir John Anderson is also a shareholder to the extent of 18,041 shares. We are anxious in our procedure to avoid being open to a suggestion from any source that your interests would thereby be prejudiced. When the proposal to acquire Port Dickson was first submitted to your board we immediately appointed a committee, consisting of Messrs. Trotter and Traill, neither of whom is in any way connected with the Port Dickson Company, except that Mr. Traill has a nominal interest of £40 in that Company. The final recommendations of that committee were accepted by the board without amendment and are embodied in the agreement which you are now asked to approve. The committee and the board, I need hardly add, were greatly assisted and guided by the advice of Mr. Macfadyen. We are confident that this acquisition will prove of benefit to this Company. It will enlarge your planted acreage considerably without involving a very considerable addition to your issued capital.

Mr. Noel Trotter seconded the resolutions, which were carried by the requisite majority.

The proceedings then terminated.

INCH KENNETH RUBBER ESTATES.

The eleventh annual general meeting of the Inch Kenneth Rubber Estates, Limited, was held at Edinburgh on October 11, Mr. William Greenhill, the Chairman of the Company, presiding.

The Chairman, in moving the adoption of the report and accounts, said : A disturbance with labour in the East on the outbreak of war had a detrimental effect upon the output for a short period. Another matter to which I desire to call your attention is the action of the German cruiser *Emden*, which was responsible for sinking the s.s. *Troilus*, on which vessel the Company had a consignment of 11,730 lb. As this rubber was not insured against war risks a total loss was sustained.

During the year no further land has been acquired and no new developments of the Company's estate have been undertaken. This Company was one of the pioneers of this industry, and, along with other earlier companies, suffered by lack of experience. As shareholders know, the estates were very thickly planted at the inception—in fact too thickly planted—and operations have now been going on for some time in thinning out.

The crop for the year has amounted to 255,402 lb., including the *Troilus* consignment, which was very considerably under the estimate expected by the managers, but exceeds the previous year's crop by 1,837 lb. No doubt the thinning out on a large scale and cutting out mature trees, together with the very conservative system of tapping, accounts for the managers being unable to obtain their estimate. For the current year their estimate is 320,000 lb.,

upwards of 60,000 lb. more than was ingathered last year. They speak very confidently of obtaining their estimate. During the year they will have the benefit of tapping 305 acres which were planted in 1910.

The cost of production for the past year f.o.b. has amounted to the satisfactory figure of 10.60*d.*, as against 15.50*d.* the previous year, showing a decrease of 4.90*d.* per lb., and as stated in the report the all-in cost has been 14.46*d.* Last year the crop realised a gross average price of 2*s.* 4.27*d.*, this year a gross average price of 2*s.* 2.26*d.*, being a decrease of 2*d.* per lb. Owing to the satisfactory financial position of the Company the directors were enabled during the year to repay at par £5,000 of the Company's Debentures.

The report was adopted.

CULLODEN CONSOLIDATED COMPANY, LIMITED.

The statutory meeting of the shareholders of the Culloden Consolidated Company, Limited, was held on October 8, at the London Chamber of Commerce, Cannon Street, E.C., Mr. A. A. Baumann presiding.

The Chairman said: Since the date of the formation of the Company in April, the capital value of your assets has increased very much; that value has increased something like 60%. The estimated value of your investments to-day is £293,000, as compared with the book value of £209,000 odd. We have reduced your liabilities by £20,000, and the gross revenue of the Company during the five months we have been in existence has been £15,000. That, I think, is a very good showing, although in these days one ought to be very careful how one admits having made any money at all. Personally I do not apprehend that this Company can come within the scope of the excess profits tax, for two reasons, either of which would be sufficient to exclude us from the sweep of the Chancellor's net. The first is that we are a new Company, and, therefore, have no three years to go back upon; nobody can charge us with having made excess profits. The second reason is that we are a share-holding Company. We do not trade; we are a trust Company holding shares in other concerns, and if we were to come within the excess profits tax it must be obvious, I think, to you all that we should be taxed twice over. Our holdings in the other companies may have to pay the excess profits tax, but to my mind it is inconceivable that a shareholding trust should also be subject to excess profits tax. How far this excess profits tax will affect our revenue in the future it is impossible for me to say. The younger and progressive companies, of course, it is admitted, are those which will bear the brunt of the new taxation. We are, however, fortunate enough to have some very big holdings in the larger and older companies, whose profits have shown a falling off since the boom year. Therefore, I do not think that this new tax will affect our revenue so very seriously unless the tax is going to be continued for a long time, which I hope is not going to be the case. But if the tax lasts only for a year or two years, I do not think that it will very materially reduce your prospects of revenue. There is only one other point about which I should like to say a few words. You are not allowed to deal in your shares on the Stock Exchange owing to the unaccountable, unreasonable, and apparently capricious conduct of the Treasury Committee appointed to regulate fresh issues. Twice we have made application to the Treasury Committee, and twice our request has been refused without any explanation. Twice I have written to the Chairman, Lord St. Aldwyn, giving him a full and detailed account of our application, showing him that no money was wanted, and I have not received even the courtesy of an official acknowledgment—a want of courtesy which, I am happy to say, is rare in the public life of this country.

MISCELLANEOUS.

Aerated Bread Co.—Dividend of 1*s.* 6*d.* per share, less tax, makes 17½% for the year.

Alliance Investment Co.—Interim dividend at rate of 4% per annum on Deferred stock.

American Mortgage Co. of Scotland.—Interim dividend on Ordinary at rate of 8% per annum, less tax.

Anglo-American Debenture Corporation.—Interim dividend at rate of 5% per annum, less tax, on Ordinary.

Benger's Food.—Interim dividend on Ordinary at the rate of 1*s.* per annum, tax free.

Borax Consolidated.—Dividend at the rate of 6% per annum, less tax, on Preferred Ordinary.

British Empire Trust Co.—Dividend on the 5% Cumulative Perpetual Preference at rate of 5% per annum.

British North Borneo Co.—Dividend of 2½% for year.

Dominion Steel Corporation, Ltd.—Dividend of 1½% on Preference shares.

Eastman Kodak Company of New Jersey.—Extra dividend of 10% upon the Common stock.

Eastern Produce and Estates Co.—Interim dividend 6%, less tax.

Furness, Withy and Co.—Quarterly dividend of 6*d.* per share.

Glenshiel Rubber Estates Co.—Interim dividend of 10% (actual), less tax.

Highland Distilleries Co.—Dividend of 5%, tax free.

Hope Brothers.—Final dividend at rate of 4% per annum, less tax, on Ordinary, making 4% for year.

Imperial Bank of Canada.—Dividend for the quarter at rate of 12% per annum upon the paid-up capital stock.

Indo-European Telegraph Co.—Interim dividend at rate of 5% per annum, tax free.

Industrial and General Trust.—Interim dividend on Ordinary stock at rate of 8% per annum, less tax.

Investment Trust Corporation.—Interim dividend on Deferred stock at rate of 11% per annum, less tax.

Kali Glagah (Java) Rubber and Produce Co.—Dividend of 5%.

Las Cabezas Estancia Co.—Dividend of 4½%, less tax, for half-year, making 8½% for year.

London and Lancashire Fire Insurance Co.—Interim dividend of 14*s.* per share, less tax.

London Trust Co.—Interim dividend at rate of 4% per annum on Deferred stock.

Milwaukee and Chicago Breweries.—Interim dividend of 2% on capital stock.

Murray (D. and W.).—Dividend of 6% on Ordinary, making 10% for the year.

Nantyglo and Blaina Ironworks Co.—Dividend of £3 per share on Preference on account of arrears.

Nordanal (Johore) Rubber Estates.—Interim dividend of 5% (actual), less tax.

North of England Trustee Debenture and Assets Corporation.—Interim dividend of 4*s.* per share, less tax.

Northern Assurance Co.—Interim dividend of 3*s.* per share, less tax.

Oriental Telephone and Electric Co.—Interim dividend of 4% on Ordinary shares, free of tax.

Pears (A. and F.).—Dividend for half-year on Ordinary shares at rate of 20% per annum.

Riverside (Selangor) Rubber Co.—Interim dividend of 10%, less tax.

Rosario Drainage Co.—Dividend on Ordinary at rate of 3%, less tax.

Second Scottish Northern Investment Trust.—Interim dividend at rate of 5% per annum, less tax, on Ordinary stock.

THE FINANCIAL POST OF CANADA,

THE SIGHTS OF LONDON

It has been said that the best way to see London is from the top of an omnibus.

The London General Omnibus Company has prepared a booklet giving in tabulated form the story of London's main thoroughfares. It is replete with interesting notes on the streets and their buildings as they exist to-day, and also of their history and associations in the past.

A TOUR THROUGH THE CENTRE OF LONDON BY MOTOR-BUS

is the title of the booklet, which should prove a veritable guide, philosopher and friend to the visitor, while Londoners themselves will glean from its pages a multitude of little-known facts concerning the great city in which they dwell.

Copies of this booklet may be obtained free of charge on application to the Station-masters on the Underground, or to

NEW ZEALAND.

A Wealthy Country, Splendid Climate, Fertile Soil, Plenty of Water.

An Ideal country for the farmer, the percentage of grain and lambs being phenomenally high.

New Zealand, a country as large as the United Kingdom, with but a million population, has an annual export of raw products exceeding Twenty Million Pounds sterling.

NEW ZEALAND is rich in COAL, IRON, TIMBER, GUM, GOLD and SILVER.

Total yield of Minerals, over One Hundred and Twenty Million Pounds.

Over Eighteen Million Pounds have been advanced by Government to Farmers and Workers for Improvements and Buildings at a low rate of Interest.

The Railways, 3,000 miles, Telegraphs and Telephones, 124,000 miles, are owned and operated by the State.

New Zealand has the highest wealth-rate and the lowest death-rate in the World.

To those desirous of making a home in a new country New Zealand offers solid advantages.

Excellent Steamship Services are run direct to New Zealand by the Shaw Savill and Albion Company, Limited, New Zealand Shipping Company, Limited, and the Federal and Shire Lines.

Full information is supplied free by

MONEY.

WHAT NEXT?

ONE thing has become clear in the course of a rather puzzling week in the Money market, and that is that the state of affairs is one that cannot possibly continue. The Treasury or the Bank of England, or whatever the power now is that rules in Lombard Street, has been trying to do two quite incompatible things, with the result that neither of them has been successfully accomplished. The ambition of the monetary Dictator apparently was to keep the rate

for loans at 4½%, and yet enable Treasury bills to be sold, likewise at 4½%. It might have seemed to be rather obvious that Treasury bills would not be very freely saleable at 4½%, unless those who bought them were enabled, by getting money to carry them with a little cheaper, to make a living. This was a practical consideration which was not allowed to weigh; 4½% was to be the rate both for short money and for Treasuries.

This policy might perhaps have been successfully carried through if an attempt had been made by getting at the genuine investor to tap a supply of real money for placing Treasury bills instead of relying on dealers in credit, who want to carry them with borrowed funds. If Treasury bills of a lower denomination than £1,000 had been offered over the counter, it is possible that a large and increasing business might have been done with investors who are saving for the next War Loan, and would have been glad of small Treasuries to put their money into in the meantime. But this was not done. Something had to happen, and what did happen was that the ring lately formed, within which short money was not to be cheaper than 4½%, was broken.

In the circumstances perhaps it was the best thing that could have happened. If it is desired to attract money to London it is no use to enact, by arbitrary ukase, that money is not to be lent below 4½%, unless at the same time it is possible to ensure that money can be lent at 4½%. If money is to be left here it must be able to be employed. But this cannot be brought about in a market flooded with artifically created credit by merely pretending that inflation does not exist and saying that 4½% is to be the rate. The only result of that policy was that the market froze into stagnation, with borrowers and lenders alike frostbitten and unable to move. Such a market is not a place where anyone with any choice in the matter would be very anxious to try to place funds. But when the agreement was broken, apparently by the secession of some of the colonial banks, then it seems to have been intimated that the Bank of England would borrow at 4½% any surplus that the clearing banks had over. Then at once the market began to prick its ears up. Money became mysteriously scarce. How much the Bank of England borrowed before it began to lend is a mystery that no one can guess; but it is generally believed that it has both borrowed and lent to a small extent, so increasing still further the intricacy of an extremely confused and unsatisfactory position.

It is generally expected that the rate for Treasury bills will be raised on Tuesday next, when the final instalment will be paid on the War Loan; and a rise in Bank rate in the near future is also looked upon as one of the possibilities in a position in which all things are possible. At first sight it would seem to be incredible that there should be any hint of a likelihood of a rise in Bank rate at a time when the low level of the Exchequer balances shows that borrowing by the Government, in one form or another, is inevitable in the very near future. Whether it be Treasury bills or Exchequer bonds, or a new War Loan that is going to be offered, a rise in Bank rate will be an equally inauspicious herald of the newcomer's approach. But the believers in a rise in Bank rate say that it will be caused by its expected effect on the New York Exchange. The limitations which at present modify the power of Bank rate to affect the New York exchange have frequently been pointed out by us. It may do something, especially if it is loyally backed up by the market: but it is rather like trying to put out a fire with a toy squirt. The only thing that will really cure the malady from which the New York exchange is suffering is a reduction of the imports from America or an increase in our exports to America, or both. These things can only happen through a drastic reduction in our consumption, and it seems that this can only be brought about by really vigorous taxation or a forced loan. In the meantime it is satisfactory to note a further big reduction in the Bank of England's holdings of securities, though it is, of course, impossible to know how far this movement has been caused by the Bank's borrowing.

BANK OF ENGLAND.

The figures shown in Thursday's return are interesting in many respects. Partly owing to a reduction of 50 millions of Treasury bills, the public deposits have fallen £24,731,000, making a reduction of 70 millions in three weeks. This large release of money out of public deposits enabled the market to reduce its debt to the Bank of England on Government and other securities to the extent of £23,000,000. The Government securities, at considerably under £19,000,000, are the lowest since January last, whilst the other securities at £98,618,000 are lower than at any time since the end of August of last year. Besides paying off these large amounts to the Bank, the market also lost a million through a decrease in the reserve, making the seventh consecutive weekly diminution. The loss of reserve was due to an export of £1,346,000 in gold, off-set by a return of £276,113 in sovereigns from the country, whilst the note circulation is practically unaltered. In consequence of the large reduction of the deposit liabilities the ratio is more than 3¾% higher, at within a fraction of 31%, which is the highest ratio since February last.

The following rates of exchange are current in New York:—

New York on—		Rate Oct. 21	Par as usually quoted	Discount %
London ...	sight	$4 67	4 86¼ dollars for £1	4 0
„ ...	cables	$4 67⅛		
„ ...	60 days	$4 64⅛		
Amsterdam ...	sight	41c.	40¼ cents for 1 guilder	Prem. 1·8
Berlin ...	sight	82½c.	95 cents for 4 marks	13·4
Paris ...	sight	5 8⅝fr.	5.18 francs for $1	13·5
Mexico ...	Mex. silver $	37½c. U.S.	50c. U.S. for 1 Mex. $	25·0

Rates for prime commercial paper and for call loans in New York are as follows:—

Oct. 21, 1915 ...	Prime paper ...	3–3½%	Call money ... 2%
Oct. 22, 1914 ...	„ „ ...	6–6½%	„ „ ... 6–6½ %

POSITION IN INDIA.

The reduction of 10 lacs in the amount of Council bills offered on Wednesday last was accompanied by a reduction of nearly 100 lacs in the tenders. The allotment was made at the same rates as a week ago, but applicants at these rates got rather a bigger percentage on allotment. The last return of the Currency Department shows a further reduction in the note circulation; the total is 17 lacs down at 6,278 lacs. This contraction in the note issue was offset by a reduction of 17 lacs in the silver reserve, which has fallen to 3,672 lacs.

The following are the minimum Rates of Discount current in India:—

Bombay ... 5 per cent. (June 2, '15) | Bengal ... 6 per cent. (Sept. 24, '15

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, October 20, are:—

From **April 1** to **October 19** inclusive the Council granted remittances for **Rs. 6,37,95,297**, realising **£4,252,332**. Up to **October 20** of last financial year the total Bills and Transfers sold was **Rs. 5,80,71,861** realising **£3,874,591**. The total sales for the week ended **October 19** amounted to **Rs.5,00,000**, realising **£333,573**. The amount to be offered for tender next Wednesday will again be **40** lacs.

SILVER.

BAR silver, which has been steadily appreciating of late, largely in consequence of Mint orders, has this week fallen back to 23 13/16*d.*, which shows a net reduction of 3/16*d.* per ounce. The set-back is attributed to the fact that supplies are rather more plentiful in consequence of reduced buying of the United States Government. India has given no support and China has been a seller for choice. The chief support of the market has, therefore, been the British Mint orders, and these have not been sufficient to prevent the slight set-back referred to.

Stock Exchange.

PRICES in the General Stock markets show more instances of improvement than declines, and there have been special inquiries for some descriptions of foreign securities, both Governmental and miscellaneous. A great amount of attention has been given to Mexican and also Brazilian securities, and previously Argentine issues had experienced a recovery. In some descriptions of securities of companies operating in Mexico and Brazil it is believed that buying orders have been on Canadian account, various utility undertakings of those countries being controlled from the Toronto centre.

A considerable number of transactions have been put through in War Loan, and in part the activity is due to the drawing near of the end of the period wherein conversion rights can be exercised, and partly to the recognition that in market movements of late no allowance would appear to have been made for accruing dividend.

In Shipping shares the feature has been a declaration of an interim dividend at the rate of 4% by the Royal Mail Steamship Company, comparing with 5% for 1913, while last year no dividend distribution was made.

A good tone has continued in rubber shares, while the recent demand for tea shares has subsided, and here and there reactions have occurred.

The American department has continued strong, and although a good deal of stock has been sold from this side, it has been absorbed, and more has been asked for. The predilection of Americans for their own securities is well known, and, in the circumstances, that there should be a continued demand for all descriptions of Home securities by the American public is not to be wondered at, considering the remarkable crops of the country, the trade progress, and the fact that the railways will have as much work as they can cope with in the near future. There is the feature of record crops and a high level of prices pointing to very big profits to farmers, &c. Industrial shares in the United States are seldom touched by investors on this side, but in some of them there have been phenomenal movements, in especial Bethlehem Steels, which one day this week rose sensationally to a record price. Thursday's closing price was 583.

ALCOY AND GANDIA RAILWAY & HARBOUR.

THIS Company suffered last year from a variety of causes, and a dividend of 1% only was paid on the First Mortgage Debentures, as against 1¾% a year ago. In the first half of the year abnormally bad weather spoilt a large part of the unpicked oranges and greatly delayed the tomato crop, the result being that exports in these two articles alone suffered a decrease of over 23,000 tons. Then again there were labour troubles in the Spanish merchant service which for some weeks interrupted the coasting trade and caused a falling off in the Company's receipts; and just as matters began to improve the European War broke out, with the inevitable dislocation of trade, and consequent heavy loss to the Company both in railway and harbour receipts. In the following table is set out the main results of working for the last five years:—

Alcoy and Gandia Railway and Harbour.

	1914	1913	1912	1911	1910

Until the War is over, or, at any rate, until more normal shipping facilities are available, it is impossible to see how any real revival of prosperity can be experienced; nevertheless the directors are confident that satisfactory results will be obtained when the exterior causes disappear which have brought about the present set-back.

CLERGY MUTUAL ASSURANCE SOCIETY, 1829.
NO SHAREHOLDERS. NO AGENTS. NO COMMISSION.

By its new Act (1914) Past or Present Members of the
UNIVERSITIES and PUBLIC SCHOOLS,
as well as the
CLERGY AND THEIR RELATIVES,
are admissible to
ALL BENEFITS OF THE SOCIETY,
including the right to share in BONUSES.

"Without-Profit" Policies, open to the General Public, at exceptionally low rates.

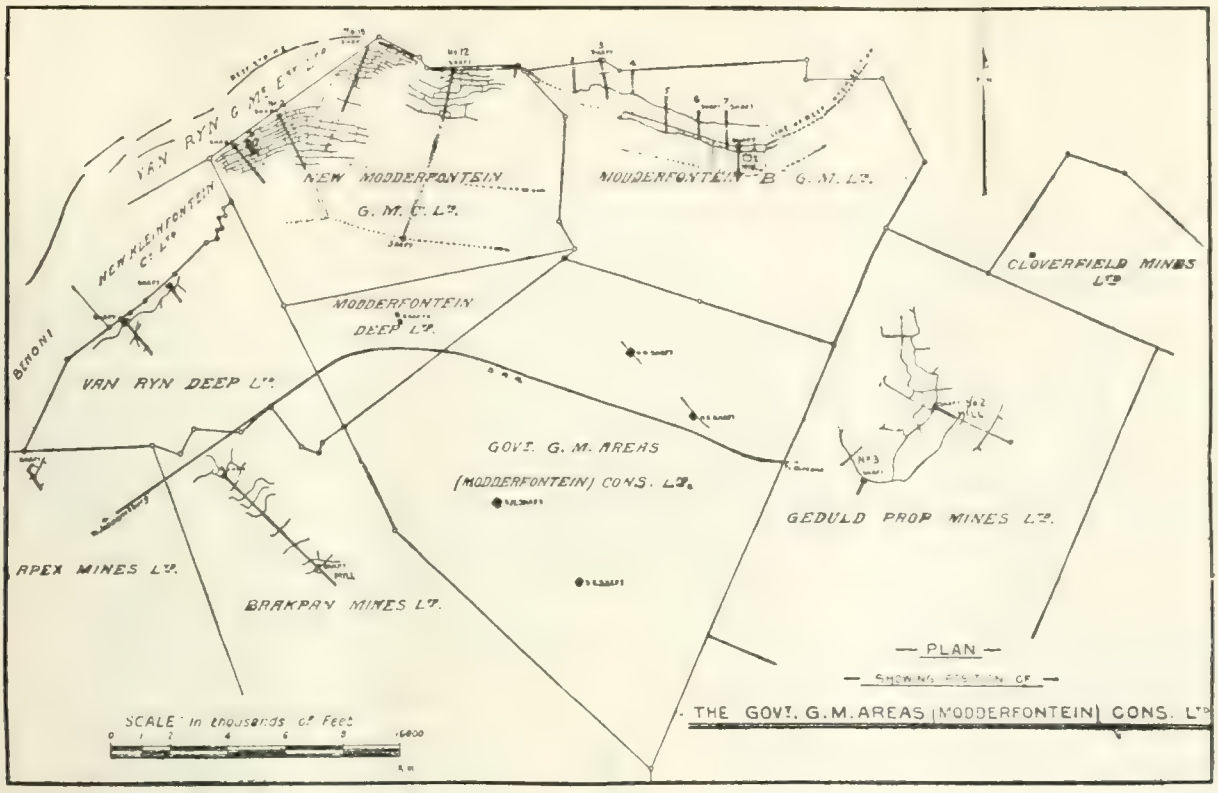
Mining Topics.

Except for the boomlet in Mexican mining shares, there have been no decided movements to record in the mining market. Rand shares have been hard. Super-added to the progress of the mines, the improved dividend outlook in several directions, the growth of labour supply, and the ability to effect economies, there has this week been the favourable influence of the Cape Election results, which give an accession of strength to the Government exceeding expectations. The South African and Unionist parties, together with the Independents who run with them, show a very much larger majority over the Nationalist and Labour parties than had been anticipated. At the time of writing the country returns have not come in, but already the returns from the great populous centres indicate that Government will have a considerable accession of support. Less attention has this week been given to the Far Eastern section than previously, but prices have been well maintained and the pause is not an unwelcome one. The last day or two Modderfontein B shares have again hardened, but Modderfontein shares remain at about the level of near to £15. In small priced shares there has been a renewal of the demand for Knight Centrals, but what exactly is the position upon which the demand is based is not clear. Private advices from Johannesburg report developments as being of a very satisfactory nature, but why have official results not been made known to shareholders? Nothing so far has been officially announced upon which an opinion can be based as to where the developments are so satisfactory as is alleged to be the case.

We briefly called attention last week to the changed condition of the market for Mexican mining shares, and this week in subsequent columns we devote some space to a consideration of the positions of the more important mining undertakings. Heretofore Goerz shares have experienced a recovery on the outlook for some of the Rand companies in which it is interested, but this week a further sharp rise has occurred, due to the hope that its Mexican La Fé mine will be able to resume operations if the political situation, as is hoped, distinctly improves. It is understood that the La Fé mine is in no wise damaged.

Last month it was announced that owing to labour troubles operations at the Arizona Copper mine were suspended; as to the reason of this no information was vouchsafed, but the *Engineering and Mining Journal* of New York, just to hand, throws light on a dark subject. Apparently a general strike has been declared in the Clifton-Morenci district affecting numerous American companies as well as the Arizona. The chief reasons for the strike seem to be the employment of non-union men and a demand for higher wages. Violence has been resorted to, and the managers of the important mines have had to leave for another district, where, by some process of American law, they were arrested as fugitives from justice. Seemingly attempts have been made to dynamite the Arizona's mill, though no damage is reported. In view of the turbulence of the situation a statement by the directors of the Arizona Copper Company would be welcome.

* * * Owing to exigencies of space we give an article on Oroville Dredging mine at page 390.



VAN RYN DEEP.

In recent numbers of The Statist we have dealt with the Far Eastern Rand in general and individually in more or less detail, *inter alia*, with New Modderfontein, Modderfontein B, Geduld, and Modderfontein Deep. We will now recapitulate our latest views as to the position and prospects of the Van Ryn Deep.

This Company, in its present form, is the outcome of a consolidation and reorganisation of capital of two adjoining deep-level undertakings, formed in 1902, which owned area immediately south of the New Kleinfontein and south-east of the Benoni. Areas to the south of the Van Ryn Deep's are those of the Apex and the Brakpan, while those of the Modderfontein and Modderfontein Deep lie to the east. The position of the area will be clear from the accompanying map.

The reorganisation of 1908 was based on a nominal capital of £1,750,000, and of this nominal amount 1,496,114 £1 shares were issued to the shareholders of two old companies or for the provision of further working capital resources. The initial vendor consideration had been a very heavy one and initial working capital resources quite inadequate. Then there came the recognition of necessity to rectify such position when, with a heavy capitalisation, there was a long-maintained indisposition on the part of the public to subscribe further working-capital resources necessary. Eventually, at the close of 1911, it was resolved to scale down the capital. This was done by giving two new shares for each five formerly held, thus reducing the issued capital to 40% of the previous amount. This reduced the cost of property, plus amount spent, to £598,446. Then to secure necessary cash for development and equipment 598,446 new £1 shares were issued at the price of 21*s.* per share, the issue being guaranteed for a commission of 1*s.* per share, and the outcome was an issued capital of £1,196,892, at which amount it has since remained.

With the capital thus provided in 1911 shaft sinking and development of the property was actively proceeded with. Previously the property had only been played with, but, while in the early days of the Company there had been inertia and indecision, this cannot be said to have been the case since 1911. So rapidly was development and shaft sinking pushed forward that by the end of 1912 over a million tons of pay ore had been brought into sight, and there was the gratifying feature that from start of active work developments almost uninterruptedly from quarter to quarter showed improvement. By the time the up-to-date mill erected by the Company was ready for work—that is

about the middle of 1913—upwards of 1,400,000 tons of ore reserves were reported in sight. The rapidity of construction of the mill of 80 stamps and eight tube mills, having regard to the size of the plant, was a record. Crushing was commenced in the middle of July 1913. What result was shown for the remaining part of the year is valueless for purposes of comparison, but by the beginning of 1914 the plant had thoroughly got into its stride, and for the whole of that year 483,090 tons were dealt with, while, as a result of improvements made, its yearly capacity is now approximately 530,000 tons. Having thus briefly surveyed the history of the Company up to the stage of milling, we may refer to features of the mine itself.

The mine has been opened up by two shafts very close to its northern boundary, and as the reef has a flat dip in this region both these shafts are inclined. The approximate position of the shafts is as under:—

West Boundary		West Shaft.		East Shaft.		East Boundary
	3,500 feet	■	2,000 feet	■	5,500 feet	

At June 30, according to the quarterly report, the western inclined shaft had reached a depth on the incline of 3,884 feet and the Eastern 3,724 feet, and as a result of such depth being attained the position of the main haulage drive has been decided upon at the seventh level.

So far as developments have been reported, those to the west of the West shaft have been in low-grade ore, but the bulk of the work has been concentrated upon the opening up of the central and eastern sections of the property. There are indications that in depth the grade of the ore at west is improving; for, according to the statement at the last annual meeting, a winze 1,000 feet west from the West shaft at the fifth level showed "a remarkable improvement in value." It was also stated that "the values exposed in the central and eastern sections of the mine are all that could be desired." In the quarterly report for March last it was mentioned that a winze from the seventh level east of the West shaft for the first 59 feet indicated an average width of 61 inches and an assay value of 97*s*. 9*d*.—exceptionally high width and assay. The fifth level, driven to east of the East shaft, had reached within 1,000 feet of the eastern boundary, and had, for the distance driven, shown "steady improvement" in width and value. What was shown at the sixth level cannot be stated, for that level is being driven in a straight line under the reef, in order to avoid the undulating course of the ore body. The Company, since the commencement of milling, has ceased to give quarterly development results, but we give them so far as reported—that is to the end of 1913—as indication of the true ore thickness as exposed in the driving:—

	Total Footage Sampled	Stoped	Payable Width Feet	Payable Width In.	Assay	Total Width Feet	Total Width In.	Assay
1912.								
Dec. qr. ...	5,266	2,562	1,657	18·7	127,6	1,241	154	17,8
1913.								
Mar. qr. ...	5,269	3,092	2,571	25·0	163·4	521	[illegible]	9 9
June qr. ...	4,674	2,555	2,085	24·0	94·4	270	22·4	17 5
Sept. qr.	—	1,482	1,697	18·0	119 5	285	15·0	22 6
Dec. qr. ...	—	1,350	1,350	20·0	100·5	—	—	—

The ore-reserve position is not set out in the report for 1914 so clearly as it might be. Initially the Company gave a calculation of its ore reserves based on mine tons. Then this procedure was modified and the basis of mill tons was taken, such mill tons representing the net quantity after elimination from the mine tons of 15% for sorting. At December 31, 1913, the basis of 55 inches stoping width was mentioned and the *assay* value of the gold contents given. At December 1914 the *recovery* value was substituted for assay value. The assay value of 1913 was 42*s*. 11*d*. while the recovery value of 1914 was 36*s*. The basis of stoping width of 1914 was not stated. Now all this is bewildering, especially bearing in mind that in the past the Consulting Engineer put forward an estimate of what would be the recovery based on 84% extraction of the assay value. Eighteen months to two years ago we dealt with this matter very fully, calling attention to what we considered was the extremely low rate (84%) of percentage recovery estimated, and pointed out what it would be with a 94% extraction; and that we were right in our surmise of the 84% basis being an extremely low one is shown by the fact that the actual percentage of extraction for the year 1914 is given as 96.3%. Of course, this latter rate is on the actual rate of extraction of the ore dealt with in 1914, and not on the ore reserves.

Bearing in mind that in 1914 some 483,000 tons were milled, it is satisfactory to notice the reference to reserves in the Chairman's speech in May last as under:—

> "The ore reserves at the end of the year amounted to 1,692,319 [illegible] tons, [illegible] estimated recovery value of 36*s*. per ton, against 1,660,767 tons, estimated at 35*s*. recovery value at the end of 1913.

The Consulting Engineer in his report said:—

> "At the end of the year development had reached a stage where only a comparatively small amount of driving will be required to enable further large additions being made to the reserves."

We may now record the progress shown in production since the beginning of production in July 1913, for the table we give will be useful for reference in connection with subsequent figures.

	Tons Stps.	Milled	Sorting %	Revenue Amt.	Per ton	Expenses Amt.	Per ton	Profit* Amt.	Per ton	Price end of Period

Dividends—1914, June, 12½; Dec., 12½ per cent.
1915, June, 15 per cent.

* Sundry revenue included.

The results and appropriations for 1914 and estimates for 1915 are set out below:—

1914—Year to December 31.

	£	Per Ton
Gross receipts (483,090 tons)	806,372	33/5
Expenses	399,613	16/6
Mine profit	406,759	16/9
Sundry net revenue	6,983	
	413,742	
Donations	£1,305	
Phthisis account	4,522	
Taxes	38,269	
Dividends (25%)	299,223	
	343,317	
Less development suspense	15,525	
	327,792	
Surplus	85,950	
Balance brought forward	46,986	
Balance carried forward	132,936	

1915—Estimate (on about 520,000 tons):—

		£
Mine profit, 9 months		389,000
3 months at £42,666 per month		128,000
Equal to 19*s.* 11*d.* per ton.		517,000
Sundry revenue		5,000
		522,000
Appropriations—		
Phthisis, &c.	£5,500	
Government and war tax	56,500	
		62,000
		460,000
Say for capital outlays		20,000
Applicable to dividends, &c.		440,000
Balance brought forward (unappropriated)		132,936
		572,936
Assume carried forward		152,936
		420,000
*35% dividend on capital, £1,196,892, would require		418,912

* A distribution of 15% for the June half-year has been made.

We will now turn to the important point of the question of life. In the Far East Rand region the dip of the reef into the ground is very flat. In the Van Ryn Deep area the shaft quite at the north of the property encountered reef at a depth of 1,700 feet. Approximately 6,400 feet to the south of the Van Ryn Deep shaft is the shaft of the Brakpan, where reef was encountered at a depth of 3,098 feet. This means that the average dip between the Van Ryn Deep and the Brakpan shafts is about 12 degrees. Each foot thickness of reef with a dip of 12 degrees represents some 5,470 tons per claim. It will be observed that in calculating the ore reserves a stoping width of 55 inches was officially assumed as a basis in 1913; this exceeds 4½ feet. Applying 4½ feet thickness, the gross ore contents per claim work out at 24,615 tons. After deducting 15 per cent. for sorting there would remain 20,924 mill tons per claim.

The Company's area comprises 764½ claims, but it would be unwise to assume that the area contains uninterrupted ore body. Some figure has to be assumed as a deduction for faults and unpayable zones of ore. If for such we deduct 20 per cent. of the 764½ claims, this leaves, say, 610 net claims assumed to be reef bearing, and to contain, say, 20,900 mill tons per claim. The showing of this would be:—

Recapitulation:—12° dip = 5,470 tons for 1 foot of reef width per claim.

5,470 tons × 54 inches = per claim	24,615	tons
Less 15% sorting	3,691	,,
Net mill tons per claim	20,924	

764½ claims less about 20 per cent. faults, say, 610 net claims.

	Tons.
610 net claims at 20,900 mill tons per claim =	12,749,000
Less used to December 31, 1914	768,000
Remaining January 1, 1915	11,981,000

With full plant in operation, using about 520,000 tons net quantity per annum, a little less than 12 million tons would last the mine about 23 years.

It seems reasonably assured, on conservative lines, that an average of 35 per cent. dividends may be assumed for a life of 24 years. If such be the case, the present value of the share, to give the investor 10 per cent. income and return of his capital by investing surplus dividend at 5 per cent. works out as below:—

Dividends per cent.	35 %
,, = per share	7 0
Present value of share (say)	2½

The present price of the shares is about 2½.

WOLHUTER.

Some small fluctuations have recently occurred in the shares of this Company, and it is represented that these have been due to nervousness as to whether the dividend would be maintained at the rate paid for the year to October 31, 1914—that is, 12½%. This uneasiness was last week dissipated by the declaration of a second half-yearly dividend of 6¼%, making 12½% for 1914-15, the same as for the previous twelve months. An explanation of the doubt may be that the profit per ton for the past twelve months was slightly under what it had been in the previous year.

Year to October 31,	1914	Per Ton		1913	Per Ton
	£			£	
Gross receipts	478,995	25/0	(340,950 tons)	450,399	26/5

The present price of the £1 shares is about 12*s.*

Burma Corporation.—The internal shaft at a depth of 441 feet from the 171 foot-level, or 612 feet from surface, is reported by cable to be in very high-grade ore again. Down the north end of the shaft for 72 inches width the ore assays 23 oz. silver, 30% lead, and 29% zinc. In the south end of the shaft, evidently in the wall of the ore body, for 72 inches width the assays are 5½ oz., 6% lead, and 14% zinc. The importance of the existence of very high grade at this, the lowest point in the mine, is obvious.

CITY AND SUBURBAN.

ESTIMATE OF 1915.

Although in recent months there has been a shrinkage in the price of the shares of this Company, the £4 shares being at present quoted about 2⅛, we cannot accept the somewhat prevalent idea that they are fully valued. In July last an official statement was put forward estimating the remaining ore contents of the mine as enough to last for "quite seven years." This was without making any allowance for an extra 2.7 claims which, in the opinion of the directors, are certain to be acquired. For the 15 additional claims it acquired from the City Deep it paid at the rate of £6,750 per claim, so that approximately £19,000 should purchase the 2.7 claims. The £101,250 paid for the 15 claims was provided out of profits.

The actual results of 1914 and an estimate for 1915 show that, apart from settings aside out of profits for capital expenditure, the clean profit would more than suffice to meet the 15% dividends that would call for £204,000 a year on the issued capital of £1,360,000. For convenience we set out the figures, and may here say that the estimate of 1915 is based on nine months' actual results and an estimate at the recent monthly rate for the remaining three months, the taxes, &c., also, of course, being estimated:—

Year to December 31.-	Estimate, 1915	Actual 1914
	£	£
Mine profit (341,000 tons)	249,000	(324,211 tons) 248,551
Sundry revenue	2,000	2,253
	251,000	250,804
Phthisis £6,500		£6,261
Taxes 25,000		23,326
	31,500	29,587
	219,500	221,217
15% dividends on capital, £1,360,000	£204,000	(15%) £204,000

Even if we make no allowance for the profit derived from the 2.7 additional claims acquired, and if we, further, only estimate an average annual dividend of 12½% for seven years, the present value of the £4 share, now quoted at, say, 2, works out at 2¼. The purchaser would enjoy an income of 10% and be able to set aside excess dividend and invest it for sinking fund purposes at 5% to redeem the price he paid for the share. The probability is that for the major part of the seven years there will be continuance of ability to show 15% dividends on the capital, but as the mine becomes worked out and there are less stoping faces the tonnage will probably have to be reduced, and dividends also. Hence a conservative course is to base value on the 12½% dividend average.

MEXICAN MINES.—I.

The expectation that the United States and the South American Republics will recognise General Carranza's Administration has raised hopes that the long drawn out "revolution" of Mexico will not last much longer. In consequence the securities of Anglo-Mexican undertakings, including mining shares, have this week received a considerable amount of attention. There are seven chief mining and kindred concerns whose shares are dealt in on the London Stock Exchange, all of which have paid dividends before and during the early part of the revolution which may be said to have commenced in earnest in the year 1912. The chaotic condition of the country since, leading to repeated interruption of communications with the mines, has greatly interfered with operations and intermittently all the mines have been shut down. However, from all reports it would appear that the mines themselves and their surface plants have not been damaged, and consequently, if the hopes of an early termination of the revolution are confirmed, mining operations will soon be in full swing again. The names and capitals of the principal undertakings and a contrast of their share prices now, before the European war, and in 1911, showing the tremendous depreciation that has occurred will be found in the following table:—

Market Prices.

	Issued Capital	Pre-Revolution High't Price 1911	Present Price Dec. 27, 1914	Sept. 25, 1915	Present
	£				
Buena Tierra (£1)	350,000		17/6	10/3	12/6
Camp Bird (£1 Ord.)	1,100,051	38/0	8/0	5/0	7/9
,, (£1 Pref.)	600,000		9/6		11/0
El Oro (£1) ...	1,147,500	28/6	14/0	7/9	10/6
Exploration Co. (£1)	750,000	17/6	8/9	7/3	8/6
Esperanza (£1) ...	155,000	42/6	15/9	9/3	10/9
Mexico El Oro (£1)	210,000	8/3	1/3	3/4	1/3
Santa Gertrudis (£1)	1,500,000	18/0	11/3	7/6	10/0

We have only sufficient space to deal individually with some of the concerns this week, and so reserve consideration of the remainder for a succeeding issue.

BUENA TIERRA.

This is the newest of the undertakings, and as 1912 was its first complete year of operation, it has from commencement been influenced by the revolutionary condition of the country. Nevertheless it has managed to earn profits in each of the past three years, and has paid two dividends of 5% each. The results obtained are shown below:—

Year to Dec. 31	Ore Hoisted Tons	Mining Revenue Per Ton	Total Working Costs* Per Ton	Working Profit £	Per Ton	Ore Reserves Tons
					Per Ton	
1912...	30,743	30/7	14/1	25,346	16/6	301,150

As shown above, the financial condition of the Company at the end of 1914 was sound, and the ore reserves in sight represented nearly 10 years for the rate of output attained in 1912. The value of the ore reserves is not given, but the General Manager stated that the tonnage of ore exposed "will show a higher assay value than that of the shipments made during the past year." The average content of the ore shipped in 1914 was 8.96 oz. silver and 11.7% wet lead, so that the mine is mainly a silver-lead and not a gold producer. With return to normal conditions the Company should be able to ship to the smelters more than 30,000 tons of ore per annum, and earn a working profit sufficient to pay 10% on its issued capital of £330,000.

EL ORO.

The El Oro Mining and Railway Company is an old established concern with a large property and the somewhat heavy capital of £1,147,500. In pre-revolution times its earnings were sufficient to pay regular dividends at the rate of 15% per annum, as will be seen from the following analysis of the last six annual reports and accounts to June 30, 1913:—

Years ended June 30.

* After deduction of office and sundry expenses.
† Includes profit from sales of investments.
(a) Includes 84,459 tons of accumulated tailings retreated.
(b) Includes 180,274 tons of accumulated tailings retreated.

At June 30, 1913, surplus liquid assets, excluding investments, amounted to £74,000. It will be noted that the ore reserve position in relation to the milling capacity is not strong, but a large portion of the properties, including the recently acquired Offir block, remains to be developed, and the indications reported in the 1913 report were good. At 50% discount the shares would be cheap if normal conditions were re-established in the country.

ESPERANZA.

In recent years the Esperanza has had a chequered career. For a number of years prior to 1911 very high profits and dividends were paid, but in 1911 a very heavy decline in the grade of the ore treated, and reduction in the value of the ore developed brought about a serious diminution in profits and dividends. Since then some good discoveries have been reported, but until lately nothing of sufficient importance to warrant enthusiasm has occurred. In the report recently issued, however, development indications on what is termed the Descubridora vein are disclosed which hold out some hope that the life of the mine may yet be longer than expected, but at present there is not a large tonnage of ore in sight.

MEXICO MINES OF EL ORO.

This mine, from the point of view of high percentage dividends paid, has in recent years been the show mine of the El Oro group. Its capital is small, having only lately been increased to £210,000 in £1 shares by the acquisition, for 30,000 shares, of the Oro Nolan adjoining claims protecting the strike of the ore veins in depth. The following table contrasts the results obtained since the commencement of production to the date of the last issued annual report, and shows how the profits earned have been allocated:—

* Accumulated development expenditure written off.
† Nine months' operations.

The Company paid dividends aggregating 18s. per share, or 90%, on the £210,000 issued capital, for the year to June 30, 1914, but no report or balance sheet was submitted for the year owing to the disturbed condition of the country. At June 30, 1913, however, the Company had £179,500 of surplus liquid assets, the balance sheet showing that plant, buildings, and machinery, which cost £143,995, had been written down to nothing.

The mining position of the Company, according to the last issued report and accounts to June 30, 1913, was strong, the ore reserves at that date amounting to 403,000 tons, valued $9.5 gold and $5.3 oz. silver. The mine workings were down to the 11th level at a vertical depth of 1,640 feet, there being a barren capping of about 300 feet of andesite between the top of the ore bodies and the surface. The 7th level and the levels above were practically fully developed, and had yielded about 575,500 tons of ore for the mill, or nearly 80% of the tonnage treated. In addition, at June 30, 1913, there still remained included in the ore reserves some 192,000 tons between the 1st and 7th levels. The contributions of the different levels to the ore reserves each year since 1909 will be seen below:—

Statement of Ore Reserves.

	June 30, 1913		June 30, 1912		June 30, 1911		June 30, 1910	June 30, 1909

The development disclosures reported in the

Mexico mine for the six years to June 30, 1913, are contrasted below:—

Development Disclosures.

Year to June 30	Total* Footage	Footage in Ore	Proportion to Total %	Gold Value $	Silver Contents Oz.	Price of Shares end of Period
1908 ...	4,360	1,700	39	11.0	9·0	4
1909 ...	2,751	1,033	38	12.6	9·7	6⅞
1910 ...	8,598	2,921	34	24.94	18·9	9⅜
1911 ...	11,208	4,626	41	14.54	10·6	7⅛
1912 ...	8,638	3,111	36	13.18	5·4	7
1913 ...	8,140	3,148	39	11.8	10·1	5½xd

* Excluding shaft sinking.

Both from the point of view of mining position and financial condition the Mexico Mines of El Oro may be said to be the strongest of the Mexican concerns, and this factor, together with the smallness of the capital, explains why the £1 shares even now command a high premium of 300%. The present quotation of £4¼, however, is about half that ruling in pre-revolution days. The shares are very largely held on the Continent.

EXPLORATION COMPANY.

This Company is a purely parent concern. It holds considerable interests in the Buena Tierra and El Oro mines, but it has also very large funds invested in the shares of copper companies and other mining undertakings outside Mexico. At December 31, 1914, the balance sheet showed the following position:—

Exploration Company, Position at December 31, 1914.

	£
Cash	112,617
Investments at book cost	652,575
Loans to subsidiary companies	39,676
Sundry debtors	6,426
Total	811,294
Deduct sundry creditors	4,872
Excess assets	806,422
Issued capital of £750,000 at market price of 7s. 6d. per share ...	281,250
Surplus	525,172

It will be noted that the Company's excess assets far exceed the market valuation of the issued capital, and this would still hold good even if one allowed depreciation on investments to the extent of 50%. The cash in hand alone represented 40% of the market valuation of the Company's capital, and in addition to this the Company holds 10,000 Inspiration Copper Company's shares having a market value of £80,000, and £87,000 in convertible bonds of the Chile Copper Company, which controls the huge Chuquicamata mine, an undertaking expected soon to become one of the largest copper-producers of the world. It is evident, therefore, that at 60% discount the shares are under-valued.

RAND DEVELOPMENTS.

LONDON, SATURDAY, OCTOBER 23, 1915.

TAXING CAPITAL.

THERE is a certain type of mind to which capital seems to be a thing that invites taxation. A capital tax is at all times a subject on which many amateur economists like to air their views, and in these days of war and huge expenditure, when everybody is looking for new sources of taxation and longing to suggest to the Chancellor some means by which he may tax somebody else, we find this old friend continually revived in one form or another. Not long ago there was correspondence in the *Times* about a tax on works of art and family plate, and last week Mr. Snowden, in the course of one of the interesting discourses with which he sets forth the Socialistic view of taxation, produced an elaborate plan for raising a tax of 500 millions on the capital wealth of the country which he very modestly estimated to be worth some 10,000 millions. His suggestion was, of course, for a graded impost, all capital values below £1,000 being exempt altogether, then beginning at 1% and grading as the super-tax is graded. He calculated that a tax of that kind, rising to 10% on amounts of a million, would bring in 500 millions, and he added: "There would not be much difficulty in doing that. I know the objections that will be raised to this suggestion. I know the objection in regard to capital that is invested in business; but that difficulty could be met by permitting the taxpayer to have two or three years in which to pay the tax."

Now, in the first place, there seem to be strong objections to a tax which is going to take two or three years in being paid; as a War measure in a War such as this, which eats up millions a day and continually clamours for more, the suggestion would seem almost futile if it had been put forward by a less clear-headed thinker. But the real difficulty about a tax of this kind has not yet been mentioned at all. This is the difficulty of valuation. Nobody can know what the price of anything is until he tries to sell it. There are some things which are being sold every day, and when we can be quite sure that they are exactly the same in value we can tell the value of all from the price at which those which are being sold are fetching. But there are very few things indeed of which we can be sure that one specimen is just as good as another. In the case of Stock Exchange securities we can be quite sure. One Chartered share is obviously of exactly the same value as another, and one £100 Consols cannot possess any advantage over another in the eyes of the most particular investor. But in ordinary commodities it seldom happens that this unity of value can be expected. Even a row of houses built an exactly the same pattern may not be all equally desirable. Some difference of aspect or light may make one more easy to let than another. And when we come to pictures and plate and furniture, and motor-cars and horses, the diversity of value is such that it would take an army of highly skilled experts to guess at an approximation of a fair value to place on them for purposes of taxation, and even then there would be a very wide margin of error. Moreover, skilful valuers are very scarce. We have heard of a case in which a deceased estate was being valued for death duty—or the local equivalent—in an Australian estate, and the legatees expected to be faced with a high valuation because the owner of it had collected, during occasional visits to England, a large number of water-colours by Turner, David Cox, and other well-known artists. To their great relief, however, the official valuer announced that, having looked carefully at the dates of the pictures, he had seen that they were all second-hand, and therefore had valued them all at 5*s.* apiece. This is only an extreme example of blunders in valuation, which would inevitably be common if all the capital wealth of the country had to be taxed in a hurry.

Of all the forms of wealth, then, in which capital is invested, the only one about which one can, in normal times, be at all sure of the real value, is Stock Exchange securities, or those of them in which there is a free market. But a very important section of them is at present subject to official regulations in the matter of price, which make their value also very largely problematical. It thus appears that any attempt to tax capital would be attended by so much expense and difficulty that it seems to be hardly a practical suggestion, even if it were desirable. But is it desirable? Do we want to penalise the man who acquires wealth if he happens to be a person of whose services the nation is now especially, but always greatly, in need? The only way (with an important exception, on which more anon) in which a man can acquire wealth is by rendering services to the community which it needs and pays for, and then by keeping part of the payment, and spending it, not on his pleasures and comforts, but on providing industry with the tools—in the widest sense of the word—that it needs for its existence. It is true that there are cases in which fortunes have been acquired by speculation, or market rigging, or worse, but that is the fault of the community, which only makes such things possible by its greed and gullibility; it is true also that some of the services for which the community pays highly are sometimes of a character which would not be so encouraged if we were more civilised and better educated. Such are bad newspapers and quack medicines. Here again it is the community that is to blame for paying a high price for rubbish. When all is said, it remains broadly true that wealth is got by making or dealing in something that other people want and is kept and husbanded by being placed at the service of industry instead of being spent in ostentation and self-indulgence. One of the difficulties with which industry has had to contend for the last twenty years has been the rising demand of capital, because there have not been enough people with sufficient self-restraint to make them save, and consequently capital has not been accumulated as fast as industry has wanted it, and there has been an almost uninterrupted rise in the rate of interest on first-class securities since 1896. This same difficulty

is also one that is now causing the Government a great deal of difficulty and expense. The Government has to borrow enormous amounts, and because people are not saving as fast as the Government wants to borrow, the rate that the Government has to pay is very much above the level that used to be regarded as normal. We want to encourage the man who saves, because only by saving can capital—which is essential both for industry and for war—be produced; but we are not likely to do so if by turning all the capital that has hitherto been saved we show what is in store in future for any capital that anyone may now be thinking of saving.

There is, of course, the one exception of urban land values, in the case of which the reward of saving has been made, by entirely fortuitous circumstances, out of all proportion to the service rendered. Just because a large number of people crowd in to live on a certain piece of ground, the owner of it becomes, instead of a hard-working market gardener, the landlord of a fashionable or business neighbourhood, and the community pays him thousands a year for the privilege of improving his property by building houses on it. This kind of capital investment is evidently fair game for the tax-gatherer and something is being done to bring it within his grip. In the meantime, shareholders in companies which have done well during the war, and consequently will have to pay Excess Profits tax, cannot see why landlords should be exempted who are putting up rents because people are crowding into certain towns to work on munition jobs.

With this exception—capital invested in land—it seems to be neither possible nor desirable to tax capital; nor indeed, is it necessary, since the taxation of income, assisted by periodical payment of death duties, secures the object desired much more easily and equitably. When a man is receiving money, then it is always possible and fair to take some from him for the benefit of the State, which provides him with police and security, and, in effect, allows him to enjoy his property in peace. Even here, if it were possible—since what we want to do is to stimulate production—it might be better and sounder to tax expenditure rather than income, and so encourage the saving which is essential to the life of any civilised society. But this idea would require so elaborate a machinery of excise, that it is far from being possible, though a beginning might be made with the taxation of expenditure on ser-

THE WAR.

For the moment all eyes are fixed upon the Balkans, and everyone is asking What will Greece and Roumania do? or will it be possible for Turkey, in spite of the siege of Constantinople, to lend Bulgaria material assistance? For the moment we have no means of answering those questions. We do not even know what forces our own and the French Government have despatched, or how many more they are in a position to send forward. Neither have we any definite information regarding the intentions of Italy. Lastly, we are not properly posted as to whether the several Russian armies have been so materially reinforced and rested that they are now in a position to take the offensive with success. Even we do not know whether they are properly supplied by our own country, Japan, and the United States with war munitions. We are kept so completely in the dark relating to all these points that it would be mere waste of time to attempt to answer any of the questions put forward. We must, therefore, wait upon events. Turning to other fields of operations, we can, however, say, that events are moving decidedly in our favour. The militarists and the pessimists will, of course, deny this, and allege that, upon the contrary, the enemy is showing even greater audacity and greater strength than his greatest admirers expected. It would be waste of brains to argue with those people, some of whom are maintaining their thesis, not because they believe in it, but because they wish to bring over the public to their own policies; and the others are governed by agitated nerves. We shall, therefore, address ourselves to readers who keep control of their nerves and are able to measure forces. In France, for example, the British and French have for some months now been successfully carrying on offensive operations. They have not effected anything very striking to the imagination; but they have shown that they are superior in artillery, in the spirit of the men, and in generalship. It is quite true that the Germans still occupy a very large part of France, and that, though we have driven them from some commanding positions and taken possession of their first lines of trenches in many quarters, yet we have not compelled them to retreat materially from the ground they occupied twelve months ago. So much has to be admitted. But the well-informed reader, whose reasoning powers are not disturbed by weak nerves, will see that an enemy inferior in numbers, in material resources, and in generalship is losing ground decisively when he not only is not advancing an inch, but is losing ground steadily, even if slowly. The whole plan of campaign of the Germans was based on the assumption that the British Army was negligible, and that Paris could be seized in three weeks. The British Army has proved itself to be the very reverse of negligible, and Paris has never been reached. So far as France is concerned, the aims of the Germans have been defeated, and the longer they remain in possession the more serious will be their ultimate disasters.

Turning next to the Eastern field of operations, the evidence is equally clear that all the calculations of the Germans have been based upon false assumptions, and that they are now in a position so dangerous that they are grasping at straws like drowning men. It is perfectly true that they have succeeded in compelling the Russians to retreat from Russian Poland. But they have not broken a single Russian army. They have not compelled a single Russian army to engage in a decisive battle. They have not won one single great victory. The Russians have fought rearguard actions innumerable to cover their retreat, but they have always retreated in good order, and at a certain point they have stopped the advance of the enemy. The War in Poland so far has been almost exactly the counterpart of the War in Manchuria. Everywhere the Russians have failed to win, but everywhere the enemy has also failed to attain any material victory. Poland has been cleared of the Russians. But Poland is as hostile to the Germans as before. The winter has set in. The country is being turned into a kind of swamp. And when next month the really cold weather begins the position of the Germans will be dangerous indeed. In Russia, then, just as in France, the Germans have based their plans upon false assumptions; and now, as if they were not far enough from their bases, they have bribed Bulgaria to join with them in the hope that they may be able to relieve Constantinople and thus open the road to the Persian Gulf. It is a grandiose conception, worthy of the madman who sits upon the German throne. But it is not strategy, and much less is it practical business. It is quite possible that Serbia may be over-run. We have no ambition to play the part of prophets. We leave to those who care for such a *rôle* to predict as they like. We base our statement upon the experience of all history, and upon the fact that Germany has not found one single great leader; that she and her allies together have much smaller populations than her enemies; and that her resources are rapidly being exhausted. Germany may fight for some months more. She may even win some victories. But winter has her in its grip in Russia, and she will, indeed, be fortunate if her armies in Russia ever

return. We do not for a moment doubt that the *Entente* Allies are in a difficulty because, partly, of the want of munitions on the part of Russia and, partly, because of the action of Bulgaria. But blundering does not always mean defeat. We committed plenty of blunders during the South African war, the Crimean war, and the great war against the greatest of modern generals, and we won in all three. We have blundered in the usual way in our present War, and yet we shall win, for we have absolute control of the sea, and we and our Allies combined can put two men in the field for every one the enemy can put. Those two circumstances are decisive.

THE BALKAN OUTLOOK.

WHAT seemed to all careful students of Balkan politics impossible has happened. Bulgaria, which was freed from Turkish tyranny by Russia in 1877, is now actually at war with her deliverer, not because Russia has done her wrong in any sense, or has ever ceased to watch mother-like over her interests; but because an ambitious and ignorant German princelet is upon the Bulgarian throne, and fancies he will forward his own fortunes better by turning upon the saviour and heretofore protectress of his kingdom, than by proving loyal to the protectress. Experience will tell whether his calculations are right or wrong. But it seems incredible that he can succeed. It is quite true, of course, that for the moment Serbia is hemmed in by enemies of overwhelming strength who are able to put in the field against her armies twice as numerous. She has, of course, the support of the Entente Powers. But can they come to her assistance in time? They can come to her assistance ultimately. That is beyond question. They can overwhelm the Bulgarian and Austro-German armies. That also is certain. But can they arrive strong enough and soon enough to save the gallant little kingdom from the brutality of a German conquest? Serbia has been the special quarry marked out by Austria-Hungary for many years, for the bulk of the Slav subjects of the Dual Monarchy who are most hostile to that monarchy are either Serbs or very nearly akin to the Serbs. If Serbia, therefore, were trampled underfoot it has long been the belief of Buda-Pesth and Vienna that the Hapsburg monarchy could thenceforward live in peace. Therefore, we may be very sure that if Serbia is overrun by her enemies her people will be treated at least as mercilessly as were those of Belgium. For the moment there is no question that the Serbians are outmatched. It is true that French and British troops have been landed at Salonika, and have been welcomed by the Greek population. But the two Allies cannot have been able to land very many troops yet, and whatever haste they may make, it is to be feared that Serbia cannot wait for their arrival. Russia is stirred to the very depths by the ingratitude of Bulgaria, and by her revolt from the Slav cause. Russia, therefore, we may be very sure, will hurry up troops as quickly as possible. But, unfortunately, as our readers know, Russia is very lacking in munitions; and therefore it may be doubted whether she can send a sufficient force to protect the Serbs, especially remembering how she has been compelled to withdraw from Poland and is now being fiercely attacked in the neighbourhood of Riga. It is probable, and very generally believed, that the Grand Duke Nicholas is exerting his utmost efforts to get together an army in the Caucasus sufficient to sweep aside the Turkish army in that province and to march upon Constantinople. But all that will take time, and meanwhile the Serbian Army of possibly 300,000 or 350,000 men will be opposed to German, Austrian, and Bulgarian forces of perhaps double that number. She will be able, as already said, to reckon upon the British and French. But we are completely in the dark as to what numbers of these have already arrived, and, still more, as to how many the two Governments are prepared to send to the Balkans. The fear, therefore, is very general that the Anglo-French assistance will come too late for saving the gallant little kingdom. That it will be able ultimately to sweep the enemy back across the Danube and the Save is not open to question. But, meantime, Serbia will be trampled underfoot.

If Greece and Roumania could be induced to act promptly the whole face of things would be changed, and in all reasonable probability not only would the Bulgarians be punished, as they deserve, but the Austro-German Armies would likewise be thrown back. The conduct of Greece is so inconsistent that it is extremely difficult to understand it. We all know that for the second time M. Venezelos has been forced out of office by the King, and his policy thrown to the winds. There is no question, of course, regarding M. Venezelos' judgment, statesmanship, or sympathies. But what is the policy of the King and the Ministers who are willing to serve him is puzzling all observers. Greece loudly declares that she is neutral, and means to remain so. But she has given permission to the British and French troops to land at Salonika for the acknowledged purpose of protecting Serbia against attack. Consequently she is doing what Germany, Austria-Hungary, Bulgaria, and Turkey may, according to all international principles, regard as an act of war. Therefore she is not winning the good will of the Entente Powers and she is risking the enmity of the other side. It is hardly credible that she can long continue such a course. It is possible that Germany and Austria-Hungary are willing to overlook Greek action in allowing the Franco-British Armies to land because they may reckon that after all Serbia will be crushed before French and British assistance can arrive, whereas by acting as she is doing at present Greece is keeping out of the fray and, therefore, leaving Serbia to her fate. But to outsiders, who cannot know all the tricks of the game, it seems to be an extremely dangerous policy Greece is following. For the moment the two Central European Empires may be silent, satisfied that the Greek Army is not opposing them. But can Greece count on the same favourable treatment if Serbia is crushed and the Austro-German Armies enter her territory? Clearly, if Greece permits French and British troops to enter her territory she cannot expect to remain at peace with the other side if she refuses them entry into her territory. Consequently she is running the risk at the least of seeing her territory being made the battle-ground between British and French on the one side and Germans, Austrians, and Bulgarians on the other, even if the Austro-Germans and Bulgarians do not treat her as an open enemy. There are rumours, stated to be on good authority, that the British Government has made very valuable offers to Greece to be executed without delay if the Greek Army immediately takes the field. It will be strange if those offers are refused. It will seem, in fact, that the Greek Government is struck with madness.

There is more excuse for Roumania remaining inactive than for Greece. In the first place, Greece is exposed to the British and French Navies, and even the most bloodthirsty German must admit that that is a very great extenuation of what appears to him an act of hostility towards Germany. Greece is so placed that she is immediately at the mercy of the Entente Powers, and, for the present, at all

events, is out of reach of the Central European Empires. Roumania, on the other hand, is out of reach of the British and French Navies; has no reason to fear that a great Anglo-French Army will be sent to coerce her; while she runs side by side with Hungary. Roumania, then, is as much at the mercy of the Central European Powers as Greece is at the mercy of the Entente Powers; while the want of munitions on the part of Russia, and the consequent losses the Russian armies have suffered, make it extremely unlikely that the Russian Army will soon be in a position to protect either Roumania or Serbia. And our Government and the French must make wonderful haste if they are able to protect not only Greece and Serbia, but Roumania as well. Of course, we are not leaving out of account the very excellent and efficient armies that both Greece and Roumania can bring into the field. On the contrary, the fact that they have such armies makes their conduct less intelligible than it otherwise would be. For they must know that if England and France send armies to fight in the Balkans they will not content themselves with sending small subsidiary contingents. They will take care that the assistance will be real. We have said nothing so far regarding Italy. The Italians are engaged in difficult work in the Alps when the climate there is becoming exceedingly trying. Yet it is clear that Italy, having entered into the War after full and careful consideration and long preparation, must know that if she fails she will suffer severely. Therefore, it is clearly as much to the interest of Italy as to that of any of the Entente Powers that the War should be brought to an end as speedily as possible, and that the two Central European Empires should be deprived of the ability to punish her as they unquestionably desire to do. There is a very general belief that Italy will assist Serbia. Indeed, it will be recollected that last week the French Prime Minister expressed the opinion that it was not at all unlikely that she would do so. If she does, it is to be recollected that Italy is near at hand; that she has a very powerful Navy; and, consequently, that she could transport a very respectable army to the assistance of Serbia without great loss of time. Furthermore, as our readers know, Russia is now being supplied on a very large scale with munitions not only from this country, but from Japan and the United States as well. Consequently, there is and there can be, no reasonable doubt that the attack upon the Balkans will fail. The real danger is not pre-eminent success for the two Central European Empires, but the practical destruction of the prosperity of Serbia by the cruel treatment she will be subjected to if her Army is decisively defeated. The real anxiety all her friends, then, is that not a moment's avoidable delay should be permitted; but that, as quickly as is possible, all her great Allies should hurry to her assistance. Of all her Allies the one best placed for protecting her is Russia. Russia, if the crisis had come earlier, would have been in a position to give the help; or if the crisis had been postponed for some further time, when Russia would be in possession of the full quantity of munitions desired, and would have reorganised her Army, then Russia alone would be quite capable of dealing with the emergency. But, as things stand, the immediate help will have to be given by Great Britain, France, and Italy, unless, indeed, Greece and Roumania can be induced to recognise their real interests and throw their swords into the scale on the right side.

"Elements of Foreign Exchanges." By Franklin Escher, published by the Bankers' Publishing Company of New York and Effingham Wilson, London, at 4s. net. The appearance of the fifth edition of this little volume is opportune in the circumstances of many people desiring a clear exposition of the subject covered by the title.

"Silver Bullets" will win the War.

Why send money to Foreign Countries, when you can get equally good value in your own Colonies?

Buy Rhodesian Tobacco and Cigarettes and circulate your money among your own kith and kin.

Financial Notes.

In his speech at the half-yearly meeting of the Anglo-South American Bank on Wednesday, the Chairman stated that the export of wheat from Argentina during the past year had been two and a half million tons, as compared with 900,000 tons in the previous year, and there is available for export five million tons of maize, of which only three million tons up till now have been shipped; whereas in the previous year the total shipments were only 1,800,000 tons. Naturally, the Republic has benefited, not only by the quantity, but also by the price, which was considerably higher. Wool has been shipped in about the equal quantity of last year, but here again the value has been favourably affected. The value of the exportation of meat shipped exceeds that of the previous year, although the quantity shipped is somewhat less.

"The prospects of the coming crops," the Chairman continued, "are probably not equal to what they were last year, as at the critical time of sowing, rains were badly wanted; and although this has been partly modified quite recently, the rainfall is still under the average. We have a telegram from our Buenos Ayres manager, received to-day, which states: 'Wheat in general excellent; oats very good owing to further rains; linseed average; maize too early to report but expect some damage from locusts; local financial position steadily improving.'" The wine production of Mendoza was not good for the two previous years. But this has to a certain extent improved, partly by certain effective local measures taken by the Government of the Province, and partly by the ability of the producers to raise the selling price of the wine to a point which shows a moderate profit.

We must bear in mind that the month of October in Argentina corresponds to the month of April here at home; that therefore we are still a long way from harvest time; and that much may happen in the interval. Most sincerely do we trust that nothing adverse will happen. But to illustrate the various dangers we may mention that one authority—and an exceedingly careful and well-informed authority, moreover—reports that there are fears that locusts may do damage. No doubt there are locusts on a small scale, always. It is to be hoped that they will be on a small scale this year if they appear at all. In any case, it is well to recollect that the season is too early to speak with any confidence.

It is with great pleasure we learn that the Indian monsoon has continued well into the present month, and now promises to be an exceedingly good one. There were serious fears entertained at one time respecting certain districts where the monsoon began late, or where it was suspended very early for a considerable time. But the late rains have proved to be very abundant, more particularly in districts which had been badly served earlier in the season. The belief now is that the monsoon will be one of the best,

and that it ensures another prosperous year. Most sincerely do we hope that the expectation will be realised.

India is almost exclusively an agricultural country. There are industries, of course, in a few districts—for example, cotton in Bombay, and jute in Bengal. In the whole of India there are only 30 towns with 100,000 inhabitants and over. Therefore the prosperity of the country depends entirely upon agriculture. And the heat is so great that unless copious rains fall in the summer time, vegetation is rendered impossible. The soil, in fact, is baked too hard for almost anything to grow. The importance to India, then, of an abundant monsoon can hardly be exaggerated. The Government has done much in the way of irrigation, and as soon as this dreadful war is over, we hope irrigation works on a still greater scale will be taken in hand. But for the present we have to depend mainly upon the monsoon, and the good monsoon this year means that there will be abundant crops next year. The prospects are excellent, and no doubt every peasant is actively at work preparing for the new season.

It is the duty of every Government to promote the interests of its subjects in every way possible. And Governments are judged not merely according to what they do, but by the efforts they make to inform themselves how they can best turn to good account what lies before them. In particular, India deserves from its Government the most assiduous and unremitting service. The new issue setting forth all the offers of services that have been made by the ruling Princes of India, by the great proprietors, and by local bodies shows the high spirit of patriotism that prevails, and the pride the Indian people take in their own participation in an Empire upon which the Sun never sets, and which is able to control the seas. It is a very great asset—the loyalty and public spirit of a great people. Most earnestly is it to be hoped that we shall show our recognition of the greatness of the asset not by mere empty talk, but by redoubled efforts to increase the welfare of the people and to open up to them new avenues to prosperity and wealth in every direction. The Governments everywhere can do much, but nowhere can a Government do more than in India.

Naturally, as the monsoon has continued late, and as prospects have brightened, trade is fairly active. It is not as active, of course, as in a time of profound peace. But there is a fair business doing, and even the India Council is selling its drafts fairly well. The Council sold on Wednesday 40 lacs at 1*s.* 4*d.* for bills and 1*s.* 4 1/32*d.* for transfers, and it is offering 40 lacs again next Wednesday. Trade would, perhaps, be even more active were it not for the War. Last year the pranks of the *Emden* caused a good deal of apprehension in India, and interfered with trade considerably. This year there is nothing to be apprehended from German commerce destroyers. But for all that, the world's trade has shrunk.

For one thing, the two great markets of Germany and Austria-Hungary are closed to the world. For another, we have raised such immense multitudes of men for the Army and Navy that our productive industry is thrown considerably out of gear. Therefore, we are not buying on as large a scale as usual. Naturally, the closing of two great markets, the occupation by hostile forces of so large a part of France, the immense expenditure for war purposes of England, the closing of the Dardanelles, and the intervention of Italy in the War, all tend to limit trade of every kind. Considering all the circumstances, then, we must admit that the situation in India is one to be thankful for.

RAILWAY WAGES.

After considerable discussion the question of railwaymen's wages, it is hoped, has been finally settled for the termination of the War, or, at any rate, for such period as the railways are operated under Government control. Prior to the War there was expectation that demands would be put forward towards the end of 1914 for increased rates of pay, but upon the outbreak of hostilities it was decided at a conference between the representatives of the railways and of the men that old agreements should remain in force until such time as either of the parties gave notice to determine otherwise. In view of the great rise in the cost of living, no long delay occurred before the men applied for a War bonus of 5*s.* a week. A compromise was, however, arrived at between the parties, and an agreement was drawn up in February whereby employees of 18 years of age and upwards whose standard weekly wage was under 30*s.* received a War bonus of 3*s.*, while those with a standard rate of wage of 30*s.* or more received a bonus of 2*s.* a week. This arrangement was to remain in force during the period the lines were operated under Government control, subject to review at the end of three months. At the expiration of this period the parties to the agreement again met, and, although application for a further bonus was made, it was ultimately agreed in June that, apart from granting a bonus of 1*s.* 6*d.* a week to employees under 18 years of age who had not previously participated, the February agreement should continue, and that no further application for an advance in wages would be made. Within a short time, however, another application was made for an all-round rise of 5*s.* a week in comparison with wages paid prior to the War. A compromise has again been made, and, although the full 5*s.* increase has been granted, it must be recognised that it is stated to be a bonus, and must not, therefore, be regarded as a permanent increment in wages. In the case of boys the War bonus has been raised to 2*s.* 6*d.* a week, and although the new agreement, as did the old, applies only to employees "engaged in the manipulation of traffic," the bonus will doubtless be extended to other grades.

Whereas the cost of the concession in wages granted early in the year was estimated at about £4,000,000, that now granted will call for about twice this amount. It will be remembered that the Government has been paying three-fourths and the companies one-fourth of the previous War bonus; but how the additional expenditure now to be incurred is to be defrayed has not yet been officially announced, and until particulars are forthcoming it is useless to consider the effect of the new bonus upon railway profits.

Woodend (Kelani Valley, Ceylon) Rubber and Tea Co.—Interim dividend at 5 . less tax.

Wilsons and Clyde Coal Co.—Dividend of 3*s.* 6*d.* per share on Ordinary, less tax.

Yorkshire Insurance Co.—Second half of the dividend declared in May, being at the rate of 2*s.* 6*d.* per share on the £5 shares (10*s.* paid) and 5*s.* on the fully paid £1 shares.

THE WORLD'S GREAT BANKS.

In the past generation the growth of banking has been one of the most remarkable of the many phenomena of the period; indeed, in a large measure the expansion of banking and the extension of the credit system have rendered possible the really wonderful development that has taken place. At the end of last year the deposits of many banks were swollen by war conditions; nevertheless, a comparison of the deposits of the world's great banks assists one to realise how it has been possible for the great nations to raise so much money for war purposes.

BRITISH BANKS WORKING ABROAD.

In the introduction to the Banking Section we have endeavoured to give a comprehensive view of the effect of the War on banking. To supplement the information there given we set out below various statements showing the effect of the War on banking in Canada and Australasia, and how it has affected British banks with branches in India, in the Far East, in South Africa, and in South America.

ANTOFAGASTA RAILWAY.

THE announcement is made of an interim dividend of 2½% in respect of the current year on the Deferred stock of the Antofagasta (Chili) and Bolivia Railway Company. This is the same as a year ago, despite a heavy falling-off in traffic receipts; and, judged by the improvement now being shown, the Company should have no difficulty in maintaining the final dividend at 5½%, making 8% for the year. The diminution in earnings for the six months was over £390,000. The decreases continued right up to the middle of August, when a recovery set in, and for the 42 weeks to October 17 the decline is £344,000. Since August 15 the gain has been nearly £75,000, and if this rate of improvement continues much of the loss shown to date will be made good. The demand for nitrate for explosive as well as for agricultural purposes is steadily improving; and, with the price exceptionally high, considerable profits are being made, which sooner or later must have a favourable influence on Chilean trade and prosperity. For the year 1914 the Company earned a profit of £550,000, or sufficient to pay the Preference dividends in full and leave a balance equal to 17½% on the Deferred. The price of the stock is 122½.

THE ATCHISON'S PROGRES

THE results of the Atchison Railway in the year to June last were exceptional from two points of view. Not only were the volume of traffic handled and the earnings greater than ever, but the improved earnings were secured in a period when the railway transportation industry in the United States was suffering from a setback in trade and when the gross receipts of the companies generally showed a large decline.

Practically the whole of last year's improvement in earnings arose from the enormous crops, more especially winter wheat, gathered in the territory served in 1914, which more than made good the shrinkage in earnings in 1913-14 that resulted from the poor crops of 1913. The wheat crop of Kansas doubled last year, having amounted to no fewer than 176,300,000 bushels, as against 86,515,000 bushels in 1913; while the maize crop of the State was more than quadrupled, the crop in 1914 having exceeded 108,000,000 bushels, compared with only 23,500,000 bushels in the previous year. The larger traffic thus accruing to the Atchison was mainly exported via Galveston, thereby affording to the road a very long haul and great earnings. Hence the gross eearnings were increased $6,650,000 to $117,666,000, which compares with the previous highest total of $116,896,000 earned two years before. Operating expenses increased $2,622,000 to $76,092,000, so that there was the substantial gain of $3,934,000, or over 10% in net earnings, raising them to the unprecedented figure of $41,574,000. Miscellaneous income increased almost $800,000, and was larger than ever before. On the other hand, interest and other charges increased about $800,000 on account of heavier payments for hire of equipment. Hence the net profit last year increased nearly $4,000,000 to $18,422,000, a sum equal to 9.34% upon the stock, as against 7.43% in 1913-14. The surplus last year in excess of the dividend amounted to $6,581,000.

The distribution of profits by the Atchison has always been on a conservative basis, and this policy is largely responsible for the great strength of the undertaking. Since 1896 nearly $350,000,000 of capital and profits have been expended upon road and equipment, only about two-thirds of which has been provided by new capital, the balance having come from surplus profits. The wisdom of this policy of putting large amounts of profits back into the road is fully borne out by the events in recent years, for although from the point of view of traffic and of earnings the Atchison has had nothing to complain of,

from the standpoint of operating expenses and taxes the position has been far from pleasant. The net result of these additions to the cost of operation has been to reduce the return on the money expended upon the property, and were it not for the fact that the capital account has been kept down by the application of a great aggregate of surplus profits to capital purposes, and that the officers of the road have put forth every effort to operate the traffic with the utmost economy, and thus to combat the rising expenditures, the rate of dividend earned on the Common stock would be much less favourable than is now the case. To show the growth of earnings and of income we present the Income Statement herewith. From this it will be evident that the undertaking is in a very sound condition, and that, come what may, its interest charges will be amply cared for. On the basis of last year's results interest charges represent less than 13% of the gross earnings and no more than 38% of the net income.

Both in prosperous times and in periods of depression the property is kept at a high standard by liberal maintenance outlays, and in a year when gross earnings have expanded 5½% it has not been essential to add appreciably to the expenditures upon the upkeep of the road and equipment. In the past twelve months 30.84% of the gross revenue was devoted to maintenance of way and equipment, and over the past decade the outlays for these purposes have averaged 31.59%. It will thus be evident that the officers are by no means niggardly in respect of maintenance expenses, and that the growth of net income has resulted from sheer hard work in preventing an undue rise in the cost of conducting transportation. Despite the increase in train staffs, the higher rates of pay and the mass of other additions to the cost of handling the traffic, the officers have succeeded in keeping conducting transportation expenses well in hand, with the result that last year the ratio to gross earnings declined to 31.73%, which is the lowest point touched since 1909, although no compensatory benefit in the form of increased rates and fares has accompanied the new burdens of expenditure. The course of expenditures in recent years is shown below:—

Operating Expenses of the Atchison Railway.

Yr. to June 30	Gross Earnings.	Maintenance of Way.	Maintenance of Equipment.	Cond. Transportation.	General Expenses.	Operating Expenses
	$	$	$	$	$	$

That the cost of conducting transportation has been kept down in this manner would of course not have been possible but for the great improvements to road and rolling-stock. Six years ago there was no 90-101-lb. rails on the track, but in June 1914 no less than 2,400 miles had been laid with them and further quantities have been laid in the past year. Hence it has been possible not merely to load the freight cars more fully, but to add to the number of cars per train, and thereby increase the average train load. In the past year the average load has been raised from 344¾ tons to 364½ tons. The really great progress now made in dealing with the traffic economically, notwithstanding all the difficulties that have had to be contended with, will be evident from the following statement:—

Condition of Atchison Railway, 1914-15 *and* 1896-97.

	1914–15.	1896–97.	Inc. or Dec. 18 Years.	%

The opening of the Panama Canal has been felt by the Atchison in the past year, and a certain amount of traffic has been diverted to the water-route that was formerly conveyed by railroad. So far as can be ascertained the loss of the Atchison's traffic in the past year arising from the opening of the Canal has been upwards of $1,000,000, but naturally it is as yet too early to measure accurately the effect of the Panama Canal upon the traffic of Transcontinental railroad systems. Certainly, in the current year, with the passage of shipping through the canal so seriously blocked by slides, not much effect will be experienced, but this, of course, is merely a temporary difficulty for the Canal, and one that may eventually be expected to be overcome. It has, however, to be borne in mind that past experience indicates that improved methods of communication invariably tend to expand rather than to diminish business as soon as the disturbing effects of a new route have been surmounted, and, as far as one can foresee, the quantity of existing traffic that will be diverted through the Canal will be small in comparison with the great advantages anticipated to accrue to the Atchison from the more rapid development of the Pacific States.

Appreciable as was the expansion in traffic earnings and profits in the past year, the expectation is for still better results in the current year. Prices of agricultural produce of all kinds, though not as high as in the past year, are still greatly in excess of normal, and by reason of the prosperity they are

now enjoying farmers may largely augment their purchases of all kinds. Further, the effect of the present boom in industrial activity in the United States is anticipated to have an important bearing upon the traffic of the great railroad systems. Last year's crops were exceedingly abundant and brought great traffic to the Atchison, but this year's traffic may be still greater, in consequence of the abundance of the maize crop. Although this year's yield of wheat in the States served by the line is below that of 1914, it is still considerably above that of 1913, while the maize crop is much greater than in either of the two years. The abundance of this year's crops will be evident from the following:—

Maize and Wheat Crops in States served by Atchison Railway, last Three Years.

For the two months to August an expansion of $1,551,000 in gross earnings was accompanied by an increase of $867,000 in expenses and taxes, and there was a gain of $684,000 in net earnings.

The amounts and prices of the Company's securities and yields afforded are shown below:—

ARGENTINE RAILWAY RESULTS.

BUENOS AYRES WESTERN.

FULL justification for the transfer by the Buenos Ayres Western Railway Company of £160,000 from reserve in order to maintain the dividend at 5% is to be found in the report issued this week. The gross earnings for the year show a decrease of £6,496, or 0.2%, but despite every effort to economise the working expenses have increased £17,532, or 1.2%, and the ratio of expenses to receipts has been raised from 58.82% to 59.67%. As a matter of fact, the stringent measures adopted to ensure economy have been entirely successful, but unfortunately the damage caused by floods involved an expenditure of £122,825, so that but for this unexpected outlay the total cost of working would have been reduced by about £105,000, and the ratio to gross receipts lowered to 54%. The transfer of £160,000 from reserve, therefore, merely means that the exceptional cost of flood repairs has been met out of accumulated profits—really the object of building up a reserve fund at all. In other respects the Company has been fortunate, having regard to the unfavourable international situation, the continued financial and commercial depression throughout Argentina, and the short crops as a result of the bad weather. Practically the only crop to show improvement is wheat, which, although considerably smaller than it should have been, was fortunately late in maturing and so escaped damage from frosts early in November. On the other hand, maize tonnage was reduced by 16.26%, oats by 25.11%, and linseed by 29.35%. General goods traffic, which reflects the pecuniary standing of the camp people, was naturally affected by the economic situation, and shows a decrease in tonnage of over 12% and in revenue of 7.3%. The live stock business was particularly brisk in view of the large demand and favourable prices. There was a decrease in sheep owing to a smaller number received from other railways, principally on account of the floods, but otherwise substantial increases are shown under all heads.

The most noteworthy reductions in working expenses were in maintenance of way, which cost £50,000 less, and in locomotive running and traffic expenses, which together absorbed nearly £47,000, or 5.7% less than in 1913-14. The saving in train mileage was equal to 4.6%, and to this the lower cost of conducting transportation is mainly attributable. The net result of the year's operations is a falling off in profit of £104,000, but if we eliminate the special cost of flood repairs charged to expenses there is a profit gain for the year of over £18,000, which means that the dividend of 5% is within £30,000 of being earned. The income statement of the Company for the last four years is appended:—

The future of the Company is undoubtedly full of possibilities. The setback of the past two years, unfortunate though it is, must be regarded as purely temporary. Argentina is a young country, and having regard to the fact that its products embrace all the requisites of human subsistence, which at the present time are in great demand at high prices, the wealth and prosperity of the nation are growing at a rate never hitherto experienced, and the economic position of the country is rapidly improving. This will be further enhanced by the bumper crops which are likely to be gathered in the coming season. At one time moisture was badly needed, but latest advices report that favourable rains have fallen in all divisions and that the crop prospects are excellent. The maize harvest now being moved is reckoned to be a medium crop, and whilst this is helping the railway companies and swelling their traffic receipts, as compared with a year ago, the improvement in earnings later on should be much more pronounced if nothing untoward happens to upset present crop calculations. Since the beginning of July the earnings of the Buenos Ayres Western Railway have increased £111,000, which rather more than makes good the losses sustained by the Company in the corresponding period a year ago. The price of the Ordinary stock is 83, and on a 5% dividend basis the yield afforded is £6 per cent.

The capital of the undertaking is as follows:—

Name	Amount	Dividend	Price	Yield
	£	%	£	£ s. d.
Western Ry. of Buenos Ayres 5% Mort. bonds, redeemable 1925	1,000,000	5	101	5 1 4½
4% Debenture stock	7,872,203	4	79	5 2 11
5% Terminable Debs. [illegible] ...	[illegible]	5	100½	5 1 3
5% Preference (£10)	500,000	5	[illegible]	5 1 8
4½% Preference (£10)	2,552,340	4½	[illegible]	5 13 11
4% Extension shares, 1915 (£10)(a)	3,600,000	4	£5 5s. 0d.	(a)
Ordinary stock	13,747,660	5	85	6 5 0
	30,072,203			

(a) These shares are entitled to dividends of 4% until June 30, 1915, after which they will rank for dividend and in every way *pari passu* with the Ordinary stock.

(b) Allowing for redemption at par in 1925.

CENTRAL ARGENTINE RAILWAY.

Of the three latest railway companies whose reports have so far been issued the Central Argentine is certainly the most satisfactory. Thanks to the good maize crop and the consequent recovery in earnings in the latter months of the year, the total gross receipts for the twelve months were reduced by only £303,000, or 5%. The decreases occurred almost entirely in passenger traffic and general merchandise. Passenger receipts were down £252,000, and general goods declined £163,000, or 17.1%. These two items reflect the trend towards economy which the untoward events of the past year have rendered imperative among the Argentine people. The crops generally were good and in great demand, with the result that wheat and maize carryings represent additional receipts of about a quarter of a million sterling, whilst the sugar harvest—which was most successful—appreciably exceeded that of the preceding year.

Perhaps the most satisfactory feature of the report is the large saving in expenses. The decrease shown is £183,700, or 5.2%, the rate of working being 58.43%, against 58.54%. But it must be borne in mind that included in the expenses of the year is a sum of no less than £440,000 by way of contributions to reserve funds, which is some £70,600 larger than in 1913-14. Eliminating these contributions the decrease in working expenses is as much as £254,000, and the ratio to gross receipts is only 50.79%, as compared with 52.45%. This is undoubtedly a satisfactory achievement taking all the circumstances into account, and reflects great credit on the management, whose efforts to economise have met with such marked success. The net revenue balance, including miscellaneous receipts, shows a decline of £112,000 only, but as interest charges are £95,000 heavier, the profit for dividend is reduced by £207,000 to £1,456,000. However, this is more than sufficient to pay the dividend of 5% on both the Consolidated Ordinary and Deferred stocks, and after allocating £100,000 to the contingencies fund, which has been overspent owing to the abnormal floods, the balance carried forward is only £94,000 down at £346,000. The excellence of the year's results will be seen from the statement appended:—

Until, of course, the War is ended, and the general world situation is restored to equilibrium, a return to pre-War conditions in Argentina cannot be expected. At the same time the present condition of affairs is helping matters materially, in that it has created a big demand for Argentine products of all descriptions, which, at the greatly enhanced prices now being obtained, is bound to have a marked effect on the general well-being of the Republic. At the moment the railway companies have to depend more or less entirely on the size of the crops, and in this respect the immediate future is exceedingly promising, so that the improvement in earnings now being shown should continue throughout the year if nothing happens in the next two months to injure the crops. The price of the stock is 83, and the yield from the dividend of 5% is slightly over £6¼ per cent. The Deferred stock is quoted at 71, and as this includes a full year's dividend, the yield afforded is as much as £7 11*s.* 6*d.* per cent.

CORDOBA CENTRAL.

The past year has been a particularly disastrous one for the Cordoba Central Railway. The gross earnings at £1,691,000 show a decrease of £277,000, or 14.1%. Strenuous efforts have been made to effect economies, with the result that the working expenses have been curtailed by £145,000, or nearly 11%, and although the ratio is higher at 71.08%, the difficulties encountered must not be overlooked. With a decline of £132,000 in net earnings, the total income for the year amounts to only £491,600, which is about £60,000 short of the sum needed to provide interest charges in full. Considering that last year the Company was able to pay 5% dividends on both the First and Second Preference stocks with a small credit balance, the set-back which has occurred is certainly severe. With regard to prospects, the General Manager in his report refrains from any prediction, the factors governing the financial and commercial situation, he states, being too uncertain. Everything at one time pointed to another bumper sugar crop this year; but unfortunately the cane suffered severely from exceptionally hard frosts followed by hot weather, and there is now no doubt that the yield of sugar will be less than last year. "Everything possible," he affirms, "is being done to stimulate traffic and to still further reduce working expenditure, and although the situation is not momentarily bright, there is no reason for pessimism as to the future.

The latest cable advices received from the Argentine are to the effect that there are still considerable quantities of grain and sugar awaiting transport over the Company's lines, and that in the greater part of the cereal districts the coming harvests promise good yields. To meet the new conditions that have arisen it is announced that the greater part of the Company's rates have been raised by 10% as from October 1. This will have an important effect on the Company's earnings and profits in the current year, and although more will be heard of the altered conditions which are responsible for the higher charges, and protests are already being made against them by traders, there appears to be justification for the advance, having regard to the drop in earnings and the new levies which are constantly being imposed on the companies in every direction.

SAN PAULO RAILWAY.

THE outstanding feature in the report of the San Paulo Railway for the six months to June last is the satisfactory reduction shown in working expenses. In some measure, of course, this is due to the lower exchange, but an analysis of the accounts clearly indicates that a marked degree of economy has been exercised in all the spending departments, without ex-

ception, which, coming as it does on top of considerable retrenchments in the corresponding half of last year, reflects great credit upon the management, who, at a time of stress like the present, must be congratulated on being able to show such excellent net results. The falling off in gross earnings amounted to Rs. 1,53,740, or 12.7%, but as this was accompanied by a reduction of Rs. 14,23,769, or 14.3%, in working expenses the net earnings show an improvement of Rs. 12,70,028, or 59.4%. The proportionate cost of working has thus been lowered from 82.30% to 71.41%. The half-year's results in currency are set out beneath:—

Half-Year to June 30.

	1915 Rs.	1914 Rs.	Inc. or Dec. Rs.	Inc. or Dec. %
Gross earnings ...	1,19,21,493	1,20,75,234	− 1,53,741	−12·7
Expenses... ...	85,14,296	99,38,065	− 14,23,769	−14·3
Ratio	(71·41)	(82·30)	− (10·89)	—
Net earnings ...	34,07,197	21,37,169	+12,70,028	+59·4

The loss of revenue was general in all departments. The number of passengers carried declined 270,150, and coaching receipts, including parcels, &c., were reduced by Rs. 5,84,634, or nearly 20%. The quantity of goods handled shows a diminuton of 179,582 tons, and the revenue therefrom declined Rs. 4,87,070, or 5.5%. Livestock traffic was also smaller, and miscellaneous receipts are down about 16% compared with a year ago. The principal economies in working expenses were Rs. 9,44,000, or 42.7%, in maintenance of way; Rs. 15,000, or .5%, in tractive power; Rs. 1,71,000, or 14.2%, in carriage and waggon repairs, and Rs. 1,46,000, or 6%, in traffic expenses. General charges in currency were slightly higher, but miscellaneous outlays, including taxes, were reduced by nearly 40%.

Owing to a drop of nearly 20% in the value of the milreis (the average rate of exchange being only 12.83*d.*, as against 15.99*d.*), the net results in sterling are less satisfactory. Nevertheless, the net revenue balance at £188,291 shows an increase of £30,759, or 19.5%, which gives a profit for the Ordinary of £116,416, as against £85,657. Such a profit is short by £33,584 of the sum needed to pay the 10% dividend; but, thanks to the relatively large balance of £281,763 brought forward from 1914, the Company is able to maintain this rate of distribution, and at the same time to write down its investments by £76,903 and leave a balance of £171,276 to be carried forward to the current half-year. Twelve months ago the Company set aside £60,000 to income-tax account, in addition to paying the 10% dividend, and the balance carried forward was £210,758. In the table appended we set out the main results of working for the half-year in sterling in contrast with those for the corresponding half of 1914: —

San Paulo Railway. Half-Year to June 30.

Carried forward	171,276	210,758	− 39,482	—

Since the close of June the Company has done much better, and although comparison is being made with the exceptionally poor takings of a year ago, when the effects of the War were keenly felt in Brazil, signs are not wanting of a general recovery of prosperity having set in throughout the country. The coffee crop this year is estimated at 12,000,000 bags, or 720,000 tons, as against 8,000,000 bags, or 540,000 tons, a year ago. The price, too, is steadily rising, and although low as compared with what it was prior to the outbreak of war, the trend is in the right direction, and if it can be maintained a recovery in the financial situation and in the exchange value of the milreis is likely to be brought about. Until, however, the War is over and normal conditions again prevail any pronounced revival of prosperity is not to be looked for. At the same time, it is pretty certain that the San Paulo Railway Company will experience no difficulty in maintaining 10% distributions on its stock. Apart from any increase in profits in the current half-year, the balance at the disposal of the board six months hence will be more than sufficient to pay the 10% dividend. For the whole of 1914, it will be recollected, the Company earned a profit of £357,000, and if to this we add the increase of nearly £31,000 secured in the first half of the current year, the available balance for 1915 would be £389,000, a sum equal to nearly 13% on the Ordinary capital. With an increase in traffic receipts of over £160,000 since the end of June some gain in profit for the half-year should be secured, and the margin behind the 10% dividend six months hence may be further augmented. To show the position of the Company at the present time, ignoring the problematical outcome of the current six months, we give herewith the annual income statement of the Company for several years:

* Based on the results secured for the first six months only.

The price of the Ordinary stock has recovered to 171, and, as the dividend is paid free of tax, the yield is now about £6½%. The 5% Non-Cumulative Preference stock at 87½, giving a yield of £5 17*s.* 8*d.* per cent., is an attractive purchase, the margin behind the dividend at the present time being as much as £390,000, or sufficient to cover the charge nearly eight times over. For the investor desiring quite safe securities, giving a good return, the Debenture stocks of the Company may be commended. At current prices they afford yields of from £5⅛ to about £5⅜%. The total Debenture interest represents less than 18% of the net income available, so that under almost any conceivable circumstances the Company's interest charges are likely to be met.

The capital of the Company is as follows:

Security	Amount	Int.	Price	Yield £ *s.* *d.*
	£	%		
4% Debenture stock	1,000,000	4	79¾	5 2 3
5% Debenture stock	250,000	5	96	5 13 [illegible]
Perm. 5⅛% Debenture stock ...	750,000	5⅛	100¼	5 1[illegible] 4

Insurance Notes.

COMMERCIAL UNION ASSURANCE CO., LTD.

In the commercial sections of insurance business this Company in the aggregate is the largest operator in the United Kingdom, and it is one of the most successful in each sphere of its activities. Its fire premium income is exceeded by that of only one British company, in marine insurance it holds a prominent place, and since its absorption of the Ocean Accident and Guarantee Corporation it has held a commanding lead in the accident and miscellaneous insurance fields. Its life assurance department is also of great and increasing importance.

The Company was itself established in 1861, but through its absorptions of the Hand-in-Hand Fire and Life Insurance Society in 1905 and the Union Assurance Society in 1907 it can claim a much more ancient history for some portions of its business. Indeed, the Hand-in-Hand, founded in 1696, was the oldest insurance company in the country, and the Union was its junior by only 18 years.

The Company's premium income showed considerable expansion in 1914, as indicated in the following comparative statement:—

	Premium Income 1914	Premium Income 1913
Fire	£3,537,279	£3,360,335
Marine	474,007	341,576
Ordinary Accident	443,755	445,123
Employers' Liability (within the United Kingdom)	718,651	711,931
General	1,764,580	1,719,994
Leasehold	34,188	31,990
Life (including acquired business)	1,098,042	1,059,953
Annuity	107,557	86,540
Total	£8,178,059	£7,757,442

In the fire department the trading profit in 1914 seems to have amounted to £171,790, this sum representing the excess of premiums over claims, expenses, and increased reserves in respect of unexpired risks. It is only about two-fifths of the trading profit shown in the 1913 account, but in 1914 fire insurance experience, especially in the foreign fields, was not generally favourable. Out of this profit £160,000 is transferred to profit and loss account, whereafter the fire insurance fund at the close of the year amounted to £3,578,275, or to about 101% of the premium income.

The Company's marine insurance business has always produced a high ratio of profit. Its marine premium income last year showed an increase of £132,431. What the actual trading profits were cannot be ascertained in the approximate method employed for the fire section, for reserves for unexpired risks in marine business are not computed in accordance with a fixed percentage of the premiums. But they may reasonably be assumed to have exceeded the amount of £65,000 which was transferred to profit and loss account, since the marine insurance fund was increased by £117,297 to £1,001,094. This fund represents about 211% of the premiums, which shows an exceedingly strong departmental position.

The premium income in the three sections of the accident department amounted to £2,926,986. The amount transferred to profit and loss account is £190,000, and it would seem as if the actual profits on the working had been considerably more, because the accident funds, after deduction of outstanding liabilities, show higher proportionate reserves than in 1913. They amounted on December 31, 1914, to £1,650,522, representing about 56% of the premium income, the corresponding proportion at the close of 1913 having been 49%.

The profits actually taken into account in 1914, apart from those employed in increasing departmental reserves, were as follows:—

Transferred from departmental funds		
Fire department		£160,000
Marine department		65,000
Accident department		190,000
Proportion of life profits applicable to the year		54,454
Interest earnings and fees not departmentally credited	£311,956	
Less income tax on profits	46,800	
		265,156
		£734,610
Less		
Alterations, repairs, &c. at Head offices and branches	£15,971	
Cost of businesses acquired	21,676	
Amount written off freehold and leasehold premises	20,000	
		£57,647
		£676,963

The Company's subscribed capital amounts to £2,950,000, or which £295,000 is paid up in shares of £10 with £1 paid on each. There were also Terminable Debenture issues at 4% interest, amounting on December 31, 1913, to £1,942,598, and on December 31, 1914, to £1,929,379.

The sum of £676,963 above mentioned has been apportioned as follows:—

(1) In provision for a dividend of 20*s.* per share (less income tax) as in the former year	£272,260
(2) In interest on Debenture stocks	71,328
(3) In transfer to investment reserve and contingency fund	316,185
(4) In transfer to guarantee and pension fund	10,000
(5) In increasing balance to credit of profit and loss account (after provision for full year's dividend, that balance amounting to £160,115 by	7,190
	£676,963

Thus little more than half of the profits brought into account have been applied to payment of dividends and to interest on Debentures.

The Company's new life business in 1914 amounted to £2,601,141, of which £167,193 was

reassured, the net retention at its own risk being £2,433,948. This exceeds the Company's record of 1913 by £84,560, which is rather remarkable, when the adverse influence of the War during the last five months of 1914 is taken into consideration, especially as business obtained within the United Kingdom represented about 97% of the total reported for last year. In the life account relating to Commercial Union policies (as distinguished from those of acquired companies) the premium income, amounting to £657,887, shows the large increase of £46,695. After making a suitable allowance for the cost of the annuity business, the expense ratio in this section was less than 12%, an under-average proportion. Death claims amounted to £329,546, and although this was more than twice what was paid in this way in 1913, it is stated to have been within the amount expected. Policies for £52,582 matured by survivance. Through the operations of the year the Commercial Union life assurance fund was increased by £453,685 to £6,048,630, and the net interest yield, after deduction of income tax, was about £4 6*s*. 3*d*. per cent., as compared with the rate of 3% assumed at the quinquennial valuation on December 31, 1912. The Company's bonuses have hitherto been declared at a high standard. In reversionary form they ranged at the last distribution from 29*s*. per £100 assured per annum to much higher amounts, being increased in other cases according to age at entry and duration of policies. The premium income and life funds in the acquired business were as follows in 1914:—

Office	Premium Income £	Life Funds at close of 1914
West of England	13,350	£508,908
Hand in Hand	178,965	3,563,011
Union	229,657	3,941,964
Liverpool Victoria	21,183	127,981

The leasehold redemption account for 1914 shows premiums of £34,188, and a relative fund at the close of the year amounting to £302,873.

The total assets in the Company's balance sheet on December 31, 1914, amount to £26,774,505. It is stated in a note thereto to the auditors, that the book values of the securities comprised in the various life accounts will be reviewed at the next quinquennial valuation in accordance with the usual practice. The remaining assets are included at book values, and a comparison of such values of the Stock Exchange securities with the market values on December 31, 1913 (investments made since that date being inserted at or below cost price), shows the assets on that basis to be in the aggregate fully of the value stated, less the Investment Reserve and Contingency Fund, which amounted to £550,000.

THE CUBA COMPANY.

TWELVE months ago we drew the attention of our readers to the favourable outlook for this Company and the probability of an increased dividend. The Company owns the whole of the Common stock of the Cuba Railroad Company, and consequently it is directly interested in that concern. In addition, the Cuba Company owns about 300,000 acres of land in Cuba, various town sites, including the terminal city of Antilla, and sugar mills and plantations in the Province of Camaguey and Oriente. It has an authorised capital of $16,000,000, in moieties of 7% Cumulative Preferred stock and Common stock. Of these there has been issued $2,500,000 of the Preferred stock and the whole of the Common stock.

Thus the income of the Cuba Company is derived from various sources. There is first of all the net earnings of the mills and plantations; secondly, the income from land operations; and, thirdly, that derivable from the holding of the Common stock of the Cuba Railroad Company.

The surplus income of the Cuba Railroad Company for the year to June 30, 1915, was $1,273,684, an amount equal to 12.73% on its Common stock, as compared with 10½% twelve months ago. The actual distribution, however, was restricted to 6%. This brought into the Cuba Company a sum of $600,060. The profits for the year from the Jatibonico sugar mill and plantations were $1,445,030, as compared with $580,460; from the Jobabo mill and plantations a profit of $1,550,773 was secured, as compared with $578,621. From the Land Department—chiefly from town sites— a sum of $57,188 was secured, as against $35,026. Thus in practically every direction the past year was more profitable than the previous twelve months. The total income from operations amounts to $3,120,032, as compared with $1,194,108. Adding the dividend from the Railroad Company, there is a total income of $3,720,092. Deducting general expenses, interest, and Preference dividends, there is a balance of $3,214,622, as compared with $1,299,178. The dividend on the Ordinary stock has been increased from 7% to 10%, which has called for a sum of $800,000. There is consequently a surplus on the year's results of $2,414,622, which is added to the general undivided surplus, bringing it up to $5,865,427.

This may be seen from the following:—

Statement of Income and Profit and Loss, June 30, 1915.

			$
Net earnings sugar estates			3,062,844
Land Department:			
Earnings:	$	$	
From sale of town lots	70,047		
From sale of timber	3,074		
Interest	5,076		
Rents	9,822		
Miscellaneous	664		
		88,680	
Expenses		31,492	
			57,188
Income from operations			3,120,032
General Account:			
Dividends on Cuba Railroad:			
Company Stock			600,060
Total Income			3,720,092
Less:			
Interest on Debenture bonds and notes		240,000	
General interest		13,139	
General expenses		77,331	
			330,470
Net Income			3,389,622
Preferred Stock dividend			175,000
			3,214,622
Ordinary Stock dividend			800,000
Net surplus			2,414,622
Brought forward			3,450,805
Surplus			5,865,427

The very considerable improvement that has occurred is thus evident, and naturally the better prices which have prevailed for the past year have been mostly responsible for the increased profits. On the other hand, the production of sugar was nearly 12% less than the year before, owing to frequent interruptions by unseasonable rains and to a serious weakening of juices from the same cause. It is announced that practically all of the sugar and molasses remaining on hand at June 30 have now been sold for the full value shown in the balance sheet of $2,772,427. Herewith we summarise the liabilities and assets as at June 30 last:—

Balance Sheet as at June 30, 1915.

LIABILITIES.	$	ASSETS.	$
Capital stock Ord.	8,000,000	Investments	15,800,802
,, ,, Preferred	2,500,000	Land, materials, &c.	1,048,238
Deb. bonds	4,000,000	Current assets	4,724,632
Current liabilities	345,183	Advance payments	113,438
Divs. on stock	887,500		
Reserves	80,000		
Profit and loss	5,874,427		
	21,687,110		21,687,110

The Company thus occupies a strong position, and there is every reason to believe that it will continue to do well. A very wise policy is being followed in restricting dividends to a much lower figure than the profits for the year would warrant, and keeping in

hand substantial sums to meet a time when exceptionally favourable conditions will not be so much in evidence and poorer results will be shown. The total surplus accumulated is almost equal to the combined Debenture Bond and Preferred stock in issue.

LAMBERT BROTHERS, LIMITED.

As an example of the manner in which some companies have greatly benefited by war conditions that of Lambert Brothers, Limited, may be taken. This Company was formed in 1902 and conducts the business of coal exporters, merchants, shipowners, and ship and insurance brokers. The Company has an authorised capital of £550,000, the whole of which has been issued. It consists of 50,000 5½% Cumulative Preference shares of £5 each, and 300,000 Ordinary shares of £1 each. The reserve fund amounts to £160,000, while there is also shown a surplus resulting from sale of steamers and shares in steamship companies of £38,350. The total assets are valued at £1,031,304, of which property stands at £386,238. There are shown investments on account of reserve after deducting provision for depreciation of £79,745, while there are also British Treasury bills, foreign and Colonial Treasury bills, &c., totalling £148,500. Herewith we summarise the liabilities and assets as at June 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued capital	550,000	Land, buildings	386,238
Sundry creditors, &c. ...	234,496	Sundry debtors, &c. ..	91,775
Reserve	160,000	Stocks of coal	50,939
Profit and loss	86,808	Investments	228,245
		Cash.	274,107
	1,031,304		1,031,304

During recent years profits have been secured on a steadily ascending scale. For 1910 they were £39,000, for the following year they rose to £40,811, for the twelve months to June 1912 they were £60,245, which was succeeded twelve months later by an amount of £106,476. For the twelve months to June 1914 they receded to £84,557, while for the twelve months to June 30, 1915, the profit rose to the record figure of £142,548. After providing for the Preference dividend there was a balance of £121,048, which was sufficient to provide for a distribution of 40% on the Ordinary share capital. The actual dividend was fixed at 20%, however, calling for a sum of £60,000, and a similar sum was added to the reserve fund, while the carry-forward was increased to £20,648. Herewith we set out the manner of distributing the profits for each of the past six years:—

Year ended June 30	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£
Profit	142,548	84,557	106,476	60,245	40,811	39,000
Directors' fees	7,750	7,750	7,750	4,600	4,600	4,600
Preference dividend ...	13,750	13,750	13,750	13,750	13,750	13,750
	121,048	63,057	84,976	41,895	22,461	20,650
Ordinary dividend .	60,000 (20%)	30,000 (10%)	45,000 (15%)	30,000 (10%)	18,000 (6%)	18,000 (6%)
	61,048	33,057	39,976	11,895	4,461	2,650
Reserve	60,000	20,000	40,000	10,000	5,000	5,000
	1,048	13,057	24	1,895	−539	−2,350
Brought forward	19,600	6,543	6,567	4,672	5,211	7,561
Carried forward ...	20,648	19,600	6,543	6,567	4,672	5,211

At the meeting of the Company the Chairman pointed out that a considerable amount would have to be found from somewhere for what was known as the war-tax, but that he was sure that all would have but one feeling with regard to that—that was, they were only too glad to be able to put it up. Evidently the Company will be able to meet any demand on this account from its reserve fund. The present price of the £5 Preference share is 96*s.* 3*d.*, at which figure the yield afforded is over 5⅞%. The amount required for the Preference dividend is only £13,750, and it may therefore be regarded as well secured. The £1 Ordinary share is quoted at 30*s.*, and if the Company is able to maintain the 20% dividend of last year a purchase at this price would give a yield of about 15⅔%. This may be seen from the following statement of the capital, prices, dividends, and yields afforded:—

Amount	Description	Par	Price	Div.	Yield
£		£	*s. d.*	%	£ *s. d.*
350,000	5½% Cum. Preference ...	5	96 3	5½	5 17 11
200,000	Ordinary	1	30/0	20	1 6 7 19

COLTNESS IRON COMPANY.

With but two exceptions the twelve months to July 31, 1915, have proved the most prosperous in the whole of the history of this well-known iron Company. The profits secured have amounted to £160,341, as compared with £95,117 for the previous year. The two occasions when the Company was able to report larger profits were for the year ended July 31, 1906, and the following year, when the amounts were £180,322 and £239,318 respectively.

The Company dates back, in its present form, to 1899, when it acquired a business previously carried on by a private company of the same name. It took over *inter alia* nine blast furnaces and steel, iron and ingot-mould foundries in Lanarkshire, together with 20 pits and mines thoroughly equipped and three brickworks. The collieries were estimated to contain over 47,500,000 tons of coal and nearly 2,000,000 tons of ironstone. Since its formation considerable expansion has occurred, and additional interests have been acquired. Together with another company, a Spanish iron ore business has been acquired, the Coltness Company acquiring a two-thirds interest, the Company being the Alquife Mines and Railway Company, Limited. Further, an extensive coalfield in Warwickshire has been taken over and developed. The shares in the Alquife Company stand in the books at £300,000; the interest in the Warwickshire Coal Company consists of 100,000 Ordinary shares of £1 each, on which 1*s.* 3*d.* per share has been paid up. In order to cope with the expanding business the capital of the Coltness Company has been largely increased since its formation, and at the present time, out of an authorised capital of £1,000,000 there has been issued and paid up £850,000. It may be added that in addition to its ordinary business the Company has entered into the manufacture of Portland cement. During the 16 years that the Company has been in existence in its present form the shareholders have received an average return of about 14% per annum, the distributions ranging between a maximum of 30% and a minimum of 8%. In addition to this, however, substantial sums have been set aside from profits for various betterment purposes aggregating over £1,000,000. It will thus be gathered that considerable prosperity has attended the operations and a satisfactory career has been had. In order to show how profits and dividends have varied we give the following:—

	Net Trading Profit	Ordinary Dividend
	£	%
Year ended July 31, 1915 ...	160,341	10
.. .. 1914 ...	95,117	8
.. .. 1913 ...	157,102	15
.. .. 1912 ...	114,721	10
.. .. 1911 ...	126,721	10
.. .. 1910 ...	124,653	14
.. .. 1909 ...	94,643	10
.. .. 1908 ...	144,671	15
.. .. 1907 ...	239,318	30
.. .. 1906 ...	180,322	20
.. .. 1905 ...	127,340	10
.. .. 1904 ...	126,646	10
.. .. 1903 .	147,577	15
.. .. 1902 ...	98,393	8
.. .. 1901 ...	139,118	15
.. .. 1900 ...	188,852	20

From the profits of the past year a sum of £48,995 has been written off for redemption and depreciation, as compared with £38,146 twelve months ago, and a sum of £5,000 has been set aside to meet the expenses of relining, &c., of blast furnaces and extraordinary repairs to ammonia works. Hitherto during late years the allowance has been £3,000 per annum. The First Preference dividend requires £17,500 and the Second Preference dividend £8,250. There then remains a balance for the Ordinary shares of £80,596, as compared with £28,221 twelve months ago. This amount is sufficient to provide for a dividend of 23% on the Ordinary capital. The actual

distribution, however, is 10%, as against 8% twelve months ago, and after carrying £45,000 to the Ordinary reserve fund there is a sum of £17,851 carried forward.

In the following table we compare the manner of distributing the profits for the past six years:—

Year ended July 31—	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£

Carried forward	17,851	17,255	17,034	17,016	18,359	17,535

We have already referred to the fact that in addition to the large dividends that have been distributed, substantial sums have been allocated for reserve, depreciation, &c. The amount written off for depreciation is £598,342, while the sum set aside for repairs is £71,303, and the allocations to the ordinary reserve fund have reached a total of £425,000. In addition to this ordinary reserve fund there has been set aside a special reserve amounting to £50,000 for the purpose of securing the dividends on the 5% Preference shares. This special reserve fund, which must be maintained at £50,000, is invested in Railway Debenture and Preference stocks valued at £50,507. The special appropriations from profits since 1900 are as follows:—

To July 31	Ordinary Reserve	Depreciation	Repairs	Total
	£	£	£	£
1915	45,000	48,995	5,000	98,995
1914...	—	38,146	3,000	41,146
1913...	30,000	45,834	3,000	78,834
1912...	15,000	37,315	3,000	55,315
1911...	25,000	37,147	3,000	65,147
1910...	10,000	36,252	3,000	49,252
1909...	-	31,877	3,000	34,877
1908...	25,000	32,845	3,000	60,845
1907...	60,000	41,564	5,000	106,564
1906...	40,000	42,629	5,000	87,629
1905...	25,000	34,509	5,000	64,509
1904...	25,000	32,975	5,000	62,975
1903...	35,000	32,281	5,000	72,281
1902...	10,000	29,890	5,000	44,890
1901...	20,000	45,409	5,000	70,409
1900...	60,000	30,674	10,303	100,977
Total ...	425,000	598,342	71,303	1,094,645

From what has already been pointed out it will be gathered that the Company's position is a sound one, and on July 31, 1915, as compared with 1914, its liabilities and assets in abstract form were as follows:—

Liabilities.	1915	1914	*Assets.*	1915	1914
	£	£		£	£
Capital	850,000	850,000	Property	596,443	604,018
Sundry creditors ...	109,791	100,301	Stocks	244,696	299,349
Reserve funds, &c.	483,784	581,327	Alquife Mines and Railway Company	300,000	300,000
Profit & loss account	96,725	44,129	Sundry debtors ...	130,401	115,900
			Special reserve investment	50,507	50,507
			Cash and investments	218,253	205,983
	1,540,300	1,575,757		1,540,300	1,575,757

Speaking at the annual meeting on October 8, Sir William H. Houldsworth, Bart., the Chairman of the Company, said that some people appear to think that this year's industries are going to have great war profits, but that he could not see any indication in the Coltness works of exceptional profits. Of course the price of iron is higher, but there are various things to be set off against this. The Company has had less production in every department owing to scarcity of labour, and that, of course, means increased cost. Altogether, therefore, the Company will do well if it is able to maintain its dividend at 10%. On this basis, at the price of £2 for the £1 share, the yield afforded is a little over 5⅛%. The two classes of Preference shares yield 5⅜ and 5⅝% respectively.

We recapitulate below the prices, dividends and yields afforded on the Company's securities:—

Amount	Description	Par	Price	Dividend	Approx. Yield
£		£		%	£ s. d.
350,000	5% Cumulative Preference shares ..	1	19/0	5	5 8 1
150,000	5½% Cumulative Second Preference shares	1	22/0	5½	5 12 10
350,000	Ordinary shares	1	40/0	10	5 3 1

Correspondence.

MANCHESTER SHIP CANAL.

To the Editor of THE STATIST.

SIR,—For several years past I have endeavoured to induce the directors of the Manchester Ship Canal Company to render their annual statement of accounts in such a form as to disclose clearly to the shareholders all their capital and revenue expenditure. Hitherto my efforts have failed. It has become necessary, therefore, to appeal to the shareholders.

Last January, having prepared a circular with that intention, I personally asked the Chairman to allow 250 stamped envelopes containing this circular to be directed to large shareholders by the Company's staff. The Chairman refused this. Later on I found out by accident that all incorporated companies are obliged by Act of Parliament to print in December of every year a correct list of shareholders, with addresses, and to supply a copy to any shareholder upon payment of 5*s*. I thereupon applied for a copy of the Canal Company's register, and then discovered that the Company have neglected for sixteen years to have the list printed, and the office copy, which the Secretary lent me, was on very many pages so indistinct, through changes of ownership, as to be unreadable. The Directors promised, however, to prepare and print a revised list.

I am now in receipt of the new address book, and I find it has been produced in an unnecessarily expensive form, affording confirmation of my previously expressed opinion that, by expert investigation of the Company's methods of work and the appointment of an active Managing Director, our working expenditure might be considerably reduced. A reduction of 15% would mean a saving of over £100,000 per annum. But on examining the new address book I find that, although the Act of Parliament requires that an asterisk (*) should be placed against the names of all proprietors holding a director's qualification (200 shares), many names of shareholders whom I personally know to have over 200 shares have no asterisk attached to them. On going carefully through the book, with my previous knowledge of large holders, I should say at least half the asterisks are omitted.

So that our Shareholders' Association, already heavily handicapped by the neglect of the Directors to print the address book, is further hindered by the issue of a new book not properly marked up. When asked to convene an extraordinary meeting of shareholders for the purpose of appointing an expert to investigate the present extravagant methods of working, the Directors refused to do so unless we could obtain the signatures of shareholders holding 10% of the Company's capital. To do this it is essential that we should know who are the larger proprietors. The omission of the asterisks is, therefore, a grave defect, and a serious obstacle in the way of the movement for reform.

The Secretary informs me that the omissions were accidental, and that the necessary alterations will be made before the book is finally printed, but the copy I received was certainly the "finished article," but, even if this statement is correct, this would mean further delay, and it is rather singular that among the names to whom no asterisk is appended, are many prominent members of the Shareholders' Association.

EMPIRE METAL CONTROL.

Whatever the irresolution shown by the British authorities in tackling the metals question, it is something to be devoutly thankful for that Australia is free from the indifference with which the Mother Country is seemingly afflicted. Australia has already made up her mind that the days have ended for outside control or treatment of Australian copper, lead and spelter. It has been announced officially in Australia that arrangements had been made whereby the entire copper output of the Commonwealth, suitable for treatment by the electrolytic process, will be handled in Australia; also that a British group had secured the Imperial Government's approval of their purpose to distil in Great Britain the whole Australian output of zinc concentrates. As regards copper, it may be pointed out for the benefit of the uninitiated, that the metal resulting from the smelting of ores contains impurities which have to be removed before the copper is suitable for commercial use. There are two ways of refining this rough copper, one being by passing the metal through the furnace again, and the other by treating it by an electrical process which dissolves the rough copper and redeposits it in a pure form, the impurities sinking to the bottom of the tank. By the first process any gold or silver contained in the rough copper is lost, but by the second process it is recovered, hence, copper refiners have more and more favoured the electrolytic process to the disadvantage of the furnace treatment. Now British refineries are mostly of the furnace type, treating rough copper and converting it into Best Selected. On the other hand, the American refineries are mainly of the electrolytic variety and produce the well-known electrolytic copper. Each of these coppers has its special spheres of utility, "Best Selected" being mainly used in the brass trades, while "electrolytic" is used largely for the manufacture of electric wire, &c.

It has been a grievance with the British copper refiners that the Government did not patronise their product more extensively. They allege that years ago leading Government departments buying copper were unduly influenced to favour American electrolytic at the expense of British Best Selected, and that they, moreover, were induced to fix so high a specification for Best Selected copper that it became most difficult to conform to it, the result being that the supply was much less than need have been the case, while the Government bought more American electrolytic copper than it need have done. Even within the last few months we have seen large quantities of rough copper shipped from here to America under special permit for refining by the electrolytic process, the resulting copper being brought back to this country, and the British makers of Best Selected copper have got restive because they want the rough copper themselves. There is no doubt that as a commercial transaction the purchase of rough copper here at the very cheap prices that were paid for it, and its conversion into electrolytic copper in America was thoroughly justified, but the British refiners feel that they are being unfairly treated by this cutting off of the supplies upon which they rely for carrying on their operations, and they think, too, that the mere process of transferring copper from here to America in this way tends still further to increase the power over the market which American copper producers wield. They are, therefore, making protests in official quarters with a view to some alteration in this respect. It should be remembered that the copper which has been shipped to America in this way has not been shipped by producers, but by people who have bought it in the open market, and who have been able to make a handsome profit on the transaction. The British refiners, however, suggest that a much more satisfactory state of affairs can be brought about if the Government require all Empire-produced copper to be refined in Empire-owned refineries.

As will be seen from what is stated above, Australia has already resolved that her copper shall be refined locally, and thus within the Empire, and an extension of this principle to cover all Empire-produced copper would have a large influence upon the world's copper trade. For years past a considerable portion of Australia's production of rough copper, for instance, has been sent to America to be refined, and naturally every extra ton of copper which is placed under the control of American producers tends to strengthen their already powerful position. During recent years America has been stretching her tentacles further and further, until she has practically controlled the copper refining industry of the world, and any step which our colonies can take to put an end to this supremacy is worthy of whole-hearted support. America, of course, has been able to pay more for rough copper, too, than British refiners, because by the electrolytic process the bullion values have all been recovered.

Apparently it has been nobody's business to ensure that British copper was reserved for British use, and it has required a world-wide war to force home economic and commercial lessons. If we in England are still asleep it is a matter for national thankfulness that the colonies are awake, but the British refiners should bestir themselves and get their houses in order for the new state of things which will come when the War is over.

As regards the smelting in Great Britain of the whole output of Australian zinc concentrates, it has not been possible to obtain any confirmation here of the official statements made in Australia, and the matter on the face of it seems hardly to have been susceptible of such rapid decision. At all events, it would take a long time and involve an enormous amount of capital to put up a plant here or anywhere capable of handling the raw material supplies which are available. No doubt something will be done, though exactly what this will be remains to be seen.

OUTLOOK FOR THE COMING LONDON SALES.

The seventh series of London sales will commence next Tuesday. There is no diminution whatever in interest, due to a new season opening in Australia and at the Cape, and also to the present existing state of trade both at home and on the Continent. The War Office is to be commended for the sensible action it took last week in deciding to grant licences for the export of cross-bred tops, and we are glad to think that the Council of the Bradford Chamber of Com-

merce has been overruled. It has been patent for some considerable time to those who knew what was actually going on that that body has not represented the general feeling of the trade, and both for business and economic reasons, export of a commodity of which reasonable stocks exist should be encouraged, when they can be disposed of to safe destinations. Stimulus has been imparted to the whole textile trade, and the foundation laid for another wave of prosperity. It has certainly been cause for regret that while fine cross-bred wool has maintained a fairly steady level, cross-bred tops have sensibly declined, although for months the export of cross-bred yarns, in which leading members of the Bradford Chamber of Commerce are interested in producing, has been allowed. We certainly do not favour any return to the very high values which prevailed for tops in June, but on the general grounds of fairness, the export of cross-bred wool and tops to safe destinations can be allowed in reasonable quantities. With a prospect of doing a larger trade with our Allies a much better feeling obtains, and we believe that Italy will not betray the confidence imposed in her by our own Government.

Apart from the South American wools there are 138,500 bales of Colonial wools available, the bulk of which will be merinos. New Zealand will be represented by about 44,000 bales, mostly consisting of slipes, and we are looking forward to these meeting a very good reception. During the interval America has been a persistent buyer, and has done a good deal of seeking up in Bradford, all of which is interpreted to mean that considerable orders are still on the market. In all probability there will be further important buying on Italian account, particularly for scoured cross-breds, and possibly some slipes. From all accounts Italian manufacturers are unable to wait the length of time required for getting greasy wool scoured and press-packed, consequently orders for buying cross-breds will in all probability be forthcoming from outside sources, sufficient in volume to fully maintain and possibly improve last sales closing prices. The lifting of the embargo and the announcement that export of cross-bred tops is going to be allowed has had a beneficial effect upon top values, prices being raised 1*d*. to 1½*d*. per lb. for the bulk of qualities below 56's. Those favoured by our Allies figure around 46's to 50's, the very qualities that have suffered the greatest decline during the past two months.

Glancing down the wools which are available for sale, it is very patent that Sydney and Queensland will be very well represented, and if the wools show any length of staple we fully anticipate that they will receive the same hearty reception which they met with last series. South Australia, too, will have a look in, although the quantity from that State and West Australia is somewhat limited. We fully expect a nice offering of new clip, the following being the approximate quantities to be offered: —

	New Arrivals Gross Bales	Forwarding Direct Bales	Old Stock Bales	Total Available for Sale Bales
Sydney	90,600	60,500	8,400	38,500
Queensland	35,700	13,500	3,900	25,700
Port Phillip...	20,400	13,000	3,400	10,800
Adelaide	8,500	5,000	100	3,400
Swan River	4,900	—	800	5,700
Tasmania	400	—	100	500
New Zealand	16,800	1,500	28,700	43,800
Cape	41,000	32,500	1,600	10,100
	217,500	126,000	47,000	138,500

About 6,000 bales Punta Arenas and 800 bales River Plate will be offered this series.

Regarding prospects for prices, we anticipate that very little change will be seen in merinos. No doubt home trade topmakers and spinners will show the greatest preference for wools that are well grown, shafty, and fairly free of burr, while the faulty carbonising wools will sell somewhere about last sales values. Commission carbonising establishments are very busy and doing their utmost to cope with supplies, but the wools available far outweigh their capabilities, and we anticipate that these will be mostly bought by home trade woollen manufacturers who possess their own carbonising machinery. The most interest seems to centre around the course of cross-breds. We shall be greatly surprised if these do not move up a full 5%, possibly more for very good parcels. America wants them, so does the home trade, as well as Italy, consequently some persons are anticipating an advance of nearly 10%, but the improvement will depend entirely upon the demand there is on outside account. Slipes have been advanced during the interval 1*d*. to 1½*d*. per lb. by owners, and we think their attitude is fully justified. America in all probability will be a supporter of good three-quarter-bred lambs, and we fully expect these to move better than at the close of last series. The unfortunate part is that notwithstanding blanket manufacturers are exceedingly busy, they do not want low clothing slipes, because the blankets on orders are mostly brown, and require material very different from New Zealand slipes. However, we fully expect the call for these will be on the whole good, and that they will meet with a better reception than at the close of last series.

LANCASHIRE COTTON INDUSTRY.

THERE are further signs of some improvement in the conditions prevailing in the cotton industry of Lancashire. Demand in certain quarters is broadening, and although business of importance is not general, some sections are obtaining relief. Values are decidedly dearer than a few months ago, but prices in the raw material seem to be steadying on the higher basis, and our customers are showing more confidence in the level of prices which now rules in yarn and cloth. It is not possible to record any particular development in connection with probable supplies or consumption in raw cotton.

During the last fortnight a rather increasing demand has been experienced in piece goods for India. The buying has been chiefly in light fabrics such as dhooties, mulls, and jaconettes for Calcutta, but in grey shirtings limits are gradually being raised and buyers and sellers are nearer together than a little time ago. Certain Blackburn manufacturers have obtained slight relief, but their position still leaves much to be desired. The inactivity of shippers to China is very marked, especially in staple goods, and the unsettled political situation on the other side is very adversely affecting trade. Recent developments in the Near East have checked trade with that part of the world, and the export of goods on order is being stopped for the time being. More favourable advices continue to be received from South America, and a fair miscellaneous business is being done. Healthy reports are coming through from the home trade, and clearances are on an encouraging scale. The shortage of dyes continues to hamper many cloth merchants, and there are complaints of poor work being turned out by certain dyers.

Spinners of American yarns tend to improve their position. In certain counts and qualities the margin of profit is healthier than a few weeks ago. In coarse numbers rather fewer orders are now being met with, but producers have extensive engagements. A larger turnover has recently taken place in medium and fine numbers, and more satisfactory prices are being obtained than for a long time back. The lessened output as a result of the labour shortage prevents stocks accumulating in first hands. A feature is a fair amount of re-selling of yarn. Producers of twofolds are in a strong position, and in the lower counts doublers are engaged for several months ahead. A rather irregular business is passing in Egyptian yarns, and certain counts and qualities are still doing badly. In shipping

descriptions orders are placed rather unevenly. More has recently been done in dyed descriptions for India, and the demand for Holland in cops keeps up well.

It is reported that owing to the scarcity of operatives in the spinning branch of the industry a suggestion has been made by the Masters' Federation that the workpeople available should be distributed in such a way that the best use of the labour at hand may be made. It is proposed that some mills should be entirely stopped, and others run at full stretch, rather than part machinery be left standing in practically all the factories. It is believed, however, that great difficulty will be experienced in formulating a scheme which will be acceptable to all concerned.

Owing to the further refusal of the employers in the weaving section of the trade to grant a 5% War bonus to the operatives, the Trade Union officials are threatening to take more drastic action. It is understood that individual firms which are known to be doing fairly well are to be approached with regard to giving the bonus. This policy may result in notices to stop work being handed in at certain concerns with a possibility of strikes. It remains to be seen what will happen during the next few weeks, but the federated employers will be forced to support any member who is attacked in this way. Some of the masters are coming round to the opinion that, although certain branches of manufacture are depressed, the demand of the operatives is moderate, and it might be good policy to reverse their former decision, especially in view of the extraordinary crisis through which we are passing and the admitted big increase in the cost of living.

TROPICAL OILCAKE.

An opening for British and Colonial investment which has not yet received the attention which it appears to merit consists in the development for the British agricultural market of the tropical plants, trees, and roots which yield oil by expression and oilcake by further treatment, mainly compression. There seem to be two distinct types of investment mooted. That which in the end should pay most steadily is probably the cultivation of oil-bearing trees, such as the palm nut and the coco nut. There is, however, need in these cases for a long period of waiting, and the main encouragement to such patience as is undoubtedly required is in the agricultural situation. This has not as yet been fully envisaged by purely commercial interests, and may therefore be briefly stated.

For the last 20 years Smithfield and other fat-stock shows have been undergoing a progressive change, which has been almost theological in its resemblances. We have first the Victorian Era, when the big, fat beast was everything, and slowly matured animals occupied the arena. Any exhibit at all young or on the slim side had no chance. Then came the Edwardian era, the brief age of tolerance. How to promote early maturity and the rapid putting on of flesh was studied side by side with the old policy, now on its trial, of building up a massive animal yielding large and fine joints. To-day the Georgian era is fully established. Those who pleaded for an Edwardian tolerance are now become the persecutors, and animals over three years old are beginning to be excluded from the shows. Advanced progressives, the zealots of the new cult, are even advocating an age-limit of two years.

Now, what has this to do with tropical oilcake? It has very much to do with it. This rapid formation of fat and flesh in due proportion, this early maturity now so valued, is the product of oilcake, and of the oilcakes producing it those from the tropics are materially the cheapest. Hull, with all the wonderful machinery of its oil mills and crushing appliances, cannot give us linseed cake under 11*s.* per cwt., but both London and Hull can produce coconut cake for 8*s.* The demand for oilcake not only admits of an almost indefinite extension, but with increased reliance on our own flocks and herds, such as the War will almost certainly leave as one of its results, the farmer will rely less and less on grass and corn, more and more on the speedier method of feeding. He will be enabled to pay an adequate price for the cake because of the saving in the labour bill, which every year becomes more and more the farmer's bugbear. Agricultural wages since 1901 have risen in a greater percentage than commercial and industrial. The quicker turnover seems destined to become more and more the breeder's and feeder's chance. It may, therefore, be affirmed with confidence that the plantation of such tropical trees as will serve the oilcake trade is justified by the outlook. By the time the trees are in full bearing the demand for the product is likely to be excellent and constant, also steadily on the increase.

There remains a minor but not wholly unimportant culture—namely, that of the earthnut arachis. This does well both in India and West Africa, and probably would succeed in other regions within the tropics. It has the advantage of a prompt return. A low-growing plant, a branchless, earth-trailing bean, it has acquired the valuable habit of pushing its pods or nuts into the sandy loam that it loves, and there they fill out and develop. Their content of oil is surprisingly large for their fight against a tropical sun. There seems to be no near prospective limit to the sale of these oilnuts at about 14*s.* per cwt., and the advantage of their cultivation is that they should pay a dividend within the year of the plant being established.

While the British Empire may hope to see an important development of these agricultural and commercial industries in the near future, the French possession of Morocco, within an easy reach of the Channel ports, is expected to result in an extended growth of the ground nut and a wide plantation of oil trees. The soil of Morocco is adapted to both cultures, and the shortness of the voyage to the great purchasing centres is entitled to rank as a permanent asset.

RAND GOLD OUTPUT.

(*Continued from page* 151.)

Aurora West United.—There are in issue 212,705 10*s.* shares, and a favourable opportunity will be taken for a further issue to deal with floating debt, the total authorised capital being £300,000, in 600,000 10*s.* shares. Net floating indebtedness at December 31 about £105,000. Plant—80 stamps and a tube mill; capacity increased to 15,000 tons monthly.

THE BANK ISSUES CIRCULAR LETTERS OF CREDIT available in all parts of the world.

COMMERCIAL LETTERS OF CREDIT issued.

PURCHASE AND SALE OF STOCKS AND Shares effected.

DIVIDENDS, ANNUITIES, &c., received.

EXECUTOR AND TRUSTEE BUSINESS undertaken.

The Officers of the Bank are bound not to disclose the transactions of any of its customers.

WORLD BANKING AND THE WAR.

THE COST.

Writing in May of last year we said: "At no time in history has the economic condition of the world improved as rapidly or as much as in the past hundred years, and at no time has the mental uplift of the average man been greater. Nor has progress been confined to one or two nations, as it was apt to be in former times; it has extended round the world from East to West and from North to South. The wealth of the United Kingdom in 1814 was computed at about £2,500,000,000, while a conservative estimate would place it now at about £17,000,000,000, a sixfold increase, while population has grown less than two-and-a-half-fold, or 130 per cent. The income of the British people in this period has increased about eightfold, from £300,000,000 to £2,400,000,000. The wealth of France has expanded fivefold, from under £2,000,000,000 to nearly £10,000,000,000, while her income has raisen from £250,000,000 to about £1,200,000,000, with only a one-third-fold (33 per cent.) increase in population. The progress of Germany has been equally remarkable. A century ago there was no Germany—only a number of German States by no means over-burdened with income or with riches. Their aggregate wealth and income were probably less than France's. Now United Germany is estimated to possess an income of nearly £2,000,000,000 and accumulated wealth of about £16,000,000,000. During the century Germany's population has grown from 24 millions to over 67 millions, or 180 per cent.

"But if the economic welfare of the older countries has improved in this remarkable manner, what of the younger States, which have attracted vast numbers of persons from the densely populated districts of Europe? The progress of the new countries is still more noteworthy, and the advance in the well-being of their citizens still more marked. For the most part the persons who migrated to them were inconceivably poor and destitute, and these have attained incomes and wealth much greater, on the average, than persons who elected to remain in the older countries. During the last hundred years the wealth of the United States has increased from about £350,000,000 to something like £30,000,000,000,* or nearly ninety-fold; and the income has risen from less than £100,000,000 to about £7,000,000,000 a year, while population has grown from 8 millions to 98 millions, a twelvefold expansion. The progress of the other young countries has been small in comparison with the growth of wealth in the United States; nevertheless, when one remembers the meagreness of the populations of Canada, of Australia, of the Cape, and of South America, and the smallness of their incomes in the early part of last century, the really wonderful advance in their economic well-being becomes apparent."

"In the four countries referred to the combined annual savings are now in the neighbourhood of £2,300,000,000 a year, whereas their total income a century ago was no more than £1,100,000,000, out of which they saved less than £200,000,000. The combined income of these countries has now risen to about £12,600,000,000 per annum, mainly in consequence of the great sums now saved from year to year, and by means of the credit system rendered available for expanding not only their own but the world's productive power."

And in conclusion we expressed our conviction that "If no great wars come to destroy wealth, to render the worlds' new savings relatively unproductive, and to create distrust, the uplift in the economic welfare of the whole race will be much greater in the current generation than ever before, while the progress which will be made during the present century may be beyond imagination. Indeed, no limit can be placed upon mental progress and economic well-being as long as men continue to be animated in ever greater measure by the spirit of trust and of confidence which has brought to everyone so great a measure of welfare in the past century."

The Great War that has so often threatened to break out has at length arrived, and nations which formerly brought great benefits each to the other and to the rest of the world by their mutual confidence and friendship, and which grew in well-being in consequence of the universal prosperity they helped to create, are now at enmity with each other, and in place of creating wealth and adding to their own and the world's welfare, they are destroying wealth and creating distress, both immediate and prospective, in a measure and in a manner beyond description.

And when one recollects that the nation directly responsible for this war had gained untold advantage from the maintenance of peace, that the wealth of Germany was growing as never before, and that the average well-being of her expanding population was rising fast from decade to decade, one is at a loss to account for her crime against humanity—for when every allowance is made it is a crime—that has plunged the race into a disaster of such unparelleled and appalling proportions.

In the great struggle in which the greater part of the world is now engaged all the forces which during the past century have so powerfully contributed to the work of construction and of upbuilding have been diverted from their normal action, and directed to the unprofitable work of demolition and destruction. Indeed, were it not for the machinery of modern life so great and so costly a war could not be waged. The whole world is being laid under contribution to supply the needs of the combatants, and the fight is being waged on land and sea, in the air, and under the sea, with every device that vast wealth can pay for, latter-day skill can invent, and modern appliances render practicable.

And just as the world's banking system was one of the principal agents that rendered possible the unprecedented expansion of production and of wealth in the past century, so in the existing struggle it is by far the most important part of the machinery for enabling these fighting forces of limitless power to be brought into and maintained in action.

In brief, the great inventions and the highly developed machinery of production and of distribution, which have made such generous contributions in modern times to the general well-being, are now being devoted not to increasing the productivity of the world, but to diminishing it, and both life and treasure are being destroyed on a scale so vast that the mind is almost incapable of comprehending the extent of the destruction or all that it involves.

And the highly developed machinery of banking is contributing its full quota to the work of carrying on the War in all the belligerent countries; indeed, without its contribution the War could not be continued for more than a few days, for it is through the banks that most of the money is collected from the public for carrying on the War. Indeed, no small part of the vast sums of money expended on the War is banking money, as distinct from investment money, and it is the money lent by bankers, both directly to the Governments at war and indirectly by loans to investors, that is providing the greater part of the funds expended upon the War.

* Since the above was written a new census of wealth in the United States has revealed a total of about £3[illegible],000,000,000.

Before one endeavours to form some idea of the contributions which bankers are making to the funds for carrying on this great War, and of the total sums expended, it is essential to realise certain fundamentals if one is to avoid false conclusions and erroneous deductions. The importance of forming a correct view of the financial effect of the War will, of course, be obvious, especially in discussing the effect of the War upon the position of banks both in belligerent and in non-belligerent countries.

The first thing to recollect is that the War does not mean any appreciable destruction of the world's capital as it existed prior to the war. Where property (houses, ships, machinery, &c.) is injured by gunfire, by bombs, or in any other way, or houses, buildings, machinery and other property are allowed to deteriorate, or stocks of goods accumulated before the War are consumed and are not replaced, there is destruction of pre-War capital; but even during the War the construction of houses, factories, ships, &c., is continuing in most countries, and, as far as it is possible to come to a conclusion, the wastage of old wealth through the War is made good, or nearly made good, by the creation of new wealth of a permanent character. Whether or not this condition of things will continue throughout the War cannot be foretold. As the War becomes more and more costly it is possible that no new buildings or houses will be erected in the belligerent countries, and that the maintenance outlays will be inadequate; but unless the War is a very long one it may be doubted if there will be any substantial reduction in the pre-War wealth of the belligerent countries due to these causes, while the wealth of the neutral countries as a whole should show appreciable increase. The increase in the latter will not be nearly as great as it would have been but for the War; still, it should be appreciable.

The wealth destroyed by the War will consist, first, of the savings that would have been available for new construction in the countries engaged in the War, or which may be lent to them by other countries, who but for the War would have employed their savings in adding to their own productive power; and, secondly, of capital withdrawn by a belligerent nation from other nations and consumed by it, a process which involves the payment of the capital withdrawn by the nation which loses it out of its savings, and a consequent reduction of the amount of its savings available for reproductive purposes.

In brief, the existing great war expenditures do not involve a diminution in the aggregate wealth of the world as it existed prior to the War, but it does mean a very small addition to that wealth during the War, and that the addition to the wealth of non-belligerent countries will be in some measure neutralised by the diminished wealth of belligerent countries which suffer either from the destruction of property, or from need to borrow abroad or to sell their foreign investments in order to meet their war expenses.

Having regard to the military tactics hitherto pursued of trench fighting, and of not defending populous towns, it is evident that the destruction of buildings, houses, and other fixed property by the War will not be great. The damage to property caused by Zeppelin raids is, of course, negligible, and the destruction of shipping by submarines is quite unimportant. Moreover, so far the sales of securities to and the raising of loans in other countries are not a serious matter. Great Britain has, it is true, called home a good deal of the floating capital she employed abroad before the War, has sold a moderate amount of her American investments, and recently has contracted in the United States, in co-operation with France, an Allies' loan of £100,000,000, but against the capital thus brought home she has lent large sums to her Allies and Colonies and foreign clients. Moreover,

a good deal of new capital has been invested in houses, factories, ships, and machinery at home since the War began, and it is evident that on balance the reduction in the wealth of Great Britain since the War began, in spite of her great war expenditures, has been insignificant. Whether this condition of things will continue is, of course, unknown. It depends upon the extent of our war expenses and how far they are met by economies in our domestic expenditures.

The nation's expenses for government and war purposes, including loans to Allies and Colonies, are now at the rate of nearly £5,000,000 per day, and to meet this great expenditure substantial amounts of capital must be called in or borrowed from abroad, and the sum so called in will appreciably exceed the amounts lent to Allies and Colonies if the domestic expenditures of the nation are maintained at their present high level. Should, however, the domestic expenditures be substantially reduced, as they can and may be reduced, then on balance the capital called in or borrowed from other countries will be neutralised, or nearly neutralised, by the money lent to Allies and Colonies, and the reduction in the aggregate of Great Britain's pre-War wealth will be inconsiderable.

The situation of France is very similar to that of this country. The amount of money that France is calling in from or borrowing abroad is not large, and is in part set off by loans to Rusia. The actual physical destruction of pre-War wealth by the enemies' shells has to be reckoned with; but when everything is taken into account it is evident that the pre-War wealth of France has not been substantially reduced, in spite of the fact that her income has been temporarily curtailed by the occupation of territory by the enemy and by the absence of tourists.

Again, the destruction of property in Russia is not a great matter, having regard to the peaceful evacuation of important towns and their escape from bombardment, and although Russia may need to borrow substantial sums abroad to pay for goods imported in consequence of the impediment to exports caused by the closing of both the Dardanelles and the Baltic, these borrowings will be in some measure offset by new capital expenditures within the country upon permanent works, houses, &c.

Much the same situation prevails in Germany, Austria and Turkey, which, being unable to export any appreciable amount of goods, are under the necessity of borrowing abroad to pay for imports. Austria and Turkey are borrowing moderate sums in Germany, and the latter is selling securities and borrowing in the United States. But against the sums thus borrowed must be placed the capital expended upon new works and houses, and on balance the consumption of these nations' pre-War capital is not a great matter.

It is obvious that the pre-War wealth of the neutral countries is not reduced by the War, but is increased by the purchase of securities from the belligerent nations.

In brief, the expenditure of great sums by the belligerent nations upon war is preventing the usual growth of their wealth, but is causing only a very small diminution in the wealth they possessed prior to war. Hence for all practical purposes the wealth of the various nations is substantially unchanged at the amounts we gave last year, less, of course, the shrinkage in the market value of property and securities arising from the rise in the rate of interest. The latter factor should, however, be in large measure disregarded, as when the War is over and capital again accumulates rapidly the rate of interest and the value of property will probably return to levels not far removed from those prevailing prior to the War, especially if the world adopts measures for the prevention of great wars. Even if values do not fully recover to their pre-War level, capital will be as effective as, and perhaps more effective than, it was before the War in wealth production, owing to the desire or necessity of everyone to work harder and more efficiently. Hence the income derived from pre-War capital may be as great as, or greater than, it was before peace was broken. It will be realised that the true measure of the wealth of nations is the annual real income derived from its use, not the number of years' purchase of that income, which is liable to wide fluctuation.

But with no appreciable reduction in the store of capital accumulated by the world prior to the outbreak of the present War the loss of wealth will still reach a gigantic figure. Roughly speaking, the war will prevent any substantial addition to the world's wealth as long as it lasts. When one recollects that normally the wealth of Great Britain grows at the rate of about £400,000,000 a year, of Germany some £300,000,000 a year, of France over £200,000,000 a year, and of the other belligerent nations in the aggregate at the rate of some £600,000,000 a year, and that during the War the whole of the wealth that would otherwise be accumulated, amounting in the aggregate to some £1,500,000,000 a year, will be destroyed, one obtains some idea of its enormous cost and of its economic consequences. Moreover, the loss to the world arising from the absence of wealth accumulation in the belligerent countries is not the total loss. All the countries engaged in war are borrowing abroad, realising securities, or calling in capital, and although the amount of money that can be obtained in this manner is governed by the ability of what normally are the borrowing nations to supply it, the amount so obtained is very substantial, and it is evident that the greater part of the savings of the entire world are being used to meet the war expenditures. As far as it is possible to obtain the data, the belligerent nations are not only using their own normal savings of about £1,500,000,000 a year for war purposes, but are withdrawing capital from the rest of the world, or borrowing money from the neutral nations, at the rate of about £700,000,000 a year. Hence the total loss of wealth to the whole world, in comparison with the accumulation that would take place but for the War, is in the neighbourhood of £2,200,000,000 a year. The ultimate effect of this great destruction of wealth upon the world's welfare cannot be other than serious. It means that for the time being practically all the important works of construction in every land have had to be suspended, and that little provision is being made for the world's increasing needs in future years. Luckily these conditions have come at a propitious moment; otherwise their results would be much more serious than they will now be. In the last 10 or 11 years the world has expended an unparalleled amount of money upon works of construction designed to provide for a vast increase in production. The works that have been constructed in all the young countries, especially in the United States, in Canada, in Argentina and in other South American countries, are practically completed, and with a relatively small further expenditure of capital it will be possible to increase the world's productive power in a very great measure. The savings that are now being destroyed would, for the most part, have been devoted to the construction of houses, and to the improvement of the cities and towns of Europe, and generally to raising the standard of life for the whole of the populations of Europe, and in some measure for the dense populations of Asia. It is this work that has had to be suspended, and will now have to be postponed until a long period of peace and of efficient work provide the wealth to permit it to be undertaken. Thus the action of Germany in making the war upon mankind will reduce the standard of comfort that has hitherto been enjoyed by the European nations, and will specially injure the German people, who were securing so great a share of the increasing

wealth and so much advantage from the growth of world prosperity.

How much the economic condition of the world will suffer in proportion to its population in consequence of the War will be governed by its duration and the aggregate loss of men and of treasure. If the War were brought to an end in the early future, the world would probably recover from the injury in a relatively short time; but if it were to last for two, three, or more years, then the injury will progressively increase, and a very much longer period will be needed for recovery. Fortunately the War will not absorb the whole of the world's new savings, and it is evident that the high prices of food and raw material will encourage farmers, mine owners, and others, to extend production. The injury caused by the destruction of savings will thus be minimised in some measure. But when all these considerations are taken into account, it is obvious that the immense growth in the world's wealth—by which we mean productive power—which has gone on from decade to decade since the Napoleonic wars has received a serious check, and that while the War lasts the growth will be very small. When peace is restored, however, the increased efficiency of the belligerent nations should cause production to increase with greater rapidity than in the past, and the adverse economic effect of the War be gradually ameliorated. Thus we have come to the conclusion that the wealth accumulated by the world prior to the War has not been, and is not being, reduced appreciably, but that while the War lasts the greater part of the new savings of the whole world will be destroyed. Calculations have been made that the destruction of wealth through the War is equal to the sums expended upon the War. If this were the true situation, the injury caused by the War would be great indeed, for in the fourteen months of war the money expended by the belligerent nations has amounted to the great sum of about £4,275,000,000. The approximate amounts spent by the various countries upon war in the first fourteen months are as follows:—

War Expenditures, July 31, 1914, to September 30, 1915.

	£
Great Britain	1,072,000,000
France	823,000,000
Russia	750,000,000
Italy	130,000,000
Total Allies	2,775,000,000
Germany	900,000,000
Austria	550,000,000
Turkey	50,000,000
Total Central Powers	1,500,000,000
Grand Total	4,275,000,000

In the first few months of war the expenditures were comparatively small; but it is obvious that the belligerent nations are now spending an aggregate sum of about £4,400,000,000 a year upon the War. This is about twice the aggregate amount of their normal annual savings, plus the sums they are borrowing from other nations, and the amounts of their own capital they are bringing home from abroad.

In calculating the amount of wealth destroyed by the War it is essential to recollect that the great armies now engaged in fighting, numbering some 17 millions of men, would in any case have to be maintained out of ordinary income, and that the War expenditures have been attended by a great reduction in domestic expenditure. A large part of the money expended for war is, indeed, maintaining not only the armies, but vast numbers of people engaged in production and distribution. Probably one-half of the people of Great Britain are being maintained out of

the War expenditures, and the domestic expenditures of the nation are, more or less, correspondingly reduced. And a similar situation must exist in other belligerent countries. Hence it is erroneous to assume that the wealth of the belligerent countries is being reduced to the full extent of the war expenditures or of the war loans that are being created. As far as it is possible to obtain the data the net cost of the War to the belligerents is about one-half of its total cost. And of the net cost about two-thirds are being provided out of the normal savings of the belligerent nations, and about one-third out of the savings of neutral countries. Altogether it is probable that about three-fourths of the savings of the entire world are being employed to meet the cost of this world-wide conflict. In May of last year, when the last number of this Banking Section was issued, the world's wealth was growing at the rate of upwards of three thousand million pounds sterling a year. In the past twelve months, in consequence of the War and of the financial and economic disturbances caused by the War, the increase has been not more than a thousand millions sterling, and in the current twelve months of maximum war expenditures the addition to the world's wealth on balance may be not more than a few hundred millions of pounds sterling. As soon as the War comes to an end, however, and wealth is no longer being destroyed as it is now, the accumulation of wealth by the whole world should again be at the rate of over three thousand millions a year. If the belligerent nations become increasingly efficient and hardworking in consequence of the discipline of war, the expansion in the world's productive power and in its accumulated capital after the War is over may indeed be so great that the vast amount of wealth now being destroyed will be rapidly recovered, and it may be that the economic effects of the War will disappear sooner than anyone now ventures to hope for or dares to calculate.

THE INFLUENCE OF BANKING.

It would be difficult to exaggerate the part played by banking in providing all the money needed to carry on the War. The assistance which bankers in this and in other countries have been able to give to their respective Governments has been rendered all the greater by the practice of various Governments in paying their accounts in cash, and thus reducing the usual demand for banking accommodation of merchants and traders. This has been particularly noteworthy in Great Britain, where, since the War began, business has been in great measure transacted upon a cash basis in consequence of the Government's cash payments. A very large part of the nation's banking funds have thus been set free to finance the Government. It is computed that the supply of bills in the London market has been reduced by 60%. The result of this situation is that British bankers have received both from British merchants and from merchants in foreign countries large sums of money in payment of bills and advances. Moreover, one of the consequences of the payment of these foreign accounts has been to bring to Great Britain large quantities of produce in redemption of debt for which no return payment had to be made. Continental nations which did not possess this large fund of floating capital in other countries have met the situation by the issue of bank-notes. In Great Britain the expansion in the note circulation has been relatively insignificant, and the notes that have been issued have been merely for the purpose of mobilising the substantial sum of gold coin in circulation. British bankers have thus been able to place at the service of the Government some £300,000,000 of banking money in consequence of the maturity of their bills and the repayment of their advances plus their new deposits. Of the total sum of about £1,232,000,000 which Great Britain has now raised for war purposes, including the last instalment on the 4½% War Loan, British bankers have supplied some £214,000,000 by the discount of Treasury bills, they have taken some £33,000,000 of Exchequer bonds, and they have subscribed and paid for something like £350,000,000 of war loans. Altogether the money directly provided by British bankers for the War is not far short of £600,000,000, or, roughly, about one-half of the total sum raised by the creation of debt. The war loans of Great Britain are as follows:—

Great Britain's War Loans.

	£
November 1914. 3½% War Loan	350,000,000
March 1915. 3% Exchequer Bonds, net ..	33,600,000
July 1915. 4½% War Loan	585,000,000
October 1915. 5% American Loan ..	50,000,000
Treasury Bills	214,000,000
Total War Debt	1,232,600,000

In considering the war expenses of Great Britain it is essential to recollect that the British people are finding a substantial sum of money for their Allies and Colonies, and that, out of the loans from the public of nearly £1,232,000,000 so far raised they have probably lent to other countries a sum of £350,000,000, so that their own war expenditures have involved borrowings of rather less than £900,000,000. The sums lent are a capital investment, and must be placed against the capital withdrawn from or borrowed from abroad. The note circulation of the Bank of England has increased only £3,000,000 since the War began, but £76,000,000 of Currency notes have been placed in circulation, so that the total increase in the note circulation has been rather less than £80,000,000. Against this increased note circulation £48,000,000 of gold has been accumulated in the Bank of England, and probably an additional amount in the joint-stock banks. The additional notes have, indeed, merely taken the place of the gold coin in general circulation prior to the War and provided bankers with somewhat larger cash balances than usual.

In Continental countries, which possess a much smaller quantity of floating capital abroad than Great Britain, the Governments have been largely assisted both by the investment of banking funds and by a great increase in the circulation of bank-notes. Exactly how many bank-notes Germany and Austria have issued is unknown, as no statement has been published by the Austro-Hungarian Bank since the War began. Prior to that, however, the note circulation of the Bank fluctuated in a manner very similar to the note circulation of the Bank of Germany. The note circulation of the latter Bank since the War began has increased from £94,000,000 to as much as £288,000,000, and it is probable that the expansion in the note circulation of the Bank of Austria has been equally great and that the note circulation of Germany and Austria combined has risen from £183,000,000 to £568,000,000, and that as much as £385,000,000 of the joint war expenses of the two countries has been provided for by the issue of bank-notes. The gold circulating in Germany and Austria has, of course, been mobilised, but there is no information as to the condition of the Austro-Hungarian Bank. The stock of gold in the Bank of Germany has risen from £62,000,000 to £121,000,000. Much doubt exists as to how this great increase in the stock of gold in Germany has been brought about, especially having regard to the heavy shipments of gold from Germany to Holland to pay for produce imported, and it is surmised that the addition to the stock of gold in the Bank of Germany represents all the gold mobilised from circulation in both Germany and Austria-Hungary. Certainly, as far as information is available, the amount of gold that came out of circulation in Germany was not nearly sufficient to account for the increase in the stock of its gold, nor is it to be accounted for by the addition of the 10 millions of gold previously held in the war chest at Spandau. Thus, having regard to the non-publica-

tion of the return of the Austro-Hungarian Bank, it is probable that the gold accumulated in the Bank of Germany includes all the gold withdrawn from circulation in both countries. Very great assistance has been rendered to the German and Austrian Governments by the State banks in expanding their note circulation, and also by the joint-stock banks, who have themselves subscribed, or induced their clients to subscribe, for almost the whole of the loans issued. The amount of the German loans so far raised is as follows:

Germany's War Debt.

	Marks.
September 1914, 5% War Stock	3,492,000,000
,, 5% Treasury Bonds ..	1,000,000,000
February 1915, 5% War Stock	9,103,000,000
September 1915, 5% War Loan	12,101,000,000
Treasury Bills (approximate)	4,304,000,000
Total War Credit obtained	30,000,000,000
=	1,500,000,000

Of this total it would appear that a very large proportion has been provided by German bankers. They have been able to do so partly because of the addition to their deposits brought about by the huge war payments and by the great expansion in the note circulation, and partly because the cash payments of the German Government have reduced the quantity of bills presented for discount by private traders. At the end of last December, in fact, the bills held by the six leading banks of Germany were nearly 50% less than the amount discounted at the end of the previous year, setting free in the case of these banks some 70 millions sterling. The assistance rendered to Austria-Hungary by the banks of that country has also been invaluable. Beyond a great expansion in the note circulation of the State Bank, the joint-stock banks have invested very large sums of money in the war loans, and at the same time have been willing to make advances to their customers up to a high percentage of the Government debt purchased by them.

New 5½% Austro-Hungarian war loans are now being placed. Excluding the third Austro-Hungarian loans, the amount of publicly issued loans is 337 millions sterling. Beyond the Government has created a substantial floating debt, and it is probable that the total amount of debt created by the Dual Monarchy is about 550 million pounds, plus the new debt which is now in course of issue.

The French banks have done all within their power to provide the French Government with the great sums of money it needed at a time when the task of providing money was specially difficult in consequence of the invasion of France by the enemy, and the danger to which Paris was for a short time exposed. In this time of difficulty the Bank of France rendered invaluable service to the nation, and it was able to do so because of the very high place it held in the estimation of the French people, who freely accepted its notes. Since the War began the Bank of France has lent to the Government a sum of no less than £280,000,000. The expansion in the

note circulation of the Bank of France during the War has been £314,000,000. Beyond the money borrowed from the Bank of France, the public generally, and the joint-stock bankers, have subscribed nearly £500,000,000, and including the loans raised in England and in America the total sum borrowed is slightly over £800,000,000. The War debt of France is as follows:—

War Debt of France.

	Fr.
Advances from the Bank of France	7,000,000,000
French Treasury Bonds to be held by the Bank of France in order to make advances to foreign Governments	550,000,000
3½% Loan of July 1914	500,000,000
Bon de la Defense Nationale	7,871,000,000
Obligation de la Defense Nationale	2,241,000,000
Loan from England	1,250,000,000
Loan from America	1,250,000,000
Total sum borrowed by France for the War	20,580,000,000

The Bank of Russia has also rendered yeoman service to the Russian Government and to the Russian people, having made loans to the State since the War began amounting to some £255,000,000 by increasing its note circulation. The total amount of money borrowed by Russia up to the present time is about £817,000,000, and of this great sum Russian bankers have supplied a substantial portion. The War debt of Russia is set out below:—

War Debt of Russia.

	Roubles
5% Short Term Treasury Bonds placed with State Bank... ...	2,555,000,000
5% Long Term loans	2,000,000,000
Short Term Bonds placed in England	500,000,000
Short Term Bonds placed in France	625,000,000
Treasury Bills, &c.	1,320,000,000
Total	7,000,000,000
Say	£750,000,000

The adhesion of Italy to the Allies is of comparatively recent date, and her War expenditures have so far been small in comparison with the great expenditures of the Allied Powers. Altogether the Italian Government has borrowed about £130,000,000, and of this sum about £50,000,000 has been supplied by the Bank of Italy. The War debt so far incurred by Italy is as follows:—

War Debt of Italy to October 1915.

	Lire
December 1914. 4½ per Cent. Loan	1,000,000,000
July 1915. 5 per Cent. Loan	1,000,000,000
Loan from Bank of Italy	1,216,350,000
Total War Debt	3,216,350,000
	£130,000,000

The effect of the War upon banking in neutral countries has also been noteworthy. By creating a great demand for the goods of all nations, and by bringing about an average advance in prices of commodities amounting to about 33%, the trade balance of all the neutral countries has been benefited. Prior to the War most of the countries outside the war area were importing capital from abroad, and consequently their imports were large while their exports were small. The stoppage of the influx of foreign capital into these countries has appreciably curtailed their imports on the one hand, while the War has stimulated and assisted the exports of their goods. Hence their favourable trade balances enable them to import gold, whereas prior to the War they were exporting it. The change in this situation of the United States is especially dramatic. Before the War gold was being exported from America in large sums, in consequence of the greatness of the imports and the smallness of the exports, as well as of the return of a substantial amount of American securities from the Continent. At first the outbreak of war disturbed the situation in the United States and accentuated the movement of gold outwards, the foreign demand for American produce being reduced just at the moment that large sums of money to provide for tourist and other expenditures had to be remitted abroad. Since then, however, the demand for American produce and American goods has become so great that the value of the country's exports is far greater than it has ever been before, and its favourable trade balance is permitting it to import gold in large amounts and

at the same time to lend substantial sums of money to European countries. Hence, in face of the continued efflux of gold in the later months of 1914, there has been an addition of some £51,000,000 to the stock of gold in the United States since the War began. Holland has also derived much benefit from the War, and its favourable trade balance has enabled the Bank of the Netherlands to increase its stock of gold since the War began from £13,000,000 to £32,000,000. The financial situation of Spain has also been wonderfully improved by the War, and whereas early in 1914 a gold premium existed, the large purchases of Spanish goods have more than rectified the trade balance of that country, and instead of the peseta being depreciated, it has appreciated, while the stock of gold in the Bank of Spain has risen from under £22,000,000 to £30,000,000. Although Japan is one of the belligerent nations, and incurred a great deal of expenditure in its successful effort to deprive Germany of Kiau-Chau, it is now deriving substantial advantage from the War, as its exports of goods have very largely increased. Since the War began the note circulation of the Bank of Japan has declined nearly £10,000,000, while the stock of gold is less than a million down, while recently the balance of trade has become so favourable to Japan that the Government has been able to pay off in London a substantial amount of Japanese Treasury bills. Indeed, it is possible that during the War Japan may be able to redeem a substantial amount of her foreign debt by means of her exports. To show the effect of the War on the banking situation in the various countries of the world we set out below comparisons, first of the notes in circulation, and, secondly, of the amount of gold held.

* Prior to War.

From the above statement it will be seen that the great banks of the world have accumulated a very large stock of gold during the War, the amount having risen from £991,000,000 to £1,194,000,000, an expansion of no less than £202,000,000. Since the War began the world's production of gold has been about £115,000,000. A good deal of this has, of course, been absorbed by the arts. When allowance is made for the new gold that has been paid into the great banks, it is obvious large sums of coin have been withdrawn from circulation to be replaced by notes. Of course, the enormous amount of notes circulating in the belligerent countries, other than in England, at the present time will rapidly return from circulation as soon as the War is over and their accumulation in the great banks will enable the various Governments to fund them. The advantage which has been gained by the ability of the Continental nations to expand their note circulations in the way they have done for the purpose of meeting a substantial part of their war expenses, bears striking testimony to the confidence reposed by the peoples of the various countries in the stability and strength of their great banking institutions. While the War lasts it will be natural for everyone to desire to keep in his possession a substantial amount of notes against contingencies, but it is equally evident that when the War is over and peace is restored, the public will prefer to own interest-bearing securities instead of bank-notes.

To give as clear a view as possible of the effect of the War upon the position of the banks in the various countries we have made a series of tabulated statements. The situation in individual countries is commented upon in the articles dealing with individual banks contained in this Supplement, and we therefore present the summary tables without further comment. The effect of the War upon British banks as shown by a comparison of their position at the end of June last and at the end of June of the previous year is as follows:—

* Exclusive of [illegible] of Ireland, which show separately.

Our summary of the situation of the great banks of France is only made up to the end of last year. Nevertheless, it gives a very clear indication of the manner in which the banks of France are helping to finance the French nation.

A similar statement relating to the six leading banks of Germany up to the end of 1914 shows that the German banks are also subscribing very freely for war loans, and are generally assisting their government to raise the great sums of money now being expended.

Owing to the action of the Austro-Hungarian Bank in discontinuing to issue its statements, we are unable to present a comprehensive statement of the situation in Austria, but to show what is going on we give a comparison of the position of the three leading banks of Austria:—

INASMUCH as the African Banking Corporation was formed in June 1890 it has now completed 25 years of existence. The authorised capital is £2,000,000, in £10 shares, of which there have been subscribed 120,000 shares, on which £5 per share has been called up, thus making the issued capital £600,000. The head office of the Bank is in London, and there are 43 offices open in South Africa. In 1895, while the paid-up capital was £297,645, there was no reserve fund; but since that date substantial sums have been set aside each year, and at September 30, 1914, the reserve amounted to £210,000. The Bank has an authorised note issue limited to the amount of the paid-up capital, and the actual circulation at the date of the last balance sheet amounted to £212,622, as compared with £240,300 at September 30, 1913. At this date the acceptances were exceptionally large, totalling £325,697, but by September 30, 1914, they had fallen to £103,450. Deposits amounted to £4,995,330, as compared with £5,399,604. On the other side of the accounts, the cash totalled £1,265,181, as compared with £1,220,423, the proportion to the total assets rising from 18.4 per cent to 20.5 per cent. The Bank makes a practice of keeping a fairly large proportion of its assets in coin, notes, cash in hand, at call, and at short notice. It has usually been its plan to use its money fully in South Africa, and, consequently, the state of the London Money market does not affect it so much as it does a purely London bank; but the contraction of business in South Africa and the shortage of bills, and especially the diamond trade bills, have caused the cash to mount up in London. The various measures taken by the Imperial Government to deal with the financial crisis in London have opened up a field for the employment to some extent of the unemployed funds of the Bank, and, although the rate of return is not what is usually looked for in a South African bank, nevertheless it is all to the good to be able to employ funds which otherwise might have to lie idle. The directors have, therefore, supported the issues of Treasury bills and also the War Loan. The bills purchased have fallen from £1,286,580 to £1,183,781; bills discounted and advances also have fallen from £2,921,469 to £2,718,402. We set out below a summary of the liabilities and assets for various years since 1895.

The accounts of the African Banking Corporation, Limited, for the twelve months to September 30, 1914, reflected to some extent the effects of the labour crisis in South Africa, which for the time being paralysed trade and affected profits. The action of the Union Government in dealing with the crisis led to the hope that local troubles were over, and there were indications in every direction that the business of the Bank could be further extended, and so in February 1914 it was decided to make a further issue of 40,000 shares of £10 each, ranking *pari passu* with the existing shares, bringing the paid-up capital up to £600,000. Naturally it takes time to make full use of new capital, and there was not the necessary time to employ the new capital satisfactorily before the European war broke out, and that severely affected operations for the last two months of the financial year. The profits for the year were adversely affected in yet another direction, and the Bank felt most severely of all the depreciation that occurred in its securities, which had been written down the previous year to what were considered bed-rock prices. In consequence of the War, however, prices fell still further, and in making up the balance sheet a further heavy depreciation had to be faced. Thus, in spite of the fact that the Bank had the use of £200,000 of new capital for a considerable part of the year, it is not surprising to find that the profits for the twelve months to September 30, 1914, showed a reduction as compared with those of the previous year; they amount to £197,179, as compared with £211,385. The expenses, on the other hand, rose from £147,024 to £150,751, an increase of £3,727, mainly caused by increases in salaries, which have been made in the usual way. The result is that the net profits fell from £64,361 to £46,428, a fairly heavy shrinkage. The directors decided upon a cautious

policy in dealing with the net profits, inasmuch as it was impossible to foretell what the effects of the War will be upon the current year's profits, and therefore it was decided to reduce the dividend from 8 per cent. to 6 per cent., the lower rate requiring an additional £4,000 owing to the increase in capital. The carry-forward was increased from £21,194 to £27,477. We set out herewith the profits made by the Corporation for each year since 1904:—

Profits of the African Banking Corporation, Limited.

Year ended Sept. 30	Gross Profits.	Salaries and other Expenses.	Net Profits.	Dividend. Amount.	Dividend. %	Reserve, &c.	Carried Forward.

* Includes income tax.

The proportion that the net profit bears to the paid-up capital is 7.7 per cent., as compared with 15.1 per cent. twelve months previously, to the capital and reserve combined the proportion is 5.7 per cent., and to the total working resources .7 per cent.

At the annual general meeting of the Corporation in January last, the Earl of Selborne said that it was impossible to make any useful forecast as to the future. "So far as the financial position is concerned, the able and prompt steps taken by the Home Government and the Union Government as regards South Africa are a guarantee that there will be no breakdown in that respect, but while the War lasts trade will be very much affected. The fact that large bodies of men are taken from the productive industries of the countries involved must have a great effect upon the economical situation. The fact that vast military supplies are required is not a compensation, but only a temporary alleviation." Since the meeting was held, of course, the occupation of German colonies in South Africa has taken place, and it may be anticipated with confidence that the occupation of these large tracts of territory will ultimately result in an extension of trade and business generally, in which the South African Banking Corporation, Limited, will doubtless fully share.

NOTE.—*Except where specified the "£" is the £ sterling. £E.975 are equal to £1,000 sterling.*

THE Agricultural Bank of Egypt was founded under Khedivial Decree of May 17, 1902, with the object of lending to small cultivators on the security of their land and of enabling them to obtain credit on reasonable terms. The duration of the Company was fixed at 50 years, to run from June 1, 1902, and the statutes provided, *inter alia*, that "the Company's sole object shall be to make advances to small farmers on the following conditions: (1) Advances not exceeding the sum of £E.300, and repayable within 10½ years. These advances shall be secured by a first mortgage upon land, the value of which must be at least double the amount of the advance; (2) advances not exceeding the sum of £E.20, and repayable in fifteen months, or less." It was further provided that the rate of interest to be charged must not exceed 9 per cent. per annum, and in no case the maximum rate of interest established by law. Subsequently the maximum of the (1) or "B" loans was raised to £E.500 and the maximum period of repayment to 20½ years, while the maximum rate of interest chargeable was reduced to 8 per cent. By a subvention of the Egyptian Government a net profit of 3 per cent. annually is assured for the capital employed in such loans during the 50 years of the Bank's existence. The Bank has proved a great success, and by its results has shown that it has filled a badly felt want; but at the beginning of 1913 a new law came into force providing that no owner of five feddans or less could have his land seized for debt contracted, and, consequently, he cannot borrow on the security of his land; and as over 75 per cent. of the Bank's clients come within the category named, it will be seen that its operations would be seriously

London Bankers:

CAPITAL & COUNTIES BANK, LIMITED.
LONDON & SOUTH WESTERN BANK, LIMITED.
PARR'S BANK, LIMITED.

The Bank is incorporated by special charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, being under the special supervision of the Government.

The Bank transacts General Banking and Foreign Exchange Business, undertakes Trust Business and acts as Business agents for other Banks.

Special facilities are available for Exchange Business on Japan, Formosa, China, the Straits Settlements, and Java.

affected. As a result of negotiations which took place the Government made certain concessions, which, it is hoped, will prove of material assistance. It appears probable that to carry out and complete the policy initiated by the Five Feddans Law it will be necessary to create new systems of agricultural credit to take the place of that which the Government has decided to restrict; and if the services of a financial establishment are required for this purpose the special claims of the Agricultural Bank will be recognised. Further, the Government agreed to give an extended scope to the operations of the Bank by increasing, subject to certain conditions, the limits of the advances which may be given under the Government guarantee, so that the maximum of "A" loans will be increased from £E.20 to £E.200, and the "B" loans from £E.500 to £E.1,000. Beyond this the Government agreed to modifications whereby the Bank would be able to invest its surplus funds in loans on the first mortgage of land in Egypt. As a result of this the Agricultural Bank purchased 194,621 Ordinary shares of the Mortgage Company of Egypt. This Company has a capital of £1,750,000 Debentures, £1,000,000 fully-paid Preferred shares, and 200,000 Ordinary shares of £5 each, on which £1 5*s.* was paid up. Of late, however, the full development of its business had been hampered by the difficulty of obtaining money on satisfactory terms. And as the Agricultural Bank was faced with the difficulty of obtaining a satisfactory outlet for its surplus funds, it was evident that the acquisition of the business of the Mortgage Company by the Agricultural Bank would be of benefit to both institutions.

Owing to the very low Nile flood of 1913, which failed to overflow much of the land which is usually cultivated, large areas of land remained unsown after the subsidence of the flood water, and many of the Bank's clients were unable to pay their taxes or the Bank's instalments. It is the practice of the Egyptian Government in such circumstances to remit taxes where desirable, and, similarly, large arrears in the Bank's collections were to be expected in those districts where annual cultivation had largely failed. The increase in arrears, however, in the annual collections throughout the country is exceptionally large, and is chiefly caused by the War. The cotton crop was deficient in quantity as compared to expectation, the prices were very low owing to the absence of the usual demand for export, and the fellaheen were more than ever indisposed to pay their debts from what sums they had available, owing to the disturbing influence of the War and the general restriction of credit. The result is that it has been necessary to draw on the general reserve and from the Egyptian Government to a total of £E.484,352 in order to comply with the statutes of the Bank, which rigidly fixes the method by which the annual profits are to be calculated. The following accounts show how the amount is arrived at:—

	£E.		£E.
General expenses and loans and instalments in arrears	675,471	Interest on loans and arrears of loans encashed ...	387,908
3% net profit on the capital engaged in guaranteed loans	196,789	Balance due from general reserve and Egyptian Government	484,352
	872,260		872,260

The net result is that the amount available for dividend on the Ordinary shares is only £E.53,601, as compared with £E.166,425 for the previous year; and, consequently, it is only possible to pay a dividend of 2 per cent., as compared with 6 per cent. for the twelve months ended January 31, 1914. Similarly the Deferred dividend has dropped from 400 per cent. to 50 per cent.

In the following statement we set out the profits made by the Bank since its inception:—

* 13 months to Jan. 31. † Year ended Dec. 31. (*a*) Includes £E.472,700 transferred from general reserve fund and £E.11,652 received from Egyptian Government under guarantee.

The proportion that the shown net profit for the past year bears to the paid-up share capital is 4.1 per cent.; to capital and reserve combined 2.9 per cent.; and to the total working resources, 1.3 per cent.

The figures of the balance sheet at January 31, 1915, did not show much change as compared with those of the previous year, with the exception of the large increase that has taken place in the instalments overdue, these amounting at January 31 last to £E.1,531,465, as compared with £E.804,783. Herewith we set out the liabilities and assets since the formation of the Bank.

ALLAHABAD BANK, LIMITED.

Head Office: Allahabad.

Capital—

Authorised ... ... Rs. 40,00,000

Paid up, 15,000 Ord. Shares of Rs. 100 each / 15,000 Pref. Shares of Rs. 100 each } 30,00,000

Price of Pref. Share, Rs. 110½. *Dividend*, 6%. *Yield*, £5 10*s.* 1*d.*
Price of Ord. Share, Rs. 300. *Dividend*, 18%. *Yield*, £6 1*s.* 10*d.*

At the end of 1913 India was passing through a severe banking crisis, accompanied by the failure of many banks and mercantile firms. The result was that people had their confidence shaken, and the trade of the country was adversely affected by the restriction of credit and general uneasiness. By the time war broke out conditions had become almost normal again, and trade generally had resumed its ordinary course. The War came unexpectedly, however, and affected the whole country, dislocating trade and finance, and disturbing the minds of many investors, more particularly Indian depositors. So abnormal was the state of affairs that withdrawal of deposits took place even from the Post Office Savings Bank, and much money that might have been profitably used in the trade of the country has been hoarded, the hoarding being especially prevalent in Allahabad. Nevertheless, the business of the Allahabad Bank, Limited, did not suffer much, and for 1914 its profits were very little less than those for 1913, the net profits amounting to Rs. 5,25,034, as compared with Rs. 5,72,795. Up to the end of 1913

the Bank showed its gross profit, the amount of interest paid to customers, and the expenses, but for 1914 the accounts were drawn up under the provisions of the new Indian Companies Act, and details as to the gross profit and expenses are no longer published. Though the capital has been increased, the Bank is able to maintain the same rate of dividend that has prevailed since 1908, and an addition of Rs. 2,00,000 has been made to the reserve fund, bringing it up to Rs. 45,00,000. Herewith we set out details of the profits for each year since 1907:—

Profits of the Allahabad Bank, Limited.

Year ended Dec. 31	Gross Profit. Rs.	Interest Paid to Customers. Rs.	Expenses. Rs.	Net Profits. Rs.	Dividends. Pref. Rs.	%	Ord. Rs.	%	Reserve Depreciation, &c Rs.
1914...	—	—	—	5,25,034	90,000	6	2,10,000	18	2,30,000

1911...	39,06,548	28,24,283	5,98,276	4,83,989	60,000	6	1,80,000	18	2,40,000
1910...	31,17,829	21,14,065	5,61,810	4,41,954	60,000	6	1,80,000	18	2,20,000
1909...	28,21,544	18,47,675	5,16,519	4,57,350	60,000	6	1,80,000	18	2,00,000
1908...	28,27,767	17,30,344	4,60,805	6,36,618	60,000	6	1,80,000	18	3,40,000
1907...	26,86,613	17,74,868	4,07,247	5,04,498	60,000	6	1,57,500	17½	2,40,000

The proportion that the shown net profit bears to the paid-up capital is 17.5 per cent., to capital and reserve combined 7.0 per cent., and to the total working resources .9 per cent.

The Allahabad Bank was started in the year 1865 with a paid-up capital of Rs. 1,90,830, which was increased to Rs. 3,00,000 by 1870. In 1890 it rose to Rs. 4,00,000; by 1900 to Rs. 5,00,000; in 1901 to Rs. 10,00,000; in 1904 to Rs. 15,00,000; and in 1907 to Rs. 20,00,000, at which figure it remained until the end of 1912. An issue of Rs. 5,00,000 in Preference shares was made in February 1913, bringing the capital to Rs. 25,00,000.

A further issue of Rs. 5,00,000 of new Ordinary capital was made in September 1914, thus raising the paid-up capital to Rs. 30,00,000. The issue was largely over-subscribed, although offered at a premium of 100 per cent., and the premium of Rs. 5,00,000 on the issue has been added to the reserve fund, which is invested in Government paper. Thus, with a paid-up capital of Rs. 30,00,000, the reserve fund, amounting to Rs. 45,00,000, is 50 per cent. larger. The result is that the proportion of the capital and reserve to the total liabilities has risen from 8.4 per cent. at the end of 1913 to 12.4 per cent. at the end of 1914. On the other hand, the deposit and current accounts have fallen from Rs. 6,76,57,075 to Rs. 5,21,63,789, the proportion to the total liabilities falling from 90.7 per cent. to 86.4 per cent. On the other side, cash, loans and discounts show shrinkages, the cash falling from Rs. 1,24,64,835 to Rs. 82,46,408, the proportion to the total assets dropping from 16.7 per cent. to 13.7 per cent.; the loans falling from Rs. 2,46,91,648 to Rs. 1,81,47,085, and the discounts from Rs. 1,35,77,121 to Rs. 88,17,244, the proportion in the case of the loans falling from 33.1 per cent. to 30.1 per cent., and in the discounts from 18.2 per cent. to 14.6 per cent. On the other hand, the investments rose from Rs. 50,71,951 to Rs. 60,24,317, the proportion to the total assets rising from 6.8 per cent. to 9.9 per cent. The Bank does not accept unwieldy deposits, and it was pointed out that at the beginning of 1915 it had no deposit from any single depositor exceeding Rs. 3,00,000. Herewith we set out the liabilities and assets of the Bank for various years since formation. Though the Bank was started in 1865, it was not until 1888 that its first branch was opened, this being at Cawnpore. At the present time it has, in addition to the head office, 12 branches and six sub-agencies.

ANGLO-EGYPTIAN BANK, LIMITED.

Head Office: 27 Clement's Lane, Lombard St., E.C.

Capital—

Authorised	£1,500,000
Subscribed, 100,000 Shares of £15 each	1,500,000
Paid up, £5 per Share	500,000

Price of Share, £9⅛. *Dividend*, 15%. *Yield*, £8 2*s.* 5*d.*

THE Anglo-Egyptian Bank, Limited, celebrated its jubilee at the end of last year, and in the circumstances it is certainly satisfactory to find that the directors were able to maintain the dividend of 15 per cent. that has now prevailed each year since 1906. Speaking at the meeting in November last, the Chairman pointed out that there had been several crises in Egypt during the past few years, but, except in frightening away foreign capital, they had not greatly affected the intrinsic wealth of the country nor its revenues. Dependent as Egypt was on the sale of its cotton crop, both for revenue and for the welfare of its people, it had now been badly hit, the cotton industry suffering at

the beginning of the War more than any other. As the Bank's financial year ends on August 31, it will be seen that the last accounts only embrace a period of one month under war conditions, and the gross profit at £189,619 is very little different from that reported for the previous year, which amounted to £188,453; but as the expenses rose from £80,426 to £87,028 the net profit fell from £108,027 to £102,591. The dividend of 15 per cent. calls for a sum of £75,000, and after setting aside £2,591 to the staff benevolent fund the balance forward was increased from £52,000 to £77,000. No advantage was taken of the moratorium in Egypt, neither was there any moratorium in Gibraltar, but in Malta large demands for Admiralty requirements soon drained the cash on the spot. A consignment of £80,000 which was on the way was held up, and could not proceed beyond Gibraltar, so that it was necessary to take advantage of the moratorium; but by the time of the meeting the moratorium had been removed and business was going on as usual. Herewith we set out the profits made by the Bank for each year since 1904:—

Profits of the Anglo-Egyptian Bank, Limited.

Year ended Aug. 31	Gross Profit. £	Expenses. £	Net Profit. £	Dividend Amount. £	Dividend Rate. %	Reserve, Invest., Deprn., &c. £	Carried Forward. £

1904 ...	146,330	46,899	99,431	50,000	12½	51,431	15,000

The proportion that the shown net profit bears to the paid-up capital is 20.5 per cent.; to capital and reserve combined 8.7 per cent.; and to the total working resources, amounting to £5,461,757, 1.9 per cent.

The Anglo-Egyptian Banking Company, Limited, was formed in July 1864, and began operations on September 1 of that year. The first accounts were provisionally made up to February 28, 1865. The Bank was formed with a capital of £2,000,000, of which £500,000 was paid up; but in the following year the paid-up amount was increased to £800,000. Business continued to progress on the whole, and in 1871 it was announced that, in consequence of the vast and rapid increase of the commerce of Egypt and the extension of agriculture in that country, new sources for the profitable employment of capital had been opened up, so that the board had arrived at the conclusion that it was necessary to increase the capital. It was therefore decided to double it by the issue of 40,000 shares of £20 each at £5 premium per share. Only half the number of shares were immediately issued, and it was not until the end of 1872 that the balance was placed; thereby the paid-up amount was increased to £1,600,000.

An interesting little paragraph occurs in the report for the half-year ending August 31, 1880, where it states "the Bank's shares in the great Syndicate of Paris has been closed by the sale of the Suez Canal shares, which realised £224,000; and by taking over the Unified stock which formed the remainder of the security at market price of the day there resulted a profit of £92,758 6*s.* 7*d.*" The Bank had claims on the Egyptian Government amounting to about £300,000. These were settled in 1880 by the payment of 30 per cent. in cash and the balance in bonds and Five per Cent. Preference stock at par; and it was added: "Henceforward Egypt will no doubt experience the advantage of the recent honourable adjustment of her pecuniary liabilities in the contentment of her population and in the increase of her commercial prosperity."

The next change in the affairs of the Bank occurred in 1887, when it was reconstructed under its present title on a basis to admit of a return of capital. A sum of £10 per share was returned to the shareholders, thereby reducing the paid-up capital to £800,000; while in 1889 it was decided to return a further £400,000, or £5 per share, the report stating that the desirability of the operation must be evident from the accounts, "which show nearly £500,000 sterling lying in London at unremunerative rates," a position which it appeared to the board must constantly recur so long as the paid-up capital remained at the old figure. Accordingly, the accounts for 1890 showed that the paid-up capital had been reduced to £400,000, the subscribed amount being £1,200,000. The capital remained at this figure until 1904, when 20,000 additional shares were created, bringing the authorised amount to £1,500,000 and the paid-up sum to

£500,000, since when no further alteration has occurred.

In 1895 there was no reserve fund, but since that time substantial allocations have been made, and by 1905 the reserve was equal to the paid-up capital. By August 1913 it reached a total of £680,000, and though it was possible to increase the fund at August 31 last, as already pointed out, it was preferred to increase the carry-forward, and, consequently, the reserve fund still stands at £680,000, or £180,000 in excess of the paid-up capital. From the table herewith the growth of the institution as evidenced in the liabilities and assets for various years since formation may be seen.

In addition to the head office in London the Bank has branches at Alexandria, Cairo, Beni-Souef, Mansourah, Port Said, Tantah, Khartoum, Zagazig, Malta, Gibraltar, and Paris.

The low price of cotton which resulted from the outbreak of war adversely affected the country for a time, but large expenditures in connecton with the large number of British troops in the country and the great recovery in the price of cotton have brought renewed prosperity. On December 18, 1914, a British protectorate over Egypt was declared, and the country will now gain all the advantages which accrue to nations within the British Empire.

THIS Bank forms a very good example of a transformation little short of remarkable of a purely local institution into one of international importance. It is of comparatively recent origin, dating back only to 1888, when it was formed as the Bank of Tarapacá and London as a direct outcome of the great attention then being devoted to the nitrate industry, and the purpose of its founders was the establishment of a bank which should act for that industry. Such were the auspices under which the new Bank was started, and for some time it was purely as a nitrate Bank that it was carried on. Three branches were originally opened: one at Valparaiso, one at Iquique, and the third at Pisagua. The capital was fixed at £1,000,000, of which £500,000 was paid up. During the earlier part of its career, in consequence of its limitations, the business was confined in somewhat narrow channels, and the Bank suffered also by reason of internal political troubles in Chile. In 1895 steps were taken to enlarge its territory beyond the immediate boundaries of the nitrate fields, and branches were opened at Santiago and Punta Arenas, which were followed later on by offices at Antofagasta, Concepcion, and Puerto Gallegos. Though the territory was somewhat enlarged, the business was still confined to Chile, and it was not until 1900 that the first step in the transformation of the Bank was taken. It was decided in that year to absorb the Anglo-Argentine Bank, the consolidated institution taking the title of the Bank of Tarapacá and Argentina. The Argentine Bank had offices at Buenos Ayres and Montevideo, and in order to carry out the amalgamation an enlarged capital was necessary. Consequently, the authorised amount was increased to £1,500,000 and the paid-up amount to £750,000. In the same year five new branches were opened up. In 1907 the title of the Bank was changed to its present form, namely, the Anglo-South American Bank, Limited, and it was at the same time decided to further increase the capital to an authorised amount of £2,500,000, of which £1,250,000 was paid up. At this time a total of 16 branches had been opened in South America, while, in addition, an agency was opened in New York and a branch was also started at Hamburg. In 1912 another very important step forward was taken when it was decided to acquire the business of the London Bank of Mexico and South America, Limited, this giving the institution a footing in Central America and the northern countries of the west coast of South America. The London Bank of Mexico and South America was largely a holding institution, having an interest in local banks, including Banco del Peru y Londres, Banco de la Provincia de Buenos Aires, Banco de la Nacion Boliviana, Banco Agricola y Comercial, and the Banco de Londres y Mexico. The result of this last step is that, in addition to the head office in London, an agency in New York, and branches in Paris and Hamburg, the Bank has 10 branches in Chile, seven branches in Argentina and Uruguay, and an agency in Bolivia, while it also has agencies in Mexico, Peru, Havana, Salvador, and in the principal towns in Brazil, Costa Rica, Ecuador,

* Preliminary expenses, 1890, 1889, £4,372.

† Including bills receivable and cash and securities lodged with the Chilian Government for due payment of drafts issued for duties.

Guatemala, Guiana, Honduras, Nicaragua, Panama, Paraguay, United States of Colombia, Venezuela, and the West Indies. In order to carry out the amalgamation it was necessary to increase the capital again, and accordingly it was decided that the authorised capital should consist of 500,000 shares of £10 each. Of these, 450,000 shares have been issued, and £5 per share has been called up, making a total issued capital of £2,250,000. With practically only one exception the business has shown uninterrupted progress from the start. Up to 1907 a very steady growth occurred, but for the year to June 30, 1908, a slight set-back was experienced, due to a severe political and financial crisis in Chile, which resulted in a considerable shrinkage in business. Since then, however, progress has been uninterrupted year by year, and by June 30, 1912, the total assets of the Bank were once more in excess of those at June 30, 1907, which had hitherto been the high-water mark as regards the extent of the business. The figures at June 30, 1913, are not comparable with those of the previous year, inasmuch as they are swollen by the figures of the London Bank of Mexico and South America.

The general disturbance to business caused by the War is reflected in the figures of the accounts to June 30 last. The capital and reserve funds are unchanged, but bills payable have been reduced from £5,169,486 to £3,501,842, while acceptances have dropped from £2,791,670 to £1,461,756. On the other hand, the deposits have risen from £7,830,631 to £7,973,527. On the other side of the accounts, the cash has risen from £1,736,001 to £2,291,943, the proportion to the total assets rising from 8.8 per cent. to 13.5 per cent. Investments also are higher, amounting to £1,843,972, as compared with £1,636,671. Bills receivable, however, have dropped from £5,551,758 to £3,956,009. Advances amount to £7,131,276, as compared with £7,803,366. Herewith we set out a statement of the liabilities and assets of the Bank for various years from 1889.

Naturally, the dislocation of trade is reflected in the profits, but it is satisfactory to find that the fall that has occurred is comparatively small. The gross profit has fallen from £546,314 to £526,028, but this has been offset by a fall in expenses from £251,352 to £228,451. Income tax, however, has risen from £15,907 to £28,291, and the net profit, therefore, works out at £269,286, as compared with £279,055. The dividend has been reduced from 10 per cent. to 8 per cent., and a sum of £75,000 has been set aside to writing down the investments, while the Bank carries forward £133,887, as compared with £110,164 brought in. Herewith we set out the profit record since 1904:—

For 1914 the Australian Bank of Commerce showed a profit of £119,988, as compared with £124,416 for 1913. After deduction of interest on Inscribed Deposits the net profit reached £54,239, as compared with £57,120. The dividend was maintained at 3 per cent., and a sum of £20,000 was carried to the reserve fund. Particulars of the profits for each year from 1904 are appended:—

* Six months to June 30.

† Previous to 1910 the profits of the Australian Joint Stock Bank are given, this Bank having been reconstructed in 1909 and name changed to Australian Bank of Commerce, Ltd.

The proportion that the shown net profit for 1914 bears to the paid-up capital is 4.6 per cent., to capital and reserve 4.3 per cent., and to the total working resources 0.9 per cent.

This Bank was incorporated under the New South Wales Companies Act in September 1909, and is the successor of the old Australian Joint Stock Bank, Limited, which dates back to 1853. The Australian Joint Stock Bank, Limited, was formed with a capital of £250,000, and the first balance sheet, dated June 30, 1853, showed that the paid-up capital amounted to £125,000, the deposits being £159,048. By 1874 the paid-up capital was £484,656, and it was then increased to £500,000, at which figure it remained until 1888. The Bank suspended payment in 1893, and was then reorganised. But as stated a subsequent reorganisation occurred, and on January 1, 1910, the Bank started business as the Australian Bank of Commerce, Limited. The amount of capital paid up at the end of 1910 was £1,145,933. At the present time the authorised capital is £2,000,000, in £1 shares. There have been issued 1,198,534 shares.

In consequence of the passing of the Federal Notes Act and the subsequent issue of Commonwealth notes, the circulation of the Australian joint-stock banks has been withdrawn, inasmuch as a prohibitive tax is now placed on their issue.

The reserve fund now amounts to £55,000, which has been accumulated in the last three years. The changes in the balance sheet at the end of 1914, as compared with the previous year, are of quite a minor character. The cash in London has fallen from £376,049 to £173,913, while bills discounted and advances have risen from £3,929,038 to £4,088,361. Investments have also risen from £75,500 to £104,745. The totals of the balance sheet amount to £6,165,853, as compared with £6,148,671. Herewith we set out the liabilities and assets of the old Australian Joint Stock Bank, Limited, from 1905 to 1909, and the corresponding figures of the Australian Bank of Commerce from 1910 to 1914.

In the first months of war the position in Australia was adversely affected by the greatly reduced quantity of wool exported. Up to the end of December 1914 only about 125,000 bales of the new clip had been sold in the Sydney market, whereas in the same period in the previous year about 525,000 bales were sold; and the price realised showed heavy decline, the price of Port Philip average grease in the London market having fallen from 13½*d.* at the end of July to 10½*d.* at the end of December 1914. In the current year, however, this situation has been completely rectified. The exports of wool from Australia have been greater than ever before, and the prices realised have steadily risen, until at the present time the quotation of Port Philip average grease is as high as 14¼*d.*; that is to say, it has more than recovered the fall that took place in the early months of the War. The value of wool imported into Great Britain from Australia in the first nine months of the current year has been £16,820,000, against £8,773,000 in the corresponding nine months of last year, and it is evident that the year 1915 will be a favourable year for business in Australia. Indeed, money has accumulated there so quickly that the Commonwealth Government in August succeeded in issuing at home its first loan of £5,000,000 for war purposes, part of a total loan of £20,000,000 to be issued in instalments. The interest on the loan was 4½ per cent. and the price of issue was par. The applications amounted to upwards of £13,000,000.

The balance-sheet figures for June 30, 1915, show comparatively little change as compared with the previous year, the main item being an increase of £42,205 in the deposits, which amount to £3,331,321, as compared with £3,289,116 at June 30, 1914; while, on the other hand, the inscribed deposits fell from £1,653,399 to £1,614,689. On the other side of the accounts the cash in hand has risen from £867,025 to £1,068,331, while call money has dropped from £470,942 to £316,796; bills discounted, loans and advances have also fallen, amounting to £3,995,588, as compared with £4,105,774.

BANK OF ADELAIDE.

Head Office: Adelaide, South Australia.
London Office: 11 Leadenhall Street, E.C.

Capital—

Authorised, 125,000 Shares of £5 each	£625,000
Subscribed	625,000
Paid up, £4 per Share	500,000

Price of Share, £6½. *Dividend*, 8 %. *Yield*, £5 4*s.* 6*d.* %

During the twelve months to March 1915 the Bank of Adelaide has suffered from two circumstances, war and drought. The Chairman of the Bank of Adelaide, in referring to the drought, stated that it "has deprived us of some millions of pounds worth of one of our principal staples of export—viz., wheat—and war has closed the outlet avenue for our metal productions in regard to our chief customer—Germany—both bringing about a serious dislocation of exchange, which is one of our chief sources of profit. In the earlier days of the War this effect was very marked, and the exchange operations of our customers were only carried on at a considerable loss to the Bank. Fortunately we were able to find cover for our transactions, though not at a profit. The situation has been considerably relieved by the unexpected demand which arose for another of our staples—wool—which has found a market at satisfactory prices; also by shipment of metals, which have been taken by countries other than our enemies. Considerable alleviation has also been experienced in aid from the Mother Country by her loans to our Federal Government, thus providing cover in cash previously supplied by our exports of merchandise. It must be borne in mind, however, that this latter assistance is merely borrowed, and must be repaid when hostilities cease. Our country, fortunately, possesses such wonderful recuperative powers that such a burden does not weigh heavily on us." In the circumstances it is not surprising that the net profit for the twelve months to March 1914 shows a considerable shrinkage as compared with the previous year; and, indeed, a marked shrinkage has occurred in business, brought about chiefly by the state of financial matters in London, which rendered it unprofitable to continue the large transactions which the Bank entered into with various Australian Governments. Though the Bank has not encouraged advances for speculative purposes, it has been able to afford all necessary assistance to its customers, and has made ample provision to carry farmers, whose business is of great value, through the coming reason. The net profit amounted to £52,485, as compared with £76,227. After providing for land and income tax there is a balance of £48,023, as compared with £71,946. For the five years up to 1914 the Bank was able to pay a dividend of 10 per cent. per annum. In consequence of the reduction in profit it was considered prudent to reduce the dividend from 10 per cent. to

1906 ...	48,810	2,524	46,286	32,000	8	15,000	18,239
1905 ...	50,441	3,565	47,876	32,000	8	15,000	18,953

The proportion that the shown net profit bears to the paid-up capital is 10.5 per cent., to capital and reserve combined 5.2 per cent., and to total working resources 1.1 per cent.

The authorised capital of the Bank of Adelaide, an institution which was incorporated in 1865, is £625,000, in 125,000 shares of £5 each. The Bank, however, has power to increase the capital to £1,000,000. The paid-up capital is £500,000, the £5 shares being £4 paid. There is also £6 per share uncalled liability. For many years the capital remained unchanged, but in July 1910 a further issue of capital was made. It consisted of 25,000 new shares, which were taken up by the shareholders at £6 per share. The premium of £2 per share, making £50,000, was added to reserve, bringing it up to £400,000.

Since that date further additions have been made from profits to reserve fund, and with £20,000 from the profits of the year ended March 31, 1914, the reserve was brought up to £510,000, or £10,000 in excess of the paid-up capital. At the end of 1911 the notes in circulation amounted to £228,477, but in consequence of new legislation establishing a Federal note issue, and the consequent prohibitive tax placed on other note issues, this item has practically disappeared from the accounts. Bills in circulation fell from £265,711 in 1914 to £208,240 in 1915. Similarly, the deposits dropped during the year from £4,889,340 to £3,548,223. On the other hand, the cash rose from £872,062 to £946,605, the proportion to the total assets rising from 14 per cent. to 19.5 per cent. Bills receivable and advances have dropped from £4,015,067 to £2,589,386, the proportion to the total assets falling from 64.4 per cent. to 53.6 per cent. The 1914 figures were exceptionally large, an increase of £264,000 occurring in the advances, due chiefly to the cost of moving the crops. But as this year there were no crops to move, save that required for home consumption, the shrinkage is explained.

We set out herewith the liabilities and assets for various years since 1867.

It may be recalled that the Bank of Adelaide are bankers in London to the South Australian Government, and it should be noted that it came unscathed through the financial troubles of 1893.

BANK OF AUSTRALASIA.

Head Office: 4 Threadneedle Street, London, E.C.

Capital—

Authorised, Subscribed and Paid up, 50,000 Shares of £40 each, fully paid £2,000,000

Price of £40 Share, £110xd. *Div.,* 17%. *Yield,* £6 3s. 10d.%

For the twelve months to October 1914 the Bank of Australasia made a gross profit of £836,550, as compared with £788,605 for the preceding year. In view of the fact that three months of the period were affected by war conditions it will be seen that the results are extremely satisfactory. The increased gross profit was accompanied by a rise in expenses, salaries, &c., working expenses rising from £299,818 to £307,622, and rates and taxes from £61,167 to £74,521. The net profits thus amounted to £454,407, as compared with £427,620. The dividend was maintained at 17 per cent., but, in consequence of an increase of capital in 1913, the amount required for the dividend is now £340,000, as compared with £306,000 for the previous year; a sum of £20,000 has been transferred to the reserve fund, and £10,000

The proportion of the shown net profit for the twelve months to October 1914 to the paid-up capital is 22.7 per cent., to capital and reserve fund combined 9.7 per cent., and to the total working resources 1.7 per cent.

The Bank of Australasia is incorporated by Royal Charter, and it was in 1832 that the first steps were taken to obtain the charter from the Treasury. The promoters intended to cover a much larger field than the Bank has actually occupied, and the title suggested was that of the Royal Bank of Australia and South Africa. But consent was only given to the charter covering the continent of Australasia, and the title was accordingly modified, the prospectus showing the final title to be the Bank of Australasia. The capital was £200,000, and the prospectus pointed out that the Company was formed for the purpose of establishing banks of issue and deposit in New South Wales, Van Diemen's Land, and other settlements of Australasia. By the charter the responsibility of the shareholders was limited to double the amount of their shares. The charter required that one-half of the Company's capital should be paid up before the commencement of business, and that the entire capital should be paid up within two years. As a matter of fact it was not until April 1835 that the Royal Charter was actually secured, and, as already pointed out, its powers were limited to Australasia. The first office in Australasia was opened at Sydney in December 1835. In 1839 the capital was increased to £400,000, in 1841 to £600,000, and in 1843 to £900,000, at which amount it remained until 1863, when it rose to £975,000. By 1865 it had risen to £1,200,000, at which figure it remained until 1882, when it rose to £1,600,000, no further alteration occurring until 1913. The original idea was to employ British capital in the development of commerce in Australia, and, consequently, the deposits during the earlier years were comparatively small in proportion to the capital. It is, of course, from the time of the gold discoveries that the business has shown rapid expansion. In 1851 the deposits were only £707,000, but at the end of 1852 they increased to £2,200,000, and twelve months later to £4,000,000. From that date until 1876, however, they remained comparatively stationary, and in 1880 were still only £5,800,000. During the eighties Australasia made great progress, and in 1890 they reached a total of £13,657,000. During the financial and drought troubles which visited Australia in the nineties no progress was made, and in 1900 the deposits were still £13,650,000. Since then the country and the Bank have resumed their progress, and in October 1914 the deposits reached a total of £19,108,792. In 1851 the notes in circulation were only £149,000, but two years after they had risen to £1,128,000. The circulation gradually fell, until in 1870 it was barely £300,000. Subsequently it rose again until in October 1910 it amounted to £564,886. In consequence, however, of the prohibitive tax that the Commonwealth Government have put upon the note issues of all private banks the Bank of Australasia has abandoned its note issue, and with it the portion of the coin reserve specially held against it has naturally disappeared. In October 1911 the circulation was £227,860; by October 1913 it fell to £168,818, recovering to £202,995 by October 1914. It may be added that the note issue continues in New Zealand.

We stated above that the paid-up capital remained unchanged at £1,600,000 from 1882 to 1913, but it was then agreed to increase the capital by £400,000 by the issue of 10,000 new shares of £40 each. As these are now fully paid the capital is £2,000,000. At October 12, 1914, the reserve fund amounted to £2,710,000, or no less than £710,000 in excess of the paid-up capital.

Naturally the crisis of 1893 affected the Bank, but on the whole it passed through the bad times with little untoward effect. True it is the profits fell off, though, indeed, not to a very large extent, and it was necessary to reduce the dividend; but the ground then lost has since been more than recovered, and for the past three

years the dividends have been larger than at any period of the Bank's history except for a period of five years during the later fifties. After the crisis, and the consequent depression, a few non-paying branches of the Bank were closed, but apart from these the number has steadily increased, and in October last the total number opened was 204. These now stand in the books at the low valuation of £14,288.

At the meeting in March the Chairman pointed out that the commerce of Australia and New Zealand naturally felt the effect of the War to a great extent. "For instance, for the eleven months ending November 30 last the imports had dropped from £71,640,000 to £68,751,000, and the exports from £67,908,000 to £59,840,000. The falling-off in the export of wool alone amounted to £5,927,000. This was largely owing to the Continental buyers being out of the market. Since then the wool-growers have been getting enhanced prices for their commodity, and reports of latest sales show further increase. There has been no grain exported since the beginning of the War. The shipment of meat has been taken in hand by the Government of the Commonwealth, but there is no reason to suppose that the prices paid to the growers have been otherwise than satisfactory. The production of gold has been falling-off for some time past. The Commonwealth Government called on the Australian banks for a large deposit of gold—£10,000,000 in all—against notes, which are, of course, legal tender. It seems to have been quickly realised by the business world in Australia that a Commonwealth note was something more than a 'scrap of paper,' and it is needless to say that the banks had no hesitation in falling in with the requirements of the Government."

The balance-sheet figures as at April 12, 1915, show substantial progress as compared with those twelve months previously. The capital has remained unchanged, but the reserve fund shows an increase of £60,000 at £2,750,000. The note circulation has risen from £195,887 to £258,793, while the deposits have gone up from £19,259,977 to £20,699,953. Bills payable also have risen from £3,045,714 to £3,159,819. On the other side of the accounts the cash shows a very large increase of £2,300,799, amounting to £7,137,665, as compared with £4,836,866, but call money had dropped from £2,390,600 to £620,000. British Government securities at £1,065,470 show an increase of £242,722. Bills receivable and advances have risen from £18,527,117 to £19,427,303.

We show herewith the progress made by the Bank as indicated by its accounts for various years since 1861.

BANK OF BENGAL.

Capital—

Authorised ... ... Rs. 2,00,00,000
Issued, 40,000 Shares of Rs 500 each ... 2,00,00,000
Price of Shares, Rs.1,675. *Dividend*, 16%. *Yield*, £4 15*s.* 5*d.*%

The Bank of Bengal, one of the three Presidency Banks, was originally established in 1809 with a capital of Rs. 50,00,000, of which Rs. 10,00,000 was contributed by the East India Company, though steps had been taken three years previously to bring about the formation of the institution. During this earlier period of its existence the Bank was entirely under Government control, a state of affairs which continued until 1862, when many of the restrictions which had hitherto prevailed as to the conduct of business were removed and the Bank took over the Government Treasury, while the privilege of a note issue which it had previously enjoyed was withdrawn. Though the Bank was not entirely under Government control, nevertheless it was not until 1876 that it became entirely free from Government participation in the management. In 1876 the Presidency Banks Act was passed, and while under the Act the Government may call for any information in regard to the affairs of the Bank which it may desire, all direct active control or interference has now ceased.

In addition to the head office there are three branches in Calcutta and 21 offices elsewhere, at Agra, Akyab, Allahabad, Benares, Cawnpore, Chittagong, Dacca, Delhi, Hyderabad, Jalpaiguri, Lahore, Lucknow, Moulmein, Nagpore, Naraingunge, Patna, Rangoon, Secunderabad, Simla, Chandpore, Serajgunge, together with an agency in Bombay.

While the directors have power to open branches anywhere within the Presidency of Bengal, no office or agency can be established outside the limits of the Presidency without the previous sanction of the Governor-General in Council. Moreover, the agency in Bombay, and any other agency that may at any future time be established in Madras, is prohibited from undertaking any business except purely as an agent of the Bank or of its branches. The Bank carries on all Government business, with the exception of that in connection with the note issue, for which the Government is entirely responsible, and the Savings Bank; it receives the revenue, including the receipts from guaranteed railways, and makes all disbursements, and undertakes the entire business connected with Government loans. Under the Act the Bank is prohibited from investing its funds, except in securities of the Government of India or of the United Kingdom, or in railway or municipal or other securities the interest on which is guaranteed by the Government of India, and from advancing money to customers, except on similar classes of securities or on bullion or other goods assigned to the Bank as security for such advances, or, with the express sanction of the local Government concerned, upon the security of estates managed by the Court of Wards. The borrowing powers of the Bank are confined to India, while the period for which any advance can be made is limited to six months.

The Indian note issue is controlled by a Government department, and the notes are secured on gold, silver, and Government debt.

The capital of the Bank of Bengal remained unchanged until 1856, when it was raised to Rs. 75,00,000; in 1862 it was further raised to Rs. 1,10,00,000, and in 1864 to Rs. 2,20,00,000; but under the provisions of the Bank Act of 1876, on the sale of the 2,200 shares held by the Government the capital was reduced to its present figure of Rs. 2,00,00,000. While no increase has occurred in the capital since 1876, steady additions have been made to the reserve, which now equals the paid-up capital at Rs. 2,00,00,000.

A consistently steady growth has occurred in the deposits. At June 30, 1900, they amounted to Rs. 8,43,49,530, by 1905 they had risen to Rs. 13,53,74,819, and year by year since that time growth has been witnessed. At June 30 last they had risen to Rs. 26,53,26,164. The cash at June 30 last amounted to Rs. 14,68,25,073, as compared with Rs. 13,51,10,181. A substantial increase has taken place in the total investments, which have risen from Rs. 2,77,03,248 to Rs. 5,96,11,545. The Bank reports a general feeling of nervousness and want of confidence, while with trade restricted and supplies of money ample difficulty has been experienced in finding profitable employment for its resources, and this presumably accounts, partially at any rate, for the large increase in the investments. Herewith we set out a summary of the liabilities and assets for various years since 1900.

The net profits for the twelve months to June 30 last have amounted to Rs. 34,27,629, as compared with Rs. 36,39,040. With the reserve brought up to an amount equal to that of the paid-up capital, the large allocations to this fund which have been made in the past are not now required, and accordingly, in spite of the decline in net profit, the dividend has been increased. For a number of years up to 1904 the dividend was maintained at the steady rate of 10 per cent. per annum. This was followed by payments of 12 per cent. per annum, the rate being increased to 14 per cent. in 1909, and maintained at this figure until last year, when the distribution was raised to 15 per cent. For the twelve months to June 30 last the distribution is 16 per cent. Details of the profits since 1906 are appended:—

Profits of the Bank of Bengal since 1906.

Year ended June 30	Gross Profit. Rs.	Salaries and other Expenses. Rs.	Net Profit. £	Dividend. Amount. Rs.	Dividend. Rate. %	Reserve, Invest., Depr'n., &c. Rs.	Carried Forward. Rs.
1915 ...	[illegible]	[illegible]	34,27,629	32,00,000	16	1,00,000	6,86,318
1914 ...	58,22,796	21,83,756	[illegible]	[illegible]	15	6,00,000	5,58,689
1913 ...	54,44,998	20,73,792	33,71,206	28,00,000	14	6,00,000	5,19,649
1912 ...	52,53,928	19,[illegible]	32,74,073	28,00,000	14	5,00,000	5,48,443
1911 ...	54,57,640	19,52,008	35,05,632	28,00,000	14	7,00,000	5,74,370
1910 ...	53,45,987	19,49,787	33,96,200	28,00,000	14	6,00,000	5,68,738
1909 ...	54,22,475	18,56,438	35,66,037	28,00,000	14	7,50,000	5,72,538
1908 ...	55,16,859	18,17,306	36,99,553	24,00,000	12	12,50,000	5,56,501
1907 ...	56,35,479	17,61,108	38,71,371	24,00,000	12	14,50,000	5,06,948
1906 ...	52,78,125	16,98,482	35,79,643	24,00,000	12	12,50,000	4,85,577

The proportion of the shown net profits for 1915 to the paid-up capital is 17.1 per cent., to the capital and reserve combined 8.5 per cent., and to the total working resources 1.1 per cent.

During July 1914 the trade demand for money in Bombay was extremely slack. Early in August, on the declaration of war against Germany, the Money market became demoralised, widespread distrust prevailed, and urgent demands for accommodation were experienced, forcing the Bank rate to 6 per cent. Excitement gradually abated, but general credit had not been restored at the end of the year. The average Bank rate for the six months was 5.28 per cent. During the six months from January to June 1915 trade was very dull, and the demand for accommodation was only moderate. In brief, the effect of the War upon India up to recently has been to cause depression; but matters are now improving, and with a good monsoon the outlook is favourable, especially with raw cotton at a high price again. The average Bank rate was 5.84 per cent. The gross profit of the Bank for the twelve months to June 30, 1915, amounted to Rs. 27,09,490, as compared with Rs. 25,16,132. The working expenses, however, also rose and reached a total of Rs. 10,04,905, as compared with Rs. 8,31,120. Consequently, the net profit amounted to Rs. 17,04,585, as compared with Rs. 16,85,012. It was thus possible to increase the dividend by 1 per cent., bringing the distribution up to 15 per cent. Herewith we set out the profit statement for each year since 1905:—

Profits of the Bank of Bombay.

Year ended June 30	Gross Profit. Rs.	Salaries and Other Expenses. Rs.	Net Profit. Rs.	Dividend. Amount. Rs.	Dividend. Rate. %	Reserve Invest., Deprn., &c. Rs.	Carried Forward. Rs.
1915 ...	27,09,490	10,04,905	17,04,585	15,00,000	15	75,000	5,56,835

The proportion that the shown net profit for the past year bears to the paid-up capital is 17.0 per cent.; to capital and reserve combined, 8.5 per cent.; and to the total working resources the proportion is 1.1 per cent.

The Bank of Bombay was formed under special charter, in 1840, with a capital of Rs. 52,25,000, of which Rs. 3,00,000 was subscribed by the Government. By 1864 the capital was raised to Rs. 2,09,00,000, but in 1867 the Bank was reconstructed and registered as a joint-stock company, with a capital of Rs. 1,00,00,000, under the title of the New Bank of Bombay, Limited. Under the Presidency Banks Act of 1876 the Bank was re-formed

with the same capital under its present title, and no further alteration in the capital has taken place. The head office of the Bank is at Bombay, and it has branches at Ahmedabad, Akola, Amraoti, Broach, Hyderabad (Sind), Indore, Jalgaon, Karachi, Poona, Rajkot, Sholapur, Sukkur, and Surat. Branches may be opened at any place within the Presidency, but no branch or agency can be established outside the limits of the Presidency without the previous sanction of the Governor-General in Council. Moreover, any agency of the Bank that may at any time be established in Calcutta or Madras is prohibited from undertaking any business except purely as agent of the Bank or of its branches. In 1874 there were 14 branches in operation but subsequently the number fell to 6, but since 1910 the number has been 13. When the paid-up capital first amounted to Rs. 1,00,00,000 the reserve fund was only Rs. 16,40,865, but while the capital has remained unchanged a steady increase has occurred year by year in the reserve fund, until in 1909 it was increased to a sum in excess of the paid-up capital, while at the present time it amounts to Rs. 1,00,00,000. As is the case with the other two chartered banks in India, since 1876 any active control of the Government in the business has definitely ceased, though owing to the large amount of its business entrusted to the Bank the Government has the right to call for any information in regard to the affairs of the Bank which it may deem desirable. The weekly average of the Government balance in 1912 amounted to Rs. 1,38,82,594. The weekly average of the other deposits, &c., was Rs. 10,65,89,113. In 1911 the weekly average was somewhat higher, amounting to Rs. 11,01,73,917. In order to show the great growth of the institution we give herewith the figures of the balance sheet as at June 30 of each year from 1902.

It may be noted that the deposits of the Bank, after showing great fluctuations and no very great expansion between 1868 and 1898, have in the last 14 years displayed immense growth, and that since 1904 the addition has been remarkable.

In 1870 the other deposits were Rs. 2,28,35,000, £2,283,500 at 2*s.* per rupee, and in 1898 they were no more than Rs. 2,85,40,800, or £1,902,000 at 1*s.* 4*d.* per rupee. By 1903 they had risen to Rs. 5,74,60,000, or £3,831,000, and in 1912 they were Rs. 10,65,89,000, or £7,106,000. In 1915 they were Rs. 13,65,96,539, or £9,106,435. The cash, which at June 30, 1914, amounted to Rs. 5,58,79,990, had increased by June 30, 1915, to Rs. 7,61,46,801, the proportion to the total assets rising from 39.3 per cent. to 47.9 per cent. Bills discounted, on the other hand, fell from Rs. 1,59,17,925 to Rs. 98,16,508, the proportion to the total assets falling from 11.2 per cent. to 6.2 per cent. The loans also dropped from Rs. 5,49,45,499 to Rs. 5,21,99,152, the proportion dropping from 38.6 per cent. to 32.8 per cent. Investments, however, rose from Rs. 1,44,08,163 to Rs. 1,91,70,244.

BANK OF BRITISH NORTH AMERICA.

Head Office: 5 Gracechurch Street, London, E.C.

Capital—
Authorised, Subscribed and Paid up, 20,000 Shares, £50 each, fully paid £1,000,000
Price of £50 *Share*, £60½xd. *Dividend*, 8%. *Yield*, £6 12*s.* 3*d.*%.

For a year or more before the outbreak of war Canadian banks had followed a policy of restraint, for a reaction following on a long period of exceptional expansion had been felt. The banks did not in any way curtail the reasonable requirements of their customers, but they endeavoured to control transactions of a speculative character and others which appeared to involve too large an expenditure. The result was that when war broke out the position of the banks generally was sound and strong, and the financial measures adopted by the Dominion Government gave confidence to the community at large and averted possibility of panic. On November 30 last the Bank of British North America held in cash, legal tender, and bank balances 64 per cent. of their immediate liabilities. Naturally the cautious policy steadily carried out by the board was not consistent with large earnings, and for four months out of the last financial year the management had day by day seen large balances unproductive, and had set aside opportunities of adding to profits because it was felt that the first duty was to maintain the safety and credit of the Bank. The result was that the profit for the year only amounted to £110,255, as compared with £141,728 for the previous year. Though the fall was a substantial

The proportion that the shown profits bear to the paid-up capital is 11.0 per cent., to capital and reserve combined 7.0 per cent., and to the total working resources .9 per cent.

The Bank of British North America is one of the few remaining chartered banks. It was established in 1836 and incorporated by Royal charter in 1840, a charter which expired on July 1 last but has been extended to July 1, 1921. It may be added that the first annual meeting of the Bank in London occurred at the time of the proclamation of the accession of Queen Victoria. One of the grounds upon which the Bank was founded was that the institution "would tend in no small degree to cement the connection between these valuable colonies and the Mother Country."

The Bank has an authorised note issue limited to 75 per cent. of the paid-up capital, though an excess may be issued on the deposit of security of an amount equal to such excess, the total at any time in issue not to exceed the paid-up capital except between October and January, when the issue may be increased up to an amount not exceeding 10 per cent. of the combined unimpaired paid-up capital and reserve. The paid-up capital at present is as shown above—£1,000,000—while the reserve fund at November 29, 1914, amounted to £620,000.

The paid-up capital has been stationary, at any rate so far back as our records go, and the growth of the institution is marked in other ways, as may be seen from the accompanying statement, which deals with the recent progress of the institution.

As the name indicates the business of the Bank is conducted in Canada, and of the 98 offices at present open for business 9 are in Quebec, 22 in Ontario, 1 in Nova Scotia, 5 in New Brunswick, 21 in British Columbia, 9 in Manitoba, 24 in Saskatchewan, 5 in Alberta and 1 in Yukon territory. In addition to the head office in London there are two agencies in the United States of America.

Very substantial growth is shown in the deposits, which as recently as 1905 were only £4,172,236. By November 1913 they had doubled in amount, reaching a total of £8,273,896. At November 30, 1914, they further advanced to £9,068,444, the proportion to the total liabilities thus rising from 64 per cent. to 72.9 per cent. Bills payable, however, fell from £1,544,488 to £436,542, the proportion falling from 12 per cent. to 3.5 per cent. On the other side of the accounts, the chief change is in the amount of cash held. At November 30, 1913, this amounted to £1,674,851, or 13 per cent. of the total assets, and at November 30 last the amount increased to £2,616,443, the proportion to the total assets being as much as 21 per cent. Money at call and short notice, however, fell from £1,915,715, or 14.9 per cent., to £955,202, or 7.7 per cent. On August 4, 1914, the acceptances amounted to £1,044,000. In accordance with the understanding existing between all the banks, acceptances falling due during the first month of the moratorium were re-accepted, and when that period came to an end re-acceptances and maturing acceptances were met together, with the result that between August 4 and November 30 £621,000 of the Bank's acceptances were paid off, leaving the figure standing at £343,005. In the statement herewith we indicate the growth of the Bank by an analysis of the liabilities and assets for various years from 1860.

As regards the future, the Chairman pointed out at the meeting in March last that the Bank is not discouraged by unnecessary fears, but, on the other hand, it is not unduly optimistic, knowing the difficulties lying ahead. In looking back, however, it was a relief to him to feel how much worse the position might have been. If they realised what it meant, after borrowing £40,000,000 sterling year by year, to find those supplies in one moment absolutely cut off, and to be compelled to stand alone, with no outside assistance

to lean upon, they would come to the conclusion, as he had done, that Canada had stood up bravely under circumstances of extraordinary difficulty. It was, of course, to the coming harvest that they must look first of all for relief, and every province of the Dominion was doing its utmost to increase its area of cultivation, and thereby provide for the needs of the Empire.

Fortunately, the harvest of the current year is a very large one, and as it is realising profitable prices the position in Canada is rapidly improving. The large orders for war material placed in Canada by the British Government are also assisting the country.

BANK OF BRITISH WEST AFRICA, LTD.

Head Office: 17 and 18 Leadenhall St., London, E.C.

Paid up, £4 per Share 400,000
Price of Share, £5¼. *Dividend*, 6½ %. *Yield*, £5 0*s.* 5*d.*%.

During two-thirds of the financial year which ended March 31, 1915, the trading of West Africa was most severely affected by the War, and the operations of the Bank have, in consequence, been considerably impeded. The business, however, has been well maintained, and while no great improvement can be looked for until peace is restored the prospects are considered encouraging. One definite result of the War is noted in the report, which points out that the Hamburg office of the Bank is now in the hands of controllers appointed by the German Government, and as no return can be obtained the figures of that branch cannot be brought into the accounts. Adequate provision, however, has been made for possible losses in this connection. Naturally a reduction has occurred in the profit, which has amounted to £138,902, as compared with £148,049. On the other hand, the working expenses were heavier, rising from £87,249 to £91,360. Consequently, the net profit was only £47,542, as compared with £60,800. By reason of the fall the directors decided to reduce the dividend from 9½ per cent. to 6½ per cent. A sum of £13,000 was carried to the reserve fund, raising it to £200,000, but in consequence of the further fall in the value of investments, and in order to provide for other contingencies arising out of the War, a sum of £50,000 has been withdrawn from the reserve fund, leaving it standing at £150,000. Herewith we set out the profit record since 1905:—

Profits of the Bank of British West Africa, Limited.

Year ended Mar. 31	Gross Profit.	Salaries and other Expenses.	Net Profit.	Dividend. Amount.		Reserve, Deprn., &c.	Carried Forward.
	£	£	£	£	%	£	£
1915 ...	138,902	91,360	47,542	26,000	6½	21,000	10,141
1914 ...	148,049	87,249	60,800	39,000	9½	24,250	9,599
1913 ...	122,590	78,635	43,955	26,280	9	17,000	6,729
1912 ...	87,880	58,231	29,649	20,000	9	8,680	6,053
1911 ...	78,490	48,390	30,100	18,000	9	10,000	5,085
1910 ...	61,590	41,022	20,568	11,712	9	8,000	2,985
1909 ...	48,669	37,818	10,851	9,000	9	2,000	2,129
1908 ...	47,875	31,873	16,002	8,400	10	7,500	2,278
1907 ...	40,653	27,251	13,402	4,800	8	8,000	2,176
1906 ...	35,097	25,979	9,118	4,800	8	4,000	1,574
1905 ...	34,092	26,198	7,894	4,800	8	2,880	1,256

The proportion that the shown net profit bore to the paid-up capital at March 31, 1915, was 11.9 per cent., to capital and reserve combined 8.6 per cent., and to the total working resources 1.5 per cent.

The Bank was established in the year 1894, the head office being in Liverpool, and there was one branch on the coast of Lagos, Southern Nigeria.

At March 31 last the acceptances amounted to £162,589, as compared with £309,338, while the deposits, on the other hand, rose from £2,222,805 to £2,496,520. On the other side of the accounts, the chief change has occurred in the cash, which has risen from £830,596, or 26.4 per cent. of the total assets, to £1,161,397, or 35.9 per cent. of the assets. The investments also have risen from £419,159, or 13.3 per cent., to £527,520, or 16.3 per cent. Advances also have risen from £566,321, or 18 per cent., to £706,741, or 21.9 per cent. On the other hand, bills discounted have fallen from £965,626, or 30.6 per cent., to £607,089, or 18.7 per cent. The growth of the business since 1900 may be seen from the statement herewith.

In order to cope with the increasing business it was considered desirable in 1910 to remove the head office from Liverpool to London, a special reason being the necessity of being in the best position to deal with the considerable shipments of specie that have to be made to the West Coast to meet the requirements of shippers of African produce, amounting roughly to about £1,000,000 in gold and silver coinage per annum. Owing to the absorption of the business of the Bank of Nigeria, the Bank's position has been greatly strengthened in both Northern and Southern Nigeria, and at the present time, in addition to the London and Liverpool offices, the Bank has one office in Hamburg, one in Morocco, one in the Canary Islands, one in Gambia, two in Sierra Leone, one in Liberia, one on the French Ivory Coast, eight in the Gold Coast

and Ashanti, and twelve in Nigeria. In addition to these, there are various agencies at different spots in West Africa, and one in New York.

As a result of the findings of a Special Committee, a Currency Board was appointed by the Secretary of State, and under the direction of the board new West African coins were introduced into West Africa in June 1913. The new silver West African coins are of the nominal value of 2*s.*, 1*s.*, 6*d.*, and 3*d.*, their weight and fineness being the same as those of the corresponding coins used in the United Kingdom.

At the meeting on June 23 Lord Milner pointed out that the diminution of profit was not due to any reduction in their resources. On the contrary, there was an increase in the current accounts and fixed deposits from £2,025,000 to £2,267,000, a very gratifying feature, especially as the increased deposits were largely in West Africa. But while the money entrusted to them had increased in amount, they had had fewer opportunities of making use of it. Their cash in hand, which was £830,000 in their last balance sheet, now stood at the enormous figure of £1,161,000, or 46 per cent. of their total liabilities to the public. This was, of course, a magnificent position from the point of view of security, but it was not equally exhilarating from the point of view of profits. The reason, of course, was that, owing to the diminution in trade due to the War, there was less demand for the commodity which they as bankers had to sell—namely, money. The Bank had sold to its clients in West Africa £1,500,000 less than in the previous year, 1913-14. There had been reductions in the local value of the exports of all classes of native produce, and the paralysis of trade, particularly in the early months of the War, also led to a large reduction of imports, causing an appreciable shrinkage in their outward bill-discounting business, and resulting, he feared, in a considerable falling-off in the revenues of the Colonial Governments. Then, again, shipping had been greatly interfered with as a direct result of the War, and, notwithstanding the strenuous endeavours of their friends, Messrs. Elder, Dempster and Company, the West African trade was now suffering from shortage of steamers.

BANK OF HAMILTON.

During 1914 business conditions in the Prairie Provinces of Canada were not satisfactory. The wave of prosperity raised by the expenditure for railway construction had receded. Real estate speculation had been driven beyond all reason. The farmers, generally speaking, had poor crops for two years, largely due to drought, but this encouraged them to give more attention to mixed farming, and more attention was paid to the proper cultivation of the land and the elimination of weeds. In British Columbia matters were worse, affairs being aggravated by world conditions. Excessive speculation in real estate and building had their inevitable result. Lumbering was depressed owing to the falling off of the demand from abroad and from the Prairie Provinces. In Ontario crops were very fair, but there was much speculation in real estate in the cities, and trade generally was dull. Naturally, the unsatisfactory conditions prevailing were accentuated by the outbreak of war. The financial situation, however, was met in a resourceful manner by the Minister of Finance and apprehension was allayed by making bank-notes legal tender, and by making it possible to get funds in any emergency through the deposit of securities with the Government. There was no moratorium and no panic, and in the West as well as the East people settled down to adjust themselves to the altered conditions. The Bank of Hamilton had adopted early a cautious policy and attempted to maintain larger reserves than usual, but keeping so much cash not earning interest, together with the lessened volume of business, could only result in lean profits. The falling off, however, is of a comparatively small amount, the profit for the twelve months to November 30, 1914, amounting to $485,625, as compared with $498,273 for the previous year. The result is, while the directors are able to maintain the dividend of 12 per cent., a sum of $75,000 has been set aside as provision for depreciation in securities and for contingencies, and $44,310 has been set aside for pension

* Six months to November 30. † Year to May 31.

The proportion that the shown net profit bears to the paid-up capital is 16.1 per cent., to capital and reserve combined 7.3 per cent., and to the total working resources of the Bank 1.1 per cent.

The Bank of Hamilton was incorporated in 1872, with a paid-up capital of $275,000. Steady progress was made, and while there is nothing especially outstanding to mark the growth of the institution, it has gradually built up a substantial business, and by opening a considerable number of branches in various parts of the Dominion the Bank has advanced with the growing prosperity of Canada. The first branch was opened in 1873, and by 1888 the total number of offices was eight. After the year 1889, and the accession of Mr. J. Turnbull to the general managership, steady progress took place up to 1900, since when the growth has been more rapid, the dividend being increased from 8 per cent. to 12 per cent. By 1900 the number of branches in operation was 29, and between that date and 1912 the number rose to 130. The present number is 125. Of these, 62 offices are in Ontario, 26 are in Manitoba, 21 in Saskatchewan, 7 in Alberta, and 9 in British Columbia. It will thus be seen that the Bank is largely interested in the development of the West. The first balance sheet showed that the deposits amounted to $235,000; and in the following 17 years they grew to $3,472,000 in 1890. They increased to $10,059,000 in 1900, and have now risen to the great sum of $34,523,828. Since 1905 the total deposits have practically doubled in amount.

In May 1880 the paid-up capital was $745,100, the reserve fund amounting to $80,000. By May 1890 the paid-up capital had risen to $1,000,000, while the reserve fund was $450,000. In the following 10 years the paid-up capital increased to $1,703,212, while the reserve fund rose to $1,234,120. In May 1910 the paid-up capital was $2,680,570, and for the first time the reserve fund was brought up to a figure in excess of the paid-up capital, amounting to $3,000,000. At November 29, 1913, the whole authorised capital of $3,000,000 was issued, while the reserve fund was brought up to $3,600,000

No change has occurred in either the capital or the reserve fund during 1914. The note circulation, however, has fallen from $3,259,820 to $3,022,100. On the other side of the accounts, the total cash at November 30 amounted to $7,858,484, as compared with $8,528,788. The investments fell from $3,786,702 to $3,364,059. The other main change is in the sums due by other banks, which have fallen from $961,090 to $553,111. Altogether, considerable growth is shown by the Bank, as may be seen from the statement herewith of the liabilities and assets for various years since the formation of the Bank.

At the meeting in January last the Chairman pointed out that doubtless a further period of adjustment was in store, "but a larger acreage has been prepared for next year's crops, and, with the high prices which can be expected, our farmers should do well, and in turn all those businesses revive which are dependent upon the purchasing power of the farmer. Without trying to see too far ahead, let us all try to improve the present. Let many who have been living in town without working go back to the land; let the farmers work their farms more thoroughly; let others realise that manufacturing business tends to become more and more scientific, and the adequate utilisation of by-products may settle the question of the survival of an industry; let there be less extravagance both by individuals and municipalities, and I am sure, if we cultivate the old-fashioned virtues of courage, economy, and industry, we may face the future with calm cheerfulness."

The crops of this year have been quite as great as anticipated, and the wheat yield is calculated to be no less than 308 million bushels, against 161 million bushels last year; while the oat crop is no less than 488 million bushels, against 313 million bushels last year. With good prices these crops will yield a great income for Canada.

CONSIDERING the unfavourable conditions of trade, accentuated by the European war and the low Bank rate which prevailed, it is not surprising to find that the profits of the Bank of India, Limited, for the twelve months to June 30, 1915, shows a reduction as compared with the previous year. They have amounted to Rs. 8,66,597, as compared with Rs. 9,72,457. Expenses have hardly varied, and the net profit for the year has amounted to Rs. 5,60,303, as compared with Rs. 6,65,599. For the twelve months to June 30, 1909, the dividend was placed on a 6 per cent. basis, as compared with 5 per cent. previously paid, and this rate has since been steadily maintained.

The profit record is as follows:—

Profits of the Bank of India, Limited, since Inception.

* About six months.

The proportion that the shown net profit bears to the paid-up capital is 11.2 per cent., to capital and reserve combined 10.1 per cent., and to the total working resources 1.7 per cent.

The Bank of India, Limited, was formed in Bombay in the autumn of 1906, its promoters being Bombay citizens closely connected with the business and public life of the city, and the board of directors was constituted so as to be as widely as possible representative of every community in the Presidency.

The intention of the promoters was primarily to finance Bombay local trade, a business which had hitherto been largely in the hands of the Bank of Bombay—the Presidency Bank. It was not intended that the new Bank should compete with the exchange banks, and under its articles of association the directors were prohibited from entering into foreign exchange operations. The Bank's articles, which were modelled on the Presidency Banks Act, also prohibited the directors from lending against shares of joint-stock companies and the mortgage of landed property, thus confining the Bank's operations entirely to Indian business in which the Presidency banks were authorised to engage. The last two provisions proved to be a severe handicap. The Presidency banks receive large deposits bearing no interest from Government and the public. The new Bank

had no such advantage. It had to pay interest on all its deposits, and found that as long as it was restricted to loan business of the class allowed to the Presidency banks it could obtain no better rates for its advances than they did. Advances on shares and the mortgage of landed property give a better return than those on any other class of security usually taken by good banks in India, and in the stress of competition the new Bank turned to these. The articles of association were therefore revised in 1912, when the prohibitions to advance against shares and the mortgage of landed property were removed.

The Bank's capital was fixed at Rs. 1,00,00,000 (£666,666), in shares of Rs. 100 each, and within a few months after its formation half the amount, Rs. 50,00,000 (£333,333) was called up. No further call has since been made.

The Bank's policy has been to engage in a comprehensive local business. It has no branches, and since its articles were revised has, with the exception of exchange operations, engaged in every class of banking business which is undertaken by banks of good standing in the city. Its deposits come mainly from the Indian public, public bodies, and native chiefs and their States. It finances cotton mills (spinning and manufacturing), ginning factories, raw cotton, seeds and general Indian produce, silver bullion, Government paper, share transactions, and, to a small extent, landed property.

THE outbreak of war was the occasion of a brisk demand for accommodation—accommodation which, however, rapidly subsided, and during the closing months of 1914 the Bank of Madras found it difficult to employ its funds fully. The average Bank rate for the six months was 5.16 per cent., as compared with 5.54 per cent. in the corresponding period of 1913. During the first six months of 1915 the business continued to be adversely affected by war conditions, but not to the extent that might reasonably have been expected. Money was nevertheless in poor demand, the average Bank rate during the period being 5.87 per cent., as compared with 6.63 per cent. in the corresponding period of 1914. Naturally profits suffered somewhat, the gross profit for the twelve months to June 30, 1914, amounting to Rs. 23,44,316, as compared with Rs. 25,31,260. Moreover, working expenses rose from Rs. 11,96,740 to Rs. 12,25,320, so that the net profit fell from Rs. 13,34,520 to Rs. 11,18,996. It was possible, however, to maintain the dividend at 12 per cent., calling for Rs. 9,00,000, while the balance was added to the carry-forward, bringing it up to Rs. 4,35,319. The dividend paid by the Bank has shown fair variations, as may be gathered from the fact that while for 1888 the rate was 10 per cent., for 1889 it rose to 14 per cent., while for 1890 it dropped to 10½ per cent. and for 1891 to 8½ per cent. A steady rise then occurred, until for 1897 the rate was 13 per cent. It subsequently dropped to 8 per cent., eventually recovering to 10 per cent., and gradually rose until for the second half of 1913 it was raised to a 12 per cent. basis, which has since been maintained. Herewith we set out the profit record for each year since 1905:—

Profits of the Bank of Madras since 1905.

Year ended June 30	Gross Profit. Rs.	Salaries and Other Expenses. Rs.	Net Profit. Rs.	Dividend. Amt. Rs.	Dividend. Rate. %	Reserve, Invest., Deprn., &c. Rs.	Carried Forward. Rs.

* Including Rs. 49,764 interest on new capital.

The proportion that the shown net profit bears to the paid-up capital is 14.9 per cent., to capital and reserve combined 7.4 per cent., and to the total working resources 1.0 per cent.

The Bank of Madras is one of the three Presidency banks, conducting the general banking business of the Government in the Madras Presidency. It was incorporated by charter in 1843, the original capital being Rs. 30,00,000, divided into 3,000 shares of Rs. 1,000 each, of which 300 shares were the property of the Governor and Council of Madras for the time being on behalf of the East India Company. In 1862 an increase of the capital to 6,000 shares of Rs. 1,000 each was authorised; and in 1863, 750 additional shares were issued, in the proportion of one-fourth of a share to every original share, at a premium of 50 per

cent. In 1865 a further issue of 1,875 shares was made, and allotted in the proportion of one new share to every two shares held, the capital being placed at a premium of 10 per cent. The capital then remained unchanged until 1876. Up to this year the Government exercised a considerable amount of control over the affairs of the Bank; but with the passing of the Presidency Banks Act of 1876 a change in policy occurred, and any active interference of the Government in the routine of the Bank came to an end, and relations between the Government and the Bank became merely those of banker and customer, though the Government still retains the right to call upon the directors for any information in regard to the affairs of the Bank which they may deem desirable. Moreover, the capital of the Bank can only be increased or reduced with the previous sanction of the Governor-General in Council, on a special resolution passed by a majority at a meeting at which not less than one-third of the entire body of shareholders are present, in person or by proxy, representing at least one-half the paid-up capital of the Company. Beyond this, while the directors have power to establish branches anywhere in the Madras Presidency considered desirable, no branch may be established outside the limits of the Presidency without the previous sanction of the Governor-General in Council. In 1876, as a result of the passing of the Bank Act, a rearrangement of capital took place. The Government decided to part with its shares, and the capital was reduced to Rs. 50,00,000 by the Bank taking over at a premium of 10 per cent. the 56½ shares held by the Government and by the purchase and cancellation of 62½ shares, thereby reducing the capital to 50 lacs, in shares of Rs. 500 each, with power to increase to Rs. 1,20,00,000. The capital has been increased since then, and at December 31 last the amount paid up was Rs. 75,00,000. Under its original charter the Bank had the right to issue its own notes to an amount not exceeding one crore at any time, but in 1861 the Government of India reserved the issue of currency notes as a State monopoly, and the privilege of issue was accordingly withdrawn from the Bank as from February 28, 1862. In lieu of the privilege the Government Treasury was transferred to the Bank, and it was for the first time authorised to open branches. The first branch, Cochin, was opened in May 1862. Others have since been opened, and at the present time there are 17—namely, Alleppey, Bangalore, Bimlipatam, Calicut, Cocanada, Cochin, Coimbatore, Colombo, Guntur, Madura, Mangalore, Masulipatam, Negapatam, Ootacamund, Salem, Tellicherry, and Tuticorin.

Negotiations are now going on for conducting Government work at Bellary, Cuddalore, and Trichinopoly, and if brought to a satisfactory conclusion branches of the Bank will be opened at these places. A site has also been purchased for the erection of premises in the Mount Road, Madras, where an office will be opened as soon as practicable. The growth of the Bank may be seen from the following statement of liabilities and assets for various years from 1844:—

BANK OF MAURITIUS, LIMITED.

Head Office: 10 George Yard, Lombard Street, London, E.C.

Capital—

Authorised, 20,000 Shares of £10 each ...	£200,000
Subscribed, 12,555 Shares of £10 each ...	125,550
Paid up	125,550

Price of Share, £14. *Dividend*, 10%. *Yield*, £7 5*s.* 6*d.* %.

It was generally anticipated at the beginning of 1914 that the year would prove favourable to Mauritius in general and to the Bank of Mauritius in particular. The hopes that were expressed that the crop of sugar would at least equal that of the preceding year were fully realised, and, indeed, it was 25,000 tons in excess of any previous year. With the working of so large a crop in prospect the demand for money towards the middle of the year was altogether exceptional, and an unusually large proportion of the Bank's funds was employed when war broke out. Fortunately, it has always been the practice to maintain a strong cash position, and although financial facilities in London were for the moment much restricted, exchange with the Colony never broke down, and the Bank was able to make all necessary arrange-

ments for financing the crop to its completion; and, as the Chairman of the Bank pointed out at the meeting in March last, the effect of the War on the staple industry of Mauritius was immediate. Sugar which in July had been on offer in the colony at Rs. 8 per cwt. jumped at once on the outbreak of hostilities to Rs. 14, with every indication that this was but the beginning of the rise. Nor was the effect on the Sugar market in London less remarkable. For years this country has been practically dependent for its supplies on Continental beet sugars, no less than two-thirds of the consumption having been drawn from Germany and Austria alone. Naturally these sources of supply were automatically closed to us on the outbreak of war. Sugar rapidly doubled in price, and it became evident that unless immediate steps were taken the country would have to face a sugar famine. Government action, however, was immediately taken, and control obtained of the market. Among the sugars purchased were those of Mauritius, and the financing of a considerable portion of the necessary operations was placed with the Bank of Mauritius. Planters accepted the terms offered by the Government, and there is no doubt as to the fact that the planting community has very largely benefited by the combination of a large crop and good prices. Naturally, the cultivation of the largest crop ever produced in the Colony gave the Bank ample employment during 1914 for its funds at remunerative rates, and it is not surprising to find, therefore, that the gross profit is

1905 ...	26,899	9,764	17,135	7,533	6	5,000	6,628
1904 ...	24,733	9,297	15,436	7,533	6	10,000	2,026

The proportion that the shown net profit bears to the paid-up capital is 19.9 per cent., to capital and reserve combined 11.1 per cent., and to the total working resources 2.8 per cent.

This Bank was formed in 1894 to provide for the banking needs of the sugar planters of the island of Mauritius, and it has an authorised capital of £200,000, in 20,000 shares of £10 each. Of these 12,555 shares have been issued and are fully paid, making the paid-up capital £125,550, no change having occurred since the formation. The Bank is able to show satisfactory growth throughout its career. It has steadily built up a reserve fund, which at the end of 1914 amounted to £100,000.

During 1914 the deposits rose from £326,708, or 54.5 per cent. of the liabilities, to £666,975, or 73.6 per cent. On the other side, bills discounted and advances fell from £392,776, or 65.6 per cent., to £191,978, or 21.2 per cent. But, on the other hand, cash rose from £106,305, or 17.7 per cent., to £583,592, or 64.4 per cent. These figures are abnormal, and cannot be looked for in ordinary years. They are chiefly attributable to the disposal of a crop of record size at exceptional prices within a much briefer period than usual. The reduction in the bills discounted and advances is accounted for by the closing of the usual channels for the purchase and shipment of the crop and to an almost complete lack of demand for accommodation. Investments have risen from £46,700 to £121,000. In the early months of the year, funds being available, the Bank increased its holding in Colonial Government securities, while in November last it took up a portion of the War Loan. Herewith we set out a comparison of the liabilities and assets of the Bank for various years since formation.

BANK OF MONTREAL.

Head Office: Montreal, Canada.
London Offices: 47 Threadneedle Street, E.C.; 9 Waterloo Place, Pall Mall, S.W.

Capital—

Authorised $25,000,000
Subscribed, in 160,000 Shares of $100 ... 16,000,000
Paid up, $100 (Reserve liability, $100) ... 16,000,000
Price of Share, $230. *Dividend*, 12 %. *Yield*, £5 4*s.* 5*d.*%.

At the annual meeting of the Bank of Montreal in December last the President, Mr. H. V. Meredith, reviewed the general trade and financial situation in Great Britain, the United States, and Canada. He pointed out that in the Dominion a period of several years of remarkable growth and progress was accompanied by large capital expenditures by industrial, municipal, and other corporations, and an ambitious programme of railway construction, made possible by the ease with which money could be obtained. Then followed a period of unduly inflated and fictitious values, bringing about suspicion and distrust of the Dominion's economic position in the Money markets of the world. The ensuing check caused embarrassment in some instances, but had a salutary effect on the country in general, bringing it to realise the fact that unproductive expenditure must of necessity cease for a while, and the efforts of the country be directed towards the development of natural resources, accelerated by a large flow of immigration. It fortunately happened that for over a year previously manufacturers and merchants, preparing for such a contingency, had entered upon a period of curtailment and readjustment, and the economic position had been approaching a more normal condition. Consequently, the outbreak of war and the financial crisis that followed found the country fairly well prepared. The action of the Finance Minister in providing facilities for rediscount and in making bank-notes legal tender had a steadying effect throughout the country, and enabled the banks to meet the legitimate demands of business and to keep in hand ample resources against deposits. Naturally, however, the accounts of the Bank of Montreal reflect the current conditions, and

the profits for the twelve months to October 31, 1914, fell from $2,648,403 to $2,496,452. Nevertheless the Bank was able to maintain a 12 per cent. dividend, and after writing off $290,000 for bank premises and carrying $100,000 to the Canadian Patriotic Fund, the carry-forward was increased from $1,046,218 to $1,232,670.

In the following statement we show the profits of the Bank and the manner in which they have been divided from 1904:—

Profits of the Bank of Montreal.

1905 ...	1,638,659	1,420,000	10	—	801,855
1904 ...	1,609,207	1,400,000	10	—	583,196

The proportion that the shown net profit bears to the paid-up capital is 15.6 per cent., to capital and rest combined 7.8 per cent., and to the total working resources, amounting to $259,481,663, .9 per cent.

The Bank of Montreal occupies a special position amongst the banking institutions of the Dominion of Canada, inasmuch as it is the financial agent of the Government of Canada. It is also the oldest and the largest of the Canadian banks, and it is perhaps scarcely too much to say that the history of the Bank is the history of Canada. It was established in 1817, its formation being due to the retirement by the British Government of their Army bills issued to meet the expenses of the war of 1812 with the United States. The capital was limited to £250,000 currency, divided into 5,000 shares of £50 each. In Canadian or Halifax currency the pound was equal to $4, the currency being established for the province of Canada by an Ordinance of 1767. When the Bank started business the paid-up capital was $350,000. The growth was of a rapid character. In 1819 the capital was increased to $650,000, and in the following year to $750,000. In 1829 it rose to $850,000, in 1841 to $2,000,000, in 1845 to $3,000,000, in 1855 to $4,000,000, in 1860 to $6,000,000, in 1873 to $12,000,000, in 1903 to $14,400,000, and in 1911 it was increased to $16,000,000. The last increase consisted of $1,600,000, and was brought about mainly with a view of extending to that amount the right to increase the issue of notes in circulation. Early in its history the Bank opened a branch in Quebec, but it was not until after 1855 that the working of the Bank was reorganised according to the Scotch system; and since that time offices have been opened in various parts of the Dominion, and at the present time the number of offices opened amounts to 181. In the first full year of the Bank's operations—viz., 1819—a dividend was paid at the rate of 8 per cent. per annum, and since then, with the exception of the years 1827 and 1828, when the Bank did not pay any dividend, the annual distributions have ranged from 6 per cent. to 16 per cent., according to the earnings, but for many years to 1911 the distribution was steadily maintained at the rate of 10 per cent. per annum. For the past three years the rate has been 12 per cent. per annum. After the distribution of 8 per cent. was made in 1819 a balance of $4,168 remained, which was carried to a reserve. Since that time the reserve, or rest, has steadily grown. In 1825 it was $30,780, and in 1840 it amounted to $89,480. Since then the growth has been uninterrupted, and at October 31, 1914, it amounted to no less than $16,000,000, or equal to the paid-up capital.

FINANCIAL AGENTS OF THE GOVERNMENT OF THE DOMINION OF CANADA.

The Bank undertakes monetary business with all parts of Canada, Newfoundland, and the United States, and issues Sterling and Currency Drafts and Cable Transfers.

There is one special point to which attention should be directed. The Bank of Montreal has sometimes been criticised in the Dominion for keeping such large balances in other countries, and practically none at home, but it will be recognised that this cautious policy is a great safeguard against financial disturbances in Canada. It cannot, of course, be supposed that the Bank is ignoring the return receivable on placing $10,000,000 or $20,000,000 on loan in Canada with a 5 per cent. call rate, as compared with, say, 2 per cent. actually received; but it is the necessity of getting money back at three hours' notice on any date required that is the determining factor, and with so large a proportion of its funds placed in this position it is evident the Bank is carrying out a praiseworthy policy in regarding the strength of its position rather than the temporary advantage of receiving a larger return on this portion of its funds. This wise policy on the part of Canada's leading bank is, and has been for many years, the financial sheet-anchor of the Dominion, and has won for the institution the name of the Bank of England of Canada.

We set out herewith the liabilities and assets for various years from 1885.

Sir Frederick Williams-Taylor, in his last annual address to the shareholders, pointed out that from a financial point of view the outstanding result of the War upon Canada has been the instantaneous stoppage of the supply of British capital, to which the country became so accustomed, that sight was frequently lost of its importance as a factor in the development of the Dominion. As a result, the country must limit its imports to the approximate volume it can pay for its exports, or it must borrow elsewhere, and he indicated that if the United States desired Canada to purchase anything approaching the volume of the past it must be prepared to provide loans to the principal public borrowers of the Dominion. Sir Frederick finally summed up the situation as follows: "In conclusion, the financial position of our country now is that, consequent upon the prompt measures adopted by our Minister of Finance, and owing to the elasticity and excellence of our banking system, Canada is standing the strain without collapse. We are adjusting ourselves to the heavy burden thrust upon us without warning while in the constructional stage, and though here and there weak spots will develop the general structure will surely stand the strain, and we hope and believe we, as a country, can safeguard the situation. It is obvious to everyone in the Dominion and to our friends abroad that we are cast upon our own resources, that we are on trial, and that our future development will depend in no small measure upon the condition in which we emerge from this trying ordeal. The longer the duration of the War the more will the Colonial props of the Empire, including Canada, suffer; but good will come out of evil, for our energies will be turned to the development of our great natural wealth, particularly our vast agricultural resources, and we can then look forward with confidence to eventually emerging from present conditions a wiser people, with our affairs on a healthier, more normal and sounder basis than that with which we were threatened."

The great wheat and oat crops of this year, with profitable prices, together with the extensive orders for goods of all kinds from the British Government, have given Canada a great income, and whereas in recent years imports into Canada were largely in excess of exports, exports now greatly exceed the imports. The War is indeed proving of great economic advantage to Canada, and its after-effects should also contribute to her well-being by stimulating emigration from the old countries. The Bank of Montreal should derive an important share of these advantages.

BANK OF NEW SOUTH WALES.

Head Office: Sydney, New South Wales.
London Office: 29 Threadneedle Street, E.C.

Capital—
Subscribed, 175,000 Shares of £20 each ... £3,500,000
Paid up £3,500,000
Price of Share, £35¾. *Dividend,* 10%. *Yield,* £5 13*s.* 6*d.* %

THE Bank of New South Wales came comparatively unscathed through the financial and banking crisis in 1893, and, though profits naturally fell away and it was necessary to reduce the dividends, it may be pointed out that the rate never fell below 9 per cent., a rate which was maintained from 1895 to 1900 inclusive. This was followed by a distribution of 10 per cent., a rate which has been maintained since that date.

The profit for the twelve months to September 30, 1914, amounted to £522,071, as compared with £537,598. The 10 per cent. dividend called for £350,000, and of the balance £150,000 was carried to reserve and the carry-forward increased from £68,658 to £90,729.

Profits of the Bank of New South Wales.

Year ended Sept. 30	Profit.	Dividend. Amount.	Dividend. %	Balance.	Reserve, &c.	Carried Forward.
	£	£		£	£	£
1914... ...	522,071	350,000	10	172,071	150,000	90,729

1904... ...	240,017	200,000	10	40,017	40,000	18,459

The proportion that the shown net profit bears to the paid-up capital is 14.9 per cent., to capital and reserve combined 8.8 per cent., and to total working resources 1.3 per cent.

The Bank of New South Wales is not only one of the earliest of our Colonial banks, but it is the oldest public company established in Australia, dating back to April 8, 1817. The formation of the Bank was due to a great confusion of coinage and note issues of an indiscriminate nature. In 1800 the Government of the Colony fixed definite values for a number of coins that were in circulation. The following shows the values attached:—

	£	*s.*	*d.*		£	*s.*	*d.*
A guinea	1	2	0	A Spanish dollar... ...	0	5	0

A gold mohur ...	1	17	6	" " ½ " ...	0	0	1
A pagoda	0	8	0	" " ¼ " ...	0	0	0½

In November 1816 resolutions were passed at two meetings to found a public colonial bank, with £20,000 capital in £100 shares. About £12,000 was subscribed immediately and 25 per cent. called up, the Bank starting business, as already stated, on April 8, 1817. The first balance sheet, to December 31, 1817, showed total liabilities of £11,401, of which £3,625 was capital, £5,636 notes, and the balance deposits, &c. In 1912 it was decided to increase the capital to £3,500,000, and this has now all been paid up. A steady increase has likewise occurred in the reserve fund. In 1870, £33,333 was taken from this fund for losses, reducing it to £300,000. Since then year by year, with only one or two exceptions, the reserve fund has steadily mounted upwards, and at March 31 last it was brought up to £2,550,000. At March 31, 1911, the note circulation amounted to £1,218,534. By September 30 the notes decreased to £442,798, a decrease of £840,000. The process of paying off the notes is still going on, and of the amount now left in the balance sheet of £370,918 about £165,000 represents the circulation in New Zealand; the reason for the reduction being the legislation of the Commonwealth Government taking away the power of note issues from the banks.

In 1854 the deposits amounted to £2,000,000; by 1862 to £5,000,000; by 1872 to £6,000,000; by 1881 to £10,000,000; and by 1892 to £20,000,000, the deposit figures up to this year including the amount of the acceptances. In 1894, as a result of the financial crisis, the deposits fell off; but the ease with which the Bank weathered the banking storm then experienced has since brought to it a greatly increased business. In 1900 its deposits were nearly £21,000,000, and in 1912 they were £34,614,798. This increase occurred in spite of a considerable decrease in the aggregate of the deposits held from the Commonwealth and the various State Governments. With the opening of the Commonwealth Bank in January 1913 the Commonwealth Government deposits with the various States were transferred to that institution, and the various State Governments kept smaller balances with the local banks than had been

the case in the past. Consequently, the deposits from the general public showed an increase. At September 30 last the deposits totalled £36,722,127.

The Commonwealth Bank has kept its account with the Bank of New South Wales since it started, and as such funds are not considered by the Bank as available for use in the ordinary business a larger amount of cash than usual has been kept to meet the situation.

Herewith we set out the assets and liabilities for various years from 1865.

Comparing the liabilities of the Bank of New South Wales at March 31, 1915, with those for March 31, 1914, the main alteration is an increase of a little over £2,000,000 in the deposits, which amount to £38,778,055, which may be attributed to the natural desire to hold on to money pending developments. While a considerable proportion of the increase is government money, there is a large general increase well spread over all the bank's fields of operations. On the other hand the coin, cash balances, and other bank-notes are £472,000 less, money at short call is £1,730,000 less as operations with London have been heavy, but the Australian notes are £3,318,000 more, so that the total of cash and call money shows an increase of £1,116,000. The Bank of New South Wales is the largest receiver of cash among the trading banks in the Commonwealth. At its present dimensions the note issue is distinctly an emergency measure, and must be viewed in conjunction with other war measures. The Government securities are slightly over £1,000,000 higher, the Bank having taken an interest in the Imperial War Loan and also some additional local government securities of a temporary character. Bills receivable are about £512,000 down, due to there being no wheat bills this year. Advances are nearly £900,000 higher as a natural outcome of the situation. At the outset of the War it seemed as if the great export of the country, wool, might be indefinitely locked up in Australia, but ways and means were found, and most of the wool has been realised and at fair prices. Other products have been similarly dealt with. Unfortunately for Australia, coincident with the War extensively dry conditions prevailed practically throughout the Continent during last summer, costing the Company nearly the whole wheat crop and a valuable export, and there will be sheep and stock losses also. On the other hand the New Zealand business has been well maintained and free from such troubles.

BANK OF NEW ZEALAND.

475,710	Ordinary Shares (New) (£6⅔)	6⅔	15½	15	6 12	3

A CHANGE has taken place in the paid-up capital of the Bank of New Zealand during the twelve months to March 31, 1915. A portion of the guaranteed stock matured on July 19, 1914, and the amount outstanding at March 31, 1915, was £528,989, which compares with £1,000,000 at March 31, 1914. Similarly, 559 shares of a new Ordinary issue were offered for sale by tender, and brought in an average price of £15 10*s.* 6*d.* per share. Altogether the paid-up capital at March 31 last amounted to £2,254,699, as compared with £2,269,690 twelve months previously. Twelve months ago the reserve fund amounted to £1,375,000, but by the addition of the premium received on new shares at March 31 last it reached a total of £1,915,536. A further £84,464 was transferred from the profits of the year, bringing the reserve fund up to the round figures of £2,000,000, of which £1,000,000 is invested in British Government securities. The notes in circulation have risen from £989,882 to £1,676,051, the large increase being due to bank-notes having been legal tender since the commencement of the War. Gold has been gradually withdrawn from circulation, and notes have replaced it. The deposits have risen from £18,070,613 to £18,741,657. The Government balances are somewhat less, but the deposits from the public are substantially larger. The increase in the note circulation and deposits have made prudent the maintenance of large gold reserves, and the cash has risen from £3,377,185 to £4,827,522. Similarly call money has risen from £5,076,749 to £5,136,997.

In connection with the uncalled capital of £3 6*s.* 8*d.* on the existing shares it has been agreed that, subject to the approval of the Minister of Finance, this uncalled amount shall be called up "at some opportune time" during the next seven years—viz. by November 27, 1920, at latest. The Minister of Finance in 1914 "stated that he will offer no objection, though

he, of course, pointed out that he could not bind his successor in office."

Herewith we set out the liabilities and assets for various years from 1862.

The prospectus of the Bank of New Zealand, issued in 1861, pointed out that it was proposed to establish "on a broad and permanent basis a banking institution capable of doing the present banking business of New Zealand, and susceptible of expansion with a view to meeting the requirements of that prosperous future which it is believed will certainly and shortly be realised for New Zealand. It will be the object of the Bank to render all possible accommodation and facilities consistent with its proper functions to the merchant, settler, storekeeper, and farmer." The capital suggested was £500,000, in 50,000 shares of £10 each, half of which was to be called up. For the first period to March 31, 1862, a profit of £6,097 was made, and a dividend of 6 per cent. was paid, the paid-up capital being £108,786. The new Bank had got together deposits to the extent of £371,895. For the twelve months to March 31, 1863, the profits rose to £49,880 and the dividend to 10 per cent. The deposits had increased nearly threefold, amounting to £969,488. From that time up to 1887 the dividend was mostly at the rate of 15 per cent. per annum, and on no occasion did it fall below 12½ per cent. During this period the paid-up capital was increased to £1,000,000, while the reserve fund rose to £625,000. A steady rise also occurred in the deposits, which gradually increased year by year, until at March 1887 they reached the large total of £11,271,254. Subsequently the Bank had very adverse conditions to face, and the misfortunes culminated in the loss of the whole of the capital and reserves and one-third of the reserve liability. The Government came to the Bank's assistance in 1894 and guaranteed for it a substantial amount of capital, thereby affording it an opportunity to nurse its unliquid assets until they could be realised advantageously. An Assets Realisation Board was formed and the Bank reconstituted by legislative authority upon a basis which afforded good prospects of its eventually working out of its difficulties, and, aided by the acquisition of the business of the Colonial Bank, it commenced slowly to retrieve its fortunes. And by 1906 it was found that surplus profits paid over by the Bank to the Assets Realisation Board aggregated £1,247,699, which, combined with the results of working and the proceeds of property realisations, effected equilibrium in that Board's position, and accordingly the Board was dissolved, the remaining properties, valued in the books at £461,047, were handed over to the Bank, and the Board's Debentures held by the Bank were surrendered and cancelled. In 1907 the deposits amounted to £12,909,160. By 1910 they had risen to £14,687,680. After a further increase to £17,886,746 in 1911, a falling-off to £15,833,867 occurred in 1912; but during the twelve months to March 31, 1913, a turn in the upward direction once more occurred and the deposits reached a total of £16,414,640.

As already pointed out, the deposits now reach a total of £18,741,657.

From 1902 to 1906 a dividend of 5 per cent. was paid, but with the dissolution of the Assets Realisation Board it became possible to increase the rate of dividend, and accordingly for the twelve months to

SIR GRIFFITH THOMAS.
ERNEST DENT VAISEY, Esq.

G. A. HARVEY and E. D. VAISEY, Joint General-Managers.

Head Office: 39 THREADNEEDLE STREET, LONDON.

Telegraphic Address, "ELMFIELD STOCK, LONDON."

Current Accounts opened in London on terms usual among London Bankers.

Deposit Receipts issued and Deposit Accounts opened in London, interest being allowed thereon at rates as advertised from time to time.

At the Country Branches, Current and Deposit Accounts opened, Deposit Receipts and Drafts issued, and all other Banking Business transacted on the usual terms.

Dividends and Coupons collected. Investments in and Sales of Home and Foreign Securities effected. Moneys received and advised for customers free of charge between all the offices.

The Bank has Agents throughout the United Kingdom, to whom credits can be paid by or on behalf of its customers for transmission.

The Agency of Foreign, Colonial and Country Banks is undertaken.

The Bank is prepared to undertake the duties relating to Executorships, Trusteeships, &c.

The Officers of the Bank are bound to secrecy.

FOREIGN DEPARTMENT.—The Bank issues Drafts, Circular Letters of Credit and Circular Notes payable in all parts of the World; effects Mail and Cable Transfers; collects Foreign Bills and Bonds; purchases approved Foreign Bills and Coupons payable abroad; receives Foreign Bonds and Scrips for registration; makes arrangements abroad for receiving moneys for its customers, and undertakes generally all Foreign Exchange Business.

March 31, 1907, 10 per cent. was paid on the Ordinary shares after 7½ per cent. had been paid on the Preference shares. These rates were repeated for the following year. Then ensued two payments of 8¾ per cent. on the Preference shares and 12½ per cent. on the Ordinary shares. For the jubilee year of the Bank—namely, the twelve months to March 31, 1911—the distribution was raised to 10 per cent. on the Preference shares and to 15 per cent. on the Ordinary shares, and these rates have been maintained for the past four years.

The gross profit for the twelve months to March 31, 1915, amounted to £755,240, as compared with £714,076 for the previous year. After providing for expenses the net profit has amounted to £396,167, which compares with £388,491 for the previous year. Herewith we set out the profit statement for each year since 1904:—

* Includes £50,000 statutory payment to Assets Realisation Board.
† Surplus to be paid over to Realisation Board.

The proportion that the shown net profit for the past year bears to the paid-up capital is 17.5 per cent., to the capital and reserve combined 9.5 per cent., and to the total working resources 1.5 per cent.

As regards the outlook, Mr. H. Beauchamp, the Chairman of the Bank, spoke as follows at the meeting on June 18 last:—"I think we may look for a continuance of good trade. The end of the War may be followed by heavy taxation and unemployment in those countries now engaged in hostilities, but New Zealand is still bound to find an outlet at remunerative prices in Great Britain, the Continent of Europe, and the United States of America for her wool, frozen meat, dairy produce, &c. It would, of course, be unreasonable to expect the abnormal rates at present ruling for the articles enumerated to be maintained, but there is little doubt that the demand which will then exist for our primary products will enable us to face the future with equanimity, and assist us in discharging the heavy liabilities we have directly undertaken in connection with the War. . . . Already the trade of Australia and New Zealand with the United States of America and Canada has taken a forward bound, largely encouraged by the opening up of the Panama Canal. Large shipments of wool and concentrates have been made from New Zealand and Australia to Boston and other American ports. Wellington will be a frequent port of call—for coaling and other purposes—on this new trade route. The trade with the United States is bound to develop, and it is the duty of our merchants to help in the development, at the same time taking care that the pernicious American system of combines and monopolies is not allowed to obtain a footing. Trade with Canada, too, is destined to grow, and it is not unlikely that closer political relations will be established with the sister Dominion after the close of the War. China and Russia are, commercially speaking, lands almost unknown to these islands, but it is fairly certain that they will not long remain so; and when we come to reflect upon their immense populations and their boundless resources, the trade possibilities opened up appear to be illimitable.

BANK OF NORTH QUEENSLAND, LTD.

Head Office: Queen Street, Brisbane.

London Office: 4 Queen Victoria Street, E.C.

Capital—

Authorised, 100,000 Shares of £7 each ...	£700,000
Subscribed, 50,000 Shares	350,000
Paid up, £3¼ per Share	162,500

Price of Share, 3¼. *Dividend*, 6½%. *Yield*, £6 10*s.* %

This Bank was established in 1888 under the Queensland Companies Acts with a capital of £500,000, in shares of £10 each, of which £5 per share was paid up. In May 1893, as a consequence of the crisis, the Bank suspended payment, but reconstructed without liquidation, business being resumed about the end of July in that year. Under the scheme of arrangement £1 per share was written off, while in 1899 a further £2 per share was similarly dealt with, reducing the subscribed capital to £350,000 in shares of £7 each, with £100,000 paid up, or £2 per share. The remaining £5 per share is reserve liability. Within two years of 1893 all deferred deposits were paid in full. The capital remained at £100,000 until 1912, but in consequence of the increase of business it was decided to make a call of 25*s.* per share, thereby increasing the paid up capital to £162,500.

At the end of 1914 the reserve fund was brought up to £35,000, at which figure it still stands. At June 30 last the deposits amounted to £1,134,157, as compared with £1,046,290 at June 30, 1914, the increase occurring in the fixed deposits. Cash balances amounted to £393,425, as compared with £378,598. The advances amounted to £815,190, as compared with £770,666. During the first half-year, owing to the increased export of meat, prices for cattle were high, while the Continental demand for wool having weakened, the prices declined. The long dry spell that extended throughout the Southern States was responsible for the failure of the wheat crop. Fortunately for Queensland, however, the sugar-cane harvest afforded a generous tonnage to the farmers. During the second six months, in spite of the continuance of the War and the drought generally, banking business continued fairly satisfactory. Herewith we set out details of the liabilities and assets of the Bank for each year since 1905.

A substantial increase in profits is shown by the Bank during the past nine years. For 1906 the gross profits amounted to £26,373 and the net profit to £4,940, the dividend being 2½%. By 1910 the gross profit rose to £44,413 and the net profit to £9,215, while for 1913 the gross profit amounted to £62,853, the net profit reaching £16,782, and a dividend of 7% was paid. For 1914, while the gross profits rose to £67,300 the expenses rose from £46,071 to £51,326, so that the net profit at £15,974 was slightly less The dividend was reduced to 6½%, while a sum of £5,000 was carried to reserve fund, bringing it up to £37,500. Herewith we set out the profit record for each year since 1906:—

Profits of the Bank of North Queensland, Ltd., since 1906.

Year ended Dec. 31	Gross Profits.	Salaries and Other Expenses.	Net Profit.	Dividend. Amount.	Dividend. %	Contingency Account.	Carried Forward.
	£	£	£	£		£	£
1914 ...	67,300	51,326	15,974	10,562	6½	5,000	3,175
1913 ...	62,853	46,071	16,782	11,133	7	7,500	2,763
1912 ...	54,858	41,684	13,174	6,917	6	5,000	4,614
1911 ...	49,625	39,759	9,866	5,500	5½	4,000	366
1910 ...	44,413	35,198	9,215	5,000	5	5,000	2,990
1909 ...	40,774	32,142	8,632	5,000	5	—	3,776
1908 ...	34,404	26,937	7,467	4,500	4½	4,500	145
1907 ...	30,409	24,254	6,155	4,000	4	4,000	1,679
1906 ...	26,373	21,433	4,940	2,500	2½	—	3,524

The proportion that the shown net profit for 1914 bears to the paid-up capital is 9.8 per cent., to capital and reserve combined 8.1 per cent., and to the total working resources 1.2 per cent.

BANK OF NOVA SCOTIA.

Head Office: Halifax, Nova Scotia.

Capital—

Authorised $10,000,000

Paid up, 65,000 Shares of $100 each ... 6,500,000

Price of Share, $261. *Dividend,* 14%. *Yield,* £5 8*s.* 7*d.*

THE Bank of Nova Scotia, which was incorporated in 1832, has its head offices at Halifax, Nova Scotia, while the General Manager's office is at Toronto. The first report issued, in 1833, showed that the paid-up capital was $200,000, the note circulation amounting to $66,454. The Bank had received $75,775 on deposit, and the total assets were $343,473. At the end of last year the capital paid up was $6,500,000.

The most noteworthy feature of the Bank is the very rapid growth in the reserve fund, and at the end of 1912 it amounted to $8,728,146. In February 1913 the Bank of Nova Scotia took over the Bank of New Brunswick, which had a paid-up capital of $1,000,000 and a reserve fund of $1,790,000. This sum was carried to the reserve of the Bank of Nova Scotia, and with premiums from new stock issue and allocations from profits the reserve has now been brought up to a total of

* January 31. † February 28.

$12,000,000—a sum nearly twice as large as the paid-up capital.

The note circulation at the end of 1914 amounted to $7,148,813, as compared with $5,948,022 at the end of 1913. The deposits rose from $56,185,109 to $68,955,351. On the other side, the total cash rose from $14,319,707 to $19,106,398, and the short loan money from $14,837,315 to $16,642,862. The largest increase occurred in the loans, which rose from $39,872,931 to $45,451,976. Herewith we show the liabilities and assets of the Bank for various years since its formation.

During 1914 the business of the Metropolitan Bank was absorbed, thereby adding 39 additional branches in Ontario. In addition to its business in Canada the Bank has developed an interest in Cuba and Porto Rico. The 1914 Jamaican crops were fairly good, but the high prices for sugar ruling since the outbreak of war have not been to the island's advantage, because the product had been disposed of before the advance took place; while the banana interests were prejudicially affected by the lessened demand, with consequent lower prices in the United States and the almost total cessation of shipments to Europe. The outlook for 1915 is encouraging, as growers are in a position to benefit from the high prices continuing to rule for sugar, and while there is likely to be a reduction in the quantity of bananas purchased and a continuance of the restricted demand the enhanced value of sugar will offset any shrinkage in return from bananas. Similarly with regard to Cuba, the conditions connected with the growing and marketing of sugar are satisfactory and will largely compensate for unsatisfactory conditions prevailing in other industries. Naturally, in Canada as a whole, a time of severe depression has occurred, which has been partially met by wise measures adopted by the Government. The profits of the Bank of Nova Scotia for 1914 amounted to $1,196,117, as compared with $1,210,774 for 1913. The dividend was maintained at 14 per cent., while the carry-forward was increased from $41,124 to $201,058. The profit record for each year since 1904 is appended:—

Profits of the Bank of Nova Scotia.

Year ended Dec. 30	Profit.	Dividend. Amount.	Rate.	Balance.	Reserve, Invest., Deprn., &c.	Carried Forward.

At the meeting of the Bank of Ottawa on December 16 last, the General Manager pointed out that the unexpected outbreak of war found the Canadian banks in a better state of preparedness than if it had occurred, say, two years earlier, as, for some time past, they had been endeavouring to curb speculation and undue expansion. The general result of the War, however, would be that Canada would have to learn the very necessary lesson of living more within her means and carrying on her financial operations with much reduced help by way of outside capital. "With our great resources we can surely have enough confidence to believe that in the end this course will be productive of much good by settling values on a more

permanent and stable basis, putting a stop to the unwise and unnecessary expansion, making us more self-reliant, and thus in the end enable us to look forward confidently to a substantial and solid progress towards renewed prosperity." Naturally, during 1914 the country felt the falling-off of expenditure for railway construction, owing to the practical completion of the two transatlantic lines. Crops in a large portion of the north-west were only fair, although the excellent demand and good prices helped greatly to sustain the average financial return. In the West a severe fall occurred in the value of real estate, indicating that expansion had been largely overdone. In the Western Provinces and in Ottawa the lumber business was generally in a state of depression. The measures adopted by the Finance Minister on the outbreak of war, whereby provision was made for granting aid through banks by advances on securities in Dominion notes, and the devising of other financial means for preventing undue stringency, resulted in creating a feeling of confidence in the country and in the prevention of anxiety. The profits of the Bank of Ottawa for the twelve months to November 30, 1914, amounted to $620,691, as compared with $706,741 for the previous year. The dividend, however, was maintained at 12 per cent., the rate gradually rising

* Includes premium on new stock.

The proportion that the shown net profits bear to the paid-up capital is 15.5 per cent.; to capital and reserve combined, 7.1 per cent., and to the total working resources, amounting to $53,529,921, 1.1 per cent.

The Bank of Ottawa is one of the younger Canadian banking institutions, having been founded in 1874. Its formation was largely due to the demands of the lumber industry in the Ottawa Valley. The first statement of accounts showed that the paid-up capital in 1875 was $343,875, while the deposits were $202,760. At this time it had only two offices, and the growth may be partially gauged by the rapid increase in the number of offices. For the two of 1875 have increased to 98 in 1914. Naturally, the great majority are in Ontario, in which province are to be found 65; in Quebec there are 12, in Manitoba 7, in Saskatchewan 11, in Alberta 1, and in British Columbia 2. A new issue of capital in 1913 brought the amount paid up at the end of the year to $4,000,000.

The note circulation in November 1914 amounted to $4,051,740, as compared with $4,468,075 twelve months previously. In 1900 the deposits of the Bank were $9,779,233, by 1905 they had increased to $17,969,999, and by 1910 to $32,522,084. Further expansion occurred year by year, and at November 30 last deposits amounted to $40,182,693.

BANK OF ROUMANIA, LIMITED.

Head Office: 7 Great Winchester Street, London, E.C.

Capital—

Paid up, 50,000 Shares of £6 each £300,000

Price of Share, 5. *Dividend*, 5%. *Yield*, £6 0*s.* 6*d.*%.

During the first half of 1914 normal conditions prevailed in Roumania. The Balkan war being over, it was thought that peace in that part of Europe had been secured, at any rate for some years, and with the prospect of a good harvest the outlook was considered very encouraging, and a spirit of enterprise was manifest everywhere. These optimistic hopes were shattered by the outbreak of the European war, accompanied, unfortunately, by adverse reports respecting the harvest. In some quarters there was a demand for a general moratorium, but it was not acceded to, and it was only towards the end of December that a partial step in that direction was taken by decreeing a moratorium for foreign liabilities. This was done on account of the difficulty of procuring exchange, owing, firstly, to the war, and, later on, to the closing of the Dardanelles, Roumania's principal route for the export of her produce. The receipts from the national railways for the year 1914-15 showed a decrease of £220,000, owing to the dislocation of trade, while the output of crude petroleum for 1914 amounted to 1,783,947 tons, a decrease of a little over 100,000 tons compared with the previous year. Owing to unfavourable weather the harvest did not come up to expectations. Altogether, however, it would appear that the Bank of Roumania, Limited, had made profits practically equal to those for 1913, but owing to the unprecedented level of exchange there was deducted from the profits shown, after making provision for all debts, a sum of Lei 370,400 (25 Lei equal £1) to meet losses in exchange on unmatured operations, and after writing off £6,661 from investments there is a net profit shown of £17,171, as compared with £28,070 for 1913. The dividend is at the rate of 5 per cent. as compared with 8⅓ per cent. previously paid for some years. The past 10 years' profit record is as follows:—

Profits of the Bank of Roumania, Limited.

Year ended Dec. 31	Gross Profit.	Expenses.	Net Profit.	Dividends. Amt.	Dividends. Rate.	Reserve, Deprn., &c.
	£	£	£	£	%	£

† Eight months. * April 30.

The proportion that the shown net profit bears to the paid-up capital is 5.7 per cent.; to capital and reserve combined, 3.6 per cent., and to the total working resources, .7 per cent.

Formerly known as the Bank of Roumania, this institution was established in 1866 under Roumanian laws. It was reconstituted in 1869, receiving a concession from the Government running for 35 years. The nominal capital was 25,000,000 francs, and previous to 1889 a sum of 200 francs per share had been called up. In that year a return of 50 francs per share was made to the shareholders, so that in 1903 the shares were of the denomination of 500 francs each with 150 francs paid up. The concession from the Roumanian Government expired on December 31, 1903, but owing to the impossibility of obtaining an extension of the concession under the same conditions it was decided to form a new Company under English laws with the title of the Bank of Roumania, Limited. The shares of the old Bank carried a liability of £14 per share, but on the reconstitution it was decided to make the shares fully paid of £6 each, and as no alteration has since occurred the present capital is £300,000, in £6 shares.

At the end of 1914 the deposits, &c., amounted to £1,937,150, as compared with £1,207,165 at the end of 1913. The increase in deposits is not a sterling liability, but a liability of the Bucharest branch in Roumanian lei. A large part of the increase represents the proceeds of bills, &c., collected in Roumania on foreign account. Owing partly to the high rates of exchange, and the difficulty of procuring remittances, much of this money is being left in Roumania for the time being by the owners. *Per contra*, the cash has risen from £197,213 to £797,428, while the loans, &c., have risen from £1,464,457 to £1,602,230. Herewith we set out the liabilities and assets of the Bank for various years since 1870.

Paid up... 5,000,000
Price of Share, $211. *Dividend*, 12 %. *Yield*, £5 15*s.* 5*d.*

In his speech to the shareholders of the Bank in January last, the President of the Bank of Toronto pointed out that it was fortunate for the business interests in Canada that the process of slowing down had been going on for more than a year before the outbreak of the War. There was a realisation that the time had come when money could no longer be obtained to the extent it had been available in former years, and that expenditure that had been so freely made in railway building, in the development of public utilities and municipal undertakings, must be largely reduced. The banks had all been pursuing a very conservative policy, and were steadily strengthening their resources and influencing their customers in the same direction. As a result of this conservative policy the country was in a better position to meet the shock which came when war was declared. Since the outbreak of war matters have been gradually adjusting themselves to the changed conditions, and

THE LONDON AND PROVINCIAL BANK

LIMITED.

SUBSCRIBED CAPITAL £2,000,000

* Rate of exchange, $4.867.

the business interests of the country have been protected by the banks to an extent that seemed for a short time to be beyond their power to accomplish. There are still many difficulties, however, to face. Canada has been for years past a large borrower in outside markets, and it has been almost entirely dependent upon this outside capital for the prosecution of its large enterprises. The War found the country with uncompleted works, and with the source of supply for money to complete this suddenly cut off. It has, therefore, to a large extent been cast upon its own resources, and it has been necessary to meet the new conditions that have been created. Both collectively and individually all unnecessary expenditure has been cut off, and the country has had to make available such resources as will increase its capital.

For the twelve months to November 30, 1914, the Bank of Toronto reported a profit of $829,539, as compared with $850,694 for the previous year. The dividend was maintained at 12 per cent., a sum of $100,000 was set aside for depreciation in value of investments, and $34,000 transferred to pension fund, &c., while the carry forward was increased from $307,272 to $402,811.

The profit record since 1904 is as follows:—

Profits of the Bank of Toronto.

Year ended Nov. 30	Profit.	Dividends. Amount.	%	Balance.	Premium on New Stock.	Reserve, Invest., Deprn, &c.	Carried Forw'd.

* Debts recovered, previously written off.

The proportion that the shown net profit bore to the paid-up capital at the end of the year was 16.6 per cent., to capital and reserve combined 7.6 per cent., and to the total working resources, amounting to $61,929,363, 1.4 per cent.

The Bank of Toronto was formed in 1855 and started business in July 1856. The Bank is one of the most successful of Canadian institutions. Its credit was severely and fully tested very early in its history, for in 1857 a financial crisis occurred in Toronto, following on excessive land speculation. The new Bank, however, emerged safely from the ordeal, and by so doing obtained a considerable amount of business from two banks which were less conservatively managed. The first statement of accounts, which was issued in 1857, showed that the paid-up capital was $415,800, while a reserve fund of $23,300 had been set aside. The total deposits amounted to $263,100. By 1870 the paid-up capital had increased to $800,000, while a reserve fund of $415,000 had been accumulated. At November 30, 1912, the paid-up capital was $5,000,000, and it still stands at this figure.

As far back as 1903 the reserve fund exceeded the paid-up capital, and by November 30, 1912, it was $1,000,000 in excess of the paid-up capital, amounting to $6,000,000, at which figure it still stands. The figures of the balance sheet of November 30, 1914, showed comparatively little change as compared with those of the previous year, the deposits then standing at $44,925,000. The steady and satisfactory growth of the Bank may be seen from the statement herewith setting out the liabilities and assets for various years since the formation of the institution.

For 1914 the Bank of Victoria, Limited, showed a profit very closely approximating that for 1913, so that the net profits were £124,323, as compared with £125,952. It was considered desirable in consequence of the War and the drought to reduce the dividend, so that the distribution for the year on both the Preference shares and the Ordinary shares was 5½ per cent., as compared with 6 per cent. for the previous year. A sum of £20,000 was carried to the reserve fund, and the carry-forward was increased

The proportion that the shown net profit for 1914 bears to the paid-up capital is 8.4 per cent., to capital and reserve combined 6.8 per cent., and to the total working resources, amounting to £8,981,219, 1.4 per cent.

The Bank of Victoria, Limited, dates back originally to 1852, when it was incorporated by Act of Colonial Council in October of that year with a capital of £1,000,000, in £50 shares having £25 each paid up. In May 1889 the Bank was registered as a limited Company under the Victoria Act of 1864, and each of the £50 shares was then exchanged for five new shares of £10 each with £5 paid up. In August of the same year the capital was doubled, making it

Dividends, Pensions and Annuities received for Customers of the Bank.
The Bank undertakes all classes of Foreign Business, including the collection of Foreign Bills and the remittance of moneys abroad.
Circular Notes, Circular Letters of Credit and Fixed Letters of Credit issued, payable in the principal Cities and Towns of the world.
The Bank undertakes the office of Executor and Trustee on terms, particulars of which may be obtained at Head Office and Branches.

£2,000,000, in £10 shares, and of these 120,000 shares were issued with £5 paid up, making the total paid-up capital £600,000. In consequence of the crisis of 1893 the Bank was reorganised with a subscribed capital of £2,816,560. Of this amount in December 1893 the sum paid up was £1,081,452. This was divided into £416,560 of Preference shares and £664,892 of Ordinary shares. The present capital authorised is £3,240,000, in 240,000 Ordinary and 84,000 Preference shares of £10 each. The amount paid up at December 31 last was £416,760 of Preference shares and £1,061,250 of Ordinary shares. The Preference shares are fully paid, while the Ordinary shares are £5 paid, thus leaving a further liability of £5 per share. The Preference shares are entitled to a non-cumulative dividend of 5 per cent. and to rank equally with the Ordinary shares in any surplus after the latter have received 5 per cent.; they also carry priority as to capital, with further participation after repaying the Ordinary shares, "but if and so soon as the Company shall have paid to the holders of Preference shares 10 half-yearly dividends, each at the rate of at least 7 per cent. per annum, and also if and when the Ordinary shares shall be fully paid up," this priority for capital shall cease.

Since 1900 the paid-up capital has remained unchanged, but additions have been steadily made to the reserve fund, and on June 30 last it reached £365,000.

In the table herewith we set out the liabilities and assets for various years since 1862.

The changes in the balance sheet at June 30 last, as compared with June 30, 1914, are of a comparatively small amount, the Government deposits standing at £656,220 and the other deposits at £6,084,804. The acceptances fell from £400,221 to £195,967, and bills in circulation from £534,709 to £392,189.

BANQUE D'HOCHELAGA.

Head Office: Montreal.

Capital—

Authorised and Paid up, 40,000 Shares, $100 each $4,000,000

Price of Share, $149. *Dividend*, 9%. *Yield*, £6 2*s.* 3*d.*%.

In spite of the disturbed business conditions caused by the War the Banque D'Hochelaga was able to report a profit for the twelve months to November 30, 1914, of $566,614, as compared with $534,700 for the previous year, an increase of $31,900. The dividend was maintained at 9 per cent., but in consequence of an increase in capital becoming fully paid the amount required was $360,000, as compared with $270,000 for the previous year. A sum of $100,000 was carried to the reserve for depreciation of investments, and $75,000 was added to the reserve fund, while other allocations absorbed $16,000. The carry-forward was increased from $27,562 to $43,176. The profit record since 1904 is as follows:—

Profits of the Banque D'Hochelaga.

* Including interest on instalments of capital issued in 1912, $31,117.
† Eighteen months to Nov. 30.
‡ Year to May 31.

The proportion that the shown net profit bears to the paid-up capital is 14.1 per cent., to capital and reserve combined 7.3 per cent., and to the total working resources 1.7 per cent.

Last year the Banque D'Hochelaga celebrated 40 years of existence, inasmuch as it was formed in 1874. Its operations are confined almost entirely to Eastern Canada, though lately the Bank has shown a tendency to extend its field of operations further west, and in 1913, for example, two branches were opened in Alberta and one in Saskatchewan; but as the name implies, the Bank chiefly operates among the French Canadians in the Eastern Provinces, chiefly in Quebec. The City of Montreal is well covered with offices, every ward but one in the city having a branch. Altogether the Bank has 87 branches, and of these 35 are in Montreal. Its history has been an uneventful one, but steady growth has been witnessed since its formation. In 1901 the paid-up capital was $1,500,000, and the reserve amounted to $770,000. In the following year the capital was increased to $2,000,000, at which figure it remained until 1907, when it was brought up to $2,500,000. In 1912 it was increased to $3,000,000, and in 1913 to $4,000,000. At November 30, 1914, with a paid-up capital of $4,000,000, the reserve fund amounted to $3,700,000.

The notes in circulation amounted to $3,319,072, while the deposits rose to $21,293,483. Herewith we set out the progress of the Bank as shown in the accounts for various years since 1901.

LA BANQUE NATIONALE.

Head Office: Quebec.

Capital—
Authorised $5,000,000
Paid up, 20,000 Shares of $100 each ... 2,000,000
Price of Share, $131. *Dividend*, 8%. *Yield*, £6 4s.

The disturbance to financial affairs in Canada shows very little reflection in the accounts of La Banque Nationale, which is able to report a profit of $313,207 for the twelve months to April 30, 1915, as compared with $319,903 for the previous year. The dividend is maintained at 8 per cent., while a sum of $100,000 is carried to reserve fund, $50,000 is written off as depreciation on securities and for contingencies, $10,000 is carried to pension fund, and $7,500 to patriotic fund. The carry-forward amounts to $48,007. The profit record since 1905 is as follows:—

Profits of La Banque Nationale.

The proportion that the shown profit bears to the paid-up capital is 15.6 per cent., to capital and reserve combined 8.3 per cent., and to the total working resources 1.2 per cent.

La Banque Nationale was established in 1860. It has a branch in Paris, while in addition to 69 offices in Canada there are 102 sub-agencies, and almost without exception both branches and sub-agencies are in the Province of Quebec. The Bank is thus very largely a French-Canadian institution.

With a paid-up capital of $2,000,000 the Bank had accumulated a reserve fund at April 30 last of $1,800,000. The deposits amounted to $19,433,064. Herewith we set out the liabilities and assets of the Bank for various years since 1895.

At the annual meeting in June last the President pointed out that "Our circulation at $3,140,000 exceeds the normal authorisation of the law by $1,140,000. This excess in the issue of our paper money, permitted by the law under certain conditions, would be profitable to us only if our capital was larger, as we are obliged, for each dollar of over-circulation, to deposit the equivalent in gold, or to pay 5 per cent. interest on each dollar of such excess of circulation, if we wish to take as a basis the 15 per cent. of the capital and of the reserve that the law allows us. A large paid-up capital would enable us to profit of the chief advantage that the law grants to banks. Our actual organisation justifies us to estimate a maximum circulation of $4,000,000. Although we have your authorisation to issue new stock we have thought it wiser to abstain from it and to wait for less troubled times."

THIS Bank is one of the youngest of banking institutions, having been formed under the title of the Anglo-Russian Bank, Limited, in January 1911, by a combination of English and Russian capitalists, with the primary object of acquiring an interest in the Russian Commercial and Industrial Bank of St. Petersburg, with about 100 offices and agencies throughout Russia. The prospectus pointed out that "the Empire of Russia offers a splendid field for the investment of capital. The construction of new railroads, harbours and docks, the development of waterways, irrigation works, the introduction of improved systems of water supply and drainage, electric lighting and other public works, now under contemplation will justify the raising of a large amount of capital by issues of Government guaranteed, municipal, and other loans. These issues will afford opportunities for profitable transactions of the first importance, in which the Russian Commercial and Industrial Bank and the Anglo-Russian Bank, Limited, may expect to participate." The capital of the Russian institution rose from £1,058,201 in 1900 to £1,587,302 in 1909, the profits rising during the same period from £39,830 to £205,206, and the dividend from 3.6 per cent. to 9 per cent. The first report, which covered the period from the incorporation of the Bank on January 19, 1911, to April 30, 1912, showed that with a paid-up capital of £1,200,000 deposits of £1,163,946 had been secured. On the other side of the accounts, the amount of the investment in shares of the Russian Commercial and Industrial Bank amounted to £1,230,000 out of total assets valued at £2,442,368, while the loans and discounts reached a total of £794,891. The profits for the period amounted to £81,593, expenses being £10,171. A dividend of 5 per cent. was paid, and after writing down bank fittings account there was carried forward a sum of £10,825. This did not include a dividend on the Russian Commercial Bank shares for 1910 of £52,684, which was applied for the purpose of writing down the preliminary expenses, leaving them standing at April 30, 1912, at £8,678. In October 1912 it was decided to change the name from the Anglo-Russian Bank to the British Bank for Foreign Trade, Limited. The second report showed that while the paid-up capital remained unchanged at £1,200,000, current deposits and other accounts had risen to £2,471,763. On the other side, the interest in the Russian Commercial Bank remained unchanged at £1,230,000, but the investment in Russian Government guaranteed bonds and other securities at cost rose from £215,859 to £730,453, and the loans and discounts from £794,891 to £1,563,133, the total assets amounting to £4,191,731.

Naturally, the outbreak of war led to restriction of the business in 1914-15, and at April 30, 1915, the deposits were only £1,911,922, as compared with £2,318,079 at April 30, 1914; similarly bills payable fell from £220,985 to £128,157, and the acceptances from £490,203 to £99,293. On the other side, the cash was £206,020, as compared with £260,904, while the investments rose from £2,116,498 to £2,387,405, and the loans, &c., fell from £1,336,858 to £530,029. Herewith we set out a comparison of the liabilities and assets for each year since the start.

Naturally, the net profits have suffered during the past twelve months, and no dividend has been received upon the shares of the Russian Commercial and Industrial Bank for the year ending January 13, 1915. The sum received in the previous year as dividend on these shares was £80,518; the net profit is £786, and naturally no dividend is possible. The net profit is added to the carry-forward, bringing it up to £10,667. Herewith we set out the manner of dividing the profits for each year since the establishment of the Bank:—

Year ended April 30—	1915	1914	1913	1912
	£	£	£	£
Gross profit	110,238	110,075	119,068	81,592

Dividend	Nil	72,000	72,000	60,355
	—	(6%)	(6%)	(5%)
	786	24,804	34,076	11,066
Reserve, &c.	—	25,594	34,229	242
	786	—790	—153	10,824
Brought forward	9,881	10,671	10,824	—
Carried forward	10,667	9,881	10,671	10,824

At the meeting in June last the Chairman pointed out that "No less than 4,152,585 roubles was written off against protested bills and as provision for depreciation of securities. This sum was not to be taken, as far as he was at present advised, as a realised loss, but represented the reduced value at which certain assets were carried into the balance sheet at the beginning of the year. Many persons who should be competent to forecast the future predicted that Russia would, when fighting ended, recover very rapidly from the effects of the War, and that every department of Russian commerce and finance would boom. The Russian nation, like ourselves, was involved in a supreme struggle, which would cost, apart from the sacrifice of human life, untold treasure. But Russia's national resources were being organised so as to preserve the trade and institutions of the Empire, and he had every reason to think that the Russian Bank, in which they had so much capital embarked, would emerge triumphantly from the shadow which German aggression had cast over a part of Russia and over all Europe."

The British Bank of Northern Commerce is one of the youngest of banking institutions, inasmuch as it only dates back to February 1912, the principal object being to facilitate commercial intercourse between the northern countries of Europe and Great Britain. The authorised capital was fixed at £2,000,000, and the first report, which was dated March 31, 1913, showed that the subscribed capital consisted of 110,007 shares of £10 each, making a total of £1,100,070. There had been paid up £2 10*s.* per share, making a total of £275,017. Moreover, a similar amount represented the reserve fund, secured by allotting the new shares at a premium. The Right Hon. Earl Grey, G.C.B., is Chairman. At the statutory meeting on March 26, 1912, Earl Grey expressed the hope that the establishment of the Bank might be a means of bringing additional business to the City of London by stimulating trade between England and the northern countries, to the mutual and reciprocal benefit of all concerned; and in referring to England he said that he made that an inclusive term which would embrace other parts of the British Empire, especially not forgetting Canada. Twelve months later Earl Grey successfully claimed that the hope to which he had given expression had been realised, "and it is with great pleasure that I am able to state that our Bank has been well received not only in the northern countries of Europe, but in the United Kingdom and elsewhere. There has been no attempt or desire on the part of this Bank to take away business from any of the existing institutions, and we are fortunate in the many practical evidences of goodwill and friendly feelings we have received from all sides." The first accounts covered the period from February 2, 1912, to March 31, 1913, for which period a gross profit of £66,836 was reported, the net profit amounting to £22,641, which enabled the payment of a dividend at the rate of 6 per cent. per annum, free of income tax, absorbing £16,501, and leaving a balance to be carried forward of £6,140. The second accounts showed an increase in the gross profit to £93,220, the net amount reaching a total of £41,382. It was decided, therefore, to increase the dividend to 10 per cent., the carry-forward rising to £10,022.

For the twelve months to March 31, 1915, the gross profits amounted to £94,032, the interest paid rose from £25,317 to £31,141, while expenses rose from £24,198 to £29,934. Consequently the net profit fell from £41,382 to £32,957. The dividend was reduced from 10 per cent. to 8 per cent., and the surplus of £2,957 was added to the carry-forward, bringing it up to £12,979. Herewith we set out the profits since formation:—

The proportion that the shown net profit bears to the paid-up capital is 8.8 per cent., to capital and reserve combined 4.4 per cent., and to the total working resources 1.0 per cent.

The paid-up capital now amounts to £375,000, and the reserve fund to the same figure. Naturally the business of the Bank has suffered from the War. Deposits have fallen from £1,243,996 to £1,048,790, while the acceptances have fallen from £2,716,386 to £1,332,097. On the other side of the accounts, the cash has risen from £251,424 to £272,274, while call money has dropped from £419,775 to £50,000. The investments have risen from £121,898 to £387,190. Herewith we append a summary of the balance sheet for each year since formation.

At the annual meeting in May last Earl Grey pointed out that, "As you are well aware, the original object of our Bank was to establish an institution which should promote close and direct financial relations between this country and Scandinavia and Russia. A large proportion of the business with those countries was formerly arranged through the medium of the German banks in London, and we believed that it would be preferable that the trade between this country and the Northern States of Europe should be transacted through an English bank, entirely owned and controlled by shareholders of Great Britain and the northern countries. The present position and prospects of our Bank confirm the opinion we then formed. It will be of interest to shareholders to know that the Company's register of members does not contain the name of one single enemy shareholder, either resident in this country or abroad, and that we have practically no commitments with the enemy countries. We look forward after the War to a considerable increase in business between this country and Russia and Scandinavia. Although our money-earning capacity was reduced, during the earlier period of the War, through dislocation of trade and exchange, the business we are now doing justifies the belief that a result of the War will be to bring our Bank a considerable increase of regular and legitimate business."

BRITISH BANK OF SOUTH AMERICA, LIMITED.

As the Bank of British South America was founded in 1863, its jubilee was celebrated in 1913. The original title of the Bank was the Brazilian and Portuguese Bank, Limited, and the first balance sheet showed that the paid-up capital was £250,000, while the deposits accumulated amounted to £104,605. There were also bills payable amounting to £66,833, the total of capital and liabilities amounting to £425,656. The assets consisted of £218,988 of cash and £206,668 of bills receivable, discounts, &c. In March 1866 it was decided to change the name to the English Bank of Rio de Janeiro, Limited, the actual change being made in December of that year. In 1891 the Bank sold the goodwill and assets of its business in Brazil for Rs. 45,00,000, or £875,000, to a local institution, the Banco de Credito Universal. At the same time the full right to carry on business in Brazil was repurchased from the same institution for £75,000. The net result of the transaction was a profit of £205,427, while it also decided to change the name to the more comprehensive title of the British Bank of South America, Limited. The Bank at the present time has branches in Bahia, Rio de Janeiro, Sao Paulo, Monte Video, Rosario de Santa Fé and Buenos Ayres. The paid-up capital remained unaltered until 1907, during which period the deposits had risen to over £5,000,000. It was consequently then decided to increase the capital to provide for further possible extensions, and accordingly, in March 1907, the authorised capital was increased to £1,500,000, and by the end of the year the amount paid up was increased to £650,000. In March 1911 a further 10,000 shares were issued, making the paid-up capital at the end of the year £750,000. As the business further rapidly increased, in March 1912 it was decided to increase the authorised amount to £2,000,000, the amount paid up at the end of the year amounting to £1,000,000. By 1871 a reserve fund of £120,000 had been accumulated; steady additions were made to this fund year by year, and it gradually rose until at the end of 1909 it amounted to £650,000, the same figure as the paid-up capital. Since then substantial additions have been made to the fund, until at December 31, 1912, it was brought up to £1,100,000, or £100,000 in excess of the paid-up capital. In view of the condition of affairs in the countries where the Bank's interests chiefly lie and the wide-reaching effects of the War, the directors considered it prudent at the end of 1914 to make large provision for bad and doubtful debts and contingencies, thereby causing a considerable decrease in profits; and for the same reasons they provided fully for depreciation in securities by transferring a sum of £100,000 from the reserve fund, thereby reducing it to £1,000,000, but still leaving it equal in amount to the paid-up capital. Naturally, the adverse conditions brought about a reduction in business, and the deposits, which at the end of 1913 amounted to £10,751,158, fell at the end of 1914 to £8,368,677. Similarly, bills payable and acceptances dropped from £6,312,516 to £3,696,482. On the other side of the accounts, bills receivable dropped from £7,449,964 to £4,964,849, and advances from £8,066,044 to £5,791,725. The total assets fell from £19,449,679 to £14,311,683. Herewith we set out the liabilities and assets of the Bank for various years since its formation, thus showing the substantial growth.

Further proof of growth is shown in advancing profits. Taking a 10 years' period, we find that the gross profit rose from £156,886 for 1903 to £466,051 for 1912. In other words, the profits for 1912 were three times those for 1903. The proportionate growth in net profits is even greater, inasmuch as they rose from £53,374 for 1903 to £268,348 for 1912. For 1913, owing to trade depression in Brazil, the gross

profits dropped back to £412,799. On the other hand, the expenses rose to £204,668 and the taxes to £22,916, so that the net profit fell to £185,215, as compared with £268,348. The dividend was maintained at 17 per cent., while £10,000 was carried to pension account, £4,500 written off investments, and £84,500 carried forward, as compared with £83,785 brought in.

We have already pointed out that owing to the necessity of making substantial provision for contingencies the profit for 1914 has been reduced. It has amounted to £343,724, as compared with £412,799. A reduction of only £4,000 took place in expenses, so that after providing for taxes the net profit was £120,197, as compared with £185,215. In the circumstances it is not surprising that no bonus is forthcoming, and the distribution consists, therefore, of the usual dividend of 12 per cent., which the net profit shown is just able to provide.

The profit record since 1904 shows the following substantial growth:—

* Free of income tax.

The proportion that the shown net profit bears to the paid-up capital is 12.0 per cent., to capital and reserve combined 6.0 per cent., and to the total working resources .9 per cent.

At the meeting in April last the Chairman spoke as follows in the course of his speech: "I was rash enough last year to express a hope that there were some indications of recovery from the depression that had for some time past weighed on business conditions in Brazil and Argentina. As regards Brazil, it was generally understood that arrangements were on the point of completion which would have placed the finances of the Government in a sounder position, and had these arrangements been carried out they would undoubtedly have had a beneficial effect. But, as you know, the outbreak of war convulsed trade and finance throughout the world, and neither in Brazil nor Argentina were conditions favourable for meeting the storm. The dislocation and practical suspension of credit that ensued had a paralysing effect, and the serious fall and violent fluctuations in the rate of exchange in Brazil, which may be taken as a trustworthy barometer of the financial conditions of that country, were indisputable indications of the state of anxiety and want of confidence that prevailed. As bearing out what I have said I will just give you one or two quotations. For some years the rate of exchange had remained practically steady at 16*d.* to 16½*d.* On August 1 last it fell to 14⅛*d.*, and continued to decline until October 2, when it reached 10½*d.*; it then rapidly recovered, touching 15½*d.* on October 20, since when it has fluctuated between 15½*d.* and 12½*d.*, yesterday's quotation being 13*d.* When you consider that a variation of 1*d.* in the rate of exchange represents about 7 to 8 per cent., taking the present rate as a basis, it is obvious that it introduces so much uncertainty into all business with outside countries that it upsets all calculations, of what would otherwise be sound and prudent transactions, and equally makes it difficult for banks, through whose intermediary they are financed, to meet the requirements of their customers without running risks that are incommensurate with the small turn of profit that they would legiti-

mately derive from them. In Argentina, where there has also been a period of serious depression and financial stringency, the outbreak of war caused a further great contraction of credit and curtailment of business facilities, and it can hardly be said that there has, as yet, been any marked recovery in the value or saleability of properties or securities. At the same time, the staple products of the country are finding ready and remunerative markets, and, with a harvest now in progress which is certainly considerably better than that of last year, we think that the outlook is decidedly more encouraging."

The original charter granted to the Canadian Bank of Commerce was obtained in 1858. An Act of incorporation for a Bank to be called the Bank of Canada was assented to by the Governor-General. In the first clause of the Act it is claimed that "it would be conducive to the general prosperity of the country thereabouts and greatly facilitate and promote the agricultural and commercial growth of the said locality," the proposal being to establish the Bank in the City of Toronto. The capital under the Act was to be $3,000,000, in shares of $50 each, and it was enacted that the Bank should start business as soon as the sum of $1,000,000 was subscribed. Apparently, however, it was not found possible to raise the sum required, and accordingly in 1866 the Act of incorporation was amended and the original charter was purchased by another Company, while the title was changed from the Bank of Canada to the Canadian Bank of Commerce. The authorised capital was altered to $1,000,000, divided into 20,000 shares of $50 each, and in place of the original sum of $1,000,000 required to be subscribed it was enacted that the Bank should begin its business as soon as $400,000 should have been subscribed and a sum of not less than $100,000 paid up. The Bank soon got to work, and in April 1867 a first general meeting of shareholders was held for the purpose of electing seven directors. In a month's time the first branches of the Bank were opened in London (Ont.), St. Catharines, and Barrie, while on May 15, 1867, the Bank was opened for business in Toronto. In November of the same year a declaration of a first dividend was made, which was payable on January 2, 1868, and was at the rate of 8 per cent. per annum for a period of 7½ months.

The first statement of affairs was dated June 30, 1868, and showed that the Bank had a paid-up capital of $916,359, the circulation was $702,388, and the deposits amounted to $1,305,681. Since then the capital has been increased from time to time as business has expanded or other banks have been judiciously acquired until the authorised amount now reaches the large total of $25,000,000, while the subscribed capital and the amount paid up is $15,000,000.

The rapid growth of the Bank may be seen from the increase in the deposits. In June 1868 the total deposits amounted to $1,305,681; by 1870 they rose to $3,489,677; in 10 years they expanded to $11,289,538. In the 10 years between 1880 and 1890 growth was very slow, but by 1900 the deposits reached a total of $29,682,038. In the following five years they rose to $74,373,920, while by the end of 1910 an increase to $126,836,733 occurred. At November 30, 1911, the deposits amounted to $145,967,756. An increase of nearly $52,000,000 occurred during 1912, partly as a result of expansion of the Bank's own business and partly owing to the acquisition of the Eastern Townships Bank, and at November 30, 1912, the deposits totalled $197,623,892. The Eastern Townships Bank was responsible for $19,000,000 of the increase, and of the balance there was a considerable accession of special amounts, which have since been withdrawn.

The result of the acquisition of these various businesses during recent years, whereby the field of operations of the institution has been greatly enlarged, is a substantial increase in the number of offices opened, the number having trebled in a period of 10 years. In 1903 the number of offices was 112; by 1907 it had increased to 184; by November 30, 1911, it further rose to 245; while at the present time it is 379, the greatest number being in Quebec and Ontario, each of which has 82 offices, while Saskatchewan comes third with 57. The distri-

At November 30 last the total deposits were $181,511,541, as against $192,816,382 at November 30, 1913. Similarly, on the other side of the accounts the loans and discounts fell from $157,216,467 to $145,616,892. There was an increase of nearly $2,000,000 in call and short loans, which rose from $25,764,911 to $27,677,386. The cash showed a falling-off of nearly the same amount, reaching the sum of $37,554,493, as against

Head Office : 54 & 56 RUE DE PROVENCE, PARIS.
LONDON Office : 53 OLD BROAD STREET, E.C.
West End Branch : 65 REGENT STREET, W.

London Manager : C. LAUDOUR. Sub-Managers : R. DUCHON-DORIS and A. J. BLAIKLEY.

OVER 1,100 BRANCHES IN FRANCE AND NORTH AFRICA.

SUBSIDIARY BANKS in Belgium, Greece, Russia, Spain, Switzerland, Turkey, Argentina and Brazil. Correspondents in all parts of the World.

This Bank transacts every description of English and Foreign Banking business, including the sale of Drafts, Telegraphic Transfers and Circular Letters of Credit and Notes payable in Allied or Neutral Countries. It also undertakes the purchase and sale of Stocks and Shares on the London and Continental Exchanges, the collection and cashing of Dividends, Coupons, Bills of Exchange, Drawn Bonds, arrangements for Documentary Credits, &c., &c.

The West End Branch has been specially fitted with Safe Deposits for the use of Customers. This Office buys and sells Foreign Exchange and Securities.

$39,940,311, while the investments amounted to $21,191,247, as against $23,957,819. Herewith we show the growth of the institution, giving the liabilities and assets for various years from the start.

A dividend at the rate of 8 per cent. per annum was paid for the year from May 15, 1867, to June 30, 1868. This rate was maintained for a number of years, and subsequently was followed by distributions of 10 per cent.; but in 1876 the rate was reduced to 8 per cent., and in 1886, in consequence of a prolonged period of depression, it was decided to reduce the rate from 8 per cent. to 7 per cent. This rate was maintained until 1906, when the dividend was once more increased to 8 per cent. As a result of the satisfactory business during 1910 the dividend was further increased to 9 per cent. Naturally, sharing in the continued prosperity of the Dominion, a substantial increase in profits occurred during 1911, which permitted of the dividend being raised to 10 per cent. During 1912, with a continuance of the general state of prosperity, the dividend was placed on an 11 per cent. basis. In 1913 the rate was raised to 12 per cent.

The reduction in profits for the twelve months to November 30, 1914, was comparatively small in amount, the profit reaching $2,668,233, as compared with $2,992,951. It was, consequently, possible to maintain the dividend at 12 per cent., which called for $1,800,000, while the carry-forward was substantially increased from $384,530 to $1,117,763.

The profit record since 1904 is as follows:—

Profits of the Canadian Bank of Commerce.

Year ended Nov. 30	Profit.	Dividends.— Amount.	% of Total.	Balance.	Reserve, Deprn., &c.	Carried Forward.
	$	$	%	$	$	$
1914 ...	2,668,233	1,800,000	12	868,233	135,000	1,117,763
1913 ...	2,992,951	1,800,000	12	1,192,951	1,580,000	384,530
1912 ...	2,811,806	1,568,622	11	1,243,184	3,317,180	771,579
1911 ...	2,305,409	1,057,219	10	1,249,190	3,212,820	203,395
1910 ...	1,838,065	900,000	9	938,065	1,350,000	310,204
1909 ...	1,510,696	800,000	8	710,696	449,802	722,139
1908 ...	1,627,333	800,000	8	827,333	1,342,000	161,245
1907 ...	1,752,350	800,000	8	952,350	380,000	675,912
1906 ...	1,741,125	800,000	8	941,125	896,435	103,562
1905 ...	1,376,168	666,784	7	709,384	1,244,234	58,872
1904 ...	1,124,974	609,000	7	515,974	652,806	28,728

To the paid-up capital at the end of the year the profits showed a proportion of 17.7 per cent., to capital and reserve combined 9.9 per cent., and to the total working resources 1.1 per cent.

At the annual meeting in November the President, Sir Edmund Walker, detailed the arrangements proposed by the Minister of Finance, approved by the Government, for meeting the exceptional situation brought about by the outbreak of war. They were as follows:—

(1) For the first time in the history of Canada banks were empowered to pay their debts in their own notes. When these notes reached the Clearing-house however, they were redeemed by the Government legal tenders or in gold. The notes were not, as many people suppose, made a legal tender as between individuals, and the main object of this arrangement was to prevent people from securing actual gold coin in order to hoard it, a process which would have been ruinous to the nation as a whole, although comforting to the individual who secured the gold.

(2) The banks would have been able under the Bank Act to issue the emergency circulation for crop moving in September, and this date was set back to August.

(3) The Government raised somewhat the limit for that part of its legal-tender issues which is not entirely based on gold.

(4) The Government undertook to make loans to banks on approved security, in order to aid them in carrying on the business of the country.

Sir Edmund Walker added: "At that moment no machinery existed by which Canadian banks with call loans or actual cash, in either London or New York, could use such resources to pay debts in Canada. It seemed at first as if it would be necessary to declare several Bank Holidays in succession to afford time in which to work out remedial measures, but the latter were provided so promptly by the Government that no general cessation of business took place. The value of such measures is not to be judged by the use made of them. On the contrary, we are proud that they were used so little. Their real value consists in the assurance to the public and to the banks that steps have been taken, so far as lies in the power of the Government, to enable business to go on as usual. Since the passage of these measures the effect of the really wonderful provisions for financial relief set in force by the Imperial Government, the consequent ending of the British Moratorium, the recovery of the British and the partial recovery of other international Exchange markets, the removal of nearly all the enemies of the peace on the high seas, and the lowering, therefore, of the charge for the war risk in insurance, the partial resumption of operations by Stock and Merchandise exchanges, and many other remedial features—all these have helped largely to restore the broken machinery of the world by which before the War all international and much of our domestic business transactions were carried on."

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

Head Office: 38 Bishopsgate, London, E.C.

Capital—

Authorised	£1,200,000
Subscribed, 60,000 Shares, £20 per Share...	1,200,000
Paid up, £20 per Share	1,200,000

Price of Share, £52½. *Dividend*, 14%. *Yield*, £5 7*s.* 3*d.* %.

As the name implies, this Bank was founded by Royal charter, the date of incorporation being 1853. It is interesting to note that of the many chartered banks conducting business at the time of the formation of this institution there are now only four others remaining, the four being the Bank of Australasia, the Bank of British North America, the Colonial Bank, and the British Linen Bank. The charter has been renewed on various occasions, the last date being in 1909, when it was renewed for 30 years. The prospectus of the Bank pointed out that it was "established chiefly in order to extend the legitimate facilities of banking to the fast and rapidly expanding trade between the Australian colonies, British East India, China, and other parts of the Eastern archipelago—a field at present wholly unoccupied by any similar institution. The objects of the Company will, however, also embrace in connection therewith the extension of banking accommodation to the direct trade of British India, China, and Australia with this country, at present so inadequately provided for." In all respects but one these objects have been carried out, the one exception being that the Bank has not so far opened any office in Australia, though, indeed, the question has been mooted on more occasions than one. Not only have the objects laid down in the prospectus been carried out, but the Bank has extended its influence to a much greater extent, and offices have been opened in other parts of the world beyond those at first intended, and, in addition to India and China, business is carried on in the Straits Settlements, Siam, the Dutch East Indies, Japan, and the United States of America. The Bank did not actually start business until 1857, three offices being then open—viz., Bombay, Calcutta, and Shanghai. In 1858 business was started in Singapore and Hong Kong. Other important branches are those at Rangoon opened in 1862, Batavia in 1863, Manila in 1872, Penang in 1875, Yokohama in 1880, and Bangkok in 1893. At the present time, in addition to the head office in London, the business of the

Bank is carried on in the following places:—Amritsar, Bangkok, Batavia, Bombay, Calcutta, Canton, Cebu, Colombo, Delhi, Foochow, Haiphong, Hankow, Hong Kong, Iloilo, Ipoh, Karachi, Klang, Kobe, Kuala Lumpur, Madras, Malacca, Manila, Medan, New York, Penang, Puket, Rangoon, Saigon, Seremban, Shanghai, Singapore, Sourabaya, Taiping, Tientsin, and Yokohama.

For some years after its formation the Bank enjoyed a period of substantial prosperity, but during the later sixties there was experienced a time of severe depression, which naturally was reflected in the accounts of the banks, and, in so far as the Chartered Bank was concerned, by 1870, with a paid-up capital of £800,000, the whole of the reserve, amounting to £105,000, was swept away, and for a brief time the Bank was compelled to suspend the payment of dividends. In two years' time, however, it had sufficiently recovered from the depression to enable it to resume dividend payments, and from that time the growth of the institution

PAID-UP CAPITAL, $5,000,000.

REST AND UNDIVIDED PROFITS, $3,600,000.

TOTAL ASSETS, OVER $80,000,000.

The BANK, having over **300** Branches in Canada from Atlantic to Pacific, and AGENTS IN ALL THE PRINCIPAL CITIES IN AMERICA, has exceptional facilities for transacting a GENERAL BANKING and EXCHANGE BUSINESS with CANADA AND THE UNITED STATES. Collections and Correspondence invited.

DEPOSITS RECEIVED for fixed periods at favourable Rates, which may be ascertained on application to:—

LONDON OFFICES { 6 Princes Street, E.C., and 26 Haymarket, S.W.

London Committee: J. LEIGH WOOD, Esq., C.M.G.; Hon. SIDNEY PEEL; F. W. ASHE, Esq.

has been rapid. This may be gauged from the fact that by 1880—that is, within the short period of eight years from the time of resuming dividend payments—a reserve fund had once more been built up amounting to the substantial figure of £190,000. The deposits reached a total of £3,938,186. The paid-up capital, which had been raised to £800,000 in 1864, remained at this figure until 1907, when the steady and continued expansion called for an increase in capital. Accordingly, the paid-up amount was raised to £1,200,000, consisting of 60,000 shares of £20 each, fully paid.

At December 31 last the reserve fund reached a total of £1,800,000, or 50 per cent. more than the paid-up capital. Moreover, with one exception, the whole of this fund has been built up from profits. The increase of capital in 1907 was made at such a figure as to permit of a premium of £400,000 being secured, and this was added to the reserve fund. Further evidence of the great growth of the institution is to be found in the deposits. In 1860 they amounted to £1,600,000; by 1880 they touched nearly £4,000,000, and in a further 20 years they amounted to £9,200,000. It was in 1903 that they first exceeded £10,000,000. By 1910 an increase of 50 per cent. in this amount had occurred, while by December 31, 1912, they further rose to £18,477,016. A slight recession occurred in 1913, but at December 31 last they rose once more, reaching a total of no less than £19,146,663. On the other hand, the bills payable and loans last year fell from £3,951,316 to £2,007,515.

On the other side of the accounts, a very large increase took place in the cash, which rose from £3,968,117 to £5,903,942. Similarly, the investments rose from £2,694,864 to £4,242,806. Loans and bills discounted, however, fell from £11,696,222 to £8,636,671. The progress made by the Bank may be seen from the summary herewith of the liabilities and assets for various years since 1860.

The gross profits for 1914 amounted to £724,577, as compared with £690,349. This was accompanied by a rise in the expenses from £363,665 to £376,496, so that the net profit amounted to £348,081, as compared with £326,684, and it was deemed desirable not to repeat the bonus of 3 per cent. paid for 1913, the distribution thus being 14 per cent., as against 17 per cent. The directors decided that £150,000 should be set aside for special purposes, inasmuch as there are certain contingencies the result of which cannot be ascertained until the end of the War, these being eventualities arising from the negotiation of documents relating to Continental trade, &c.

Herewith we set out the profit record since 1904:—

Profits of the Chartered Bank of India.

* Includes bonus of 3%. † Includes bonus of 2½%.

The proportion that the shown net profit for 1914 bears to the paid-up capital is 29.0 per cent., to capital and reserve combined 11.6 per cent., and to the total working resources of the Bank 1.3 per cent.

Speaking at the meeting in April last Sir Montagu Cornish Turner, the Chairman, said: "As regards the future it would be folly on my part to prophesy what may happen in the next few months, or how the events of the future may affect the prosperity of this Bank. All I need say is this: that we know the rice crop in Burma is good, that the wheat crop in India is excellent, that the tea industry in India and Ceylon is most prosperous, that the jute mills in Bengal are likely to show good results in the present year, and that the rubber industry is in quite a healthy condition. So far all is to the good; but against this there is the set-back that we know of in the great scarcity of tonnage and the difficulty of the carriage of goods from the East to the West; this is common to all ports in the East and, I think we may say, to all ports in the West. When and to what extent this scarcity of tonnage will be removed it is impossible to foresee. No one can say what may happen until the War comes to an end."

CITY BANK OF SYDNEY.

Head Office: Pitt Street, Sydney.

Capital—

Authorised	£1,500,000
Subscribed, 50,000 Shares of £10 each ...	500,000
Paid up, £8 per Share	400,000

Price of Share, £6. *Dividend*, 5 %. *Yield*, £6 13*s.* 4*d.* %

The City Bank of Sydney was established in 1863, and incorporated by a special Act in 1864. The paid-up capital at June 30, 1864, was £196,457; by 1870 it had increased to £265,965, by 1895 it had risen to £400,000, at which figure it has since remained. By 1902 a reserve fund of £100,244 had been accumulated, but in 1903 the directors decided to transfer £109,000 from the reserve fund to the credit of contingency account, a step considered necessary in order to enable the board to make provision for the old accounts in liquidation. With the decks thus cleared a beginning was made with the formation of a new reserve fund, and this has been steadily increased year by year, until on June 30 last it amounted to £36,000. At one time the Bank had a considerable amount of notes in circulation, the amount in 1910, for example, being £102,346, but with the establishment of the Commonwealth Bank the notes have been called in, and at June 30 last the amount outstanding was only £6,244. Between 1895 and 1909 the deposits only rose from £1,075,000 to £1,270,000, but at June 30, 1910, they amounted to £1,390,146. Since then very rapid progress has been made. At June 30, 1911, the deposits were £1,637,602. Twelve months later they amounted to £1,890,899, and at June 30 last they reached a total of £2,140,434.

The cash in hand on June 30 last amounted to £678,288, as compared with £551,517 twelve months previously, the proportion to the total assets thus rising from 21.3 per cent. to 26.2 per cent. On the other hand, bills discounted, &c., fell from £1,685,452 to £1,630,650. Herewith we set out a summary of the liabilities and assets for various years since the formation of the Bank.

From 1906 to 1914 a very steady growth in profits was shown by the Bank. During this period the dividends steadily rose from 2½ per cent. to 6 per cent. For the twelve months to June 30, 1915, a slight recession occurred, and the dividend was reduced to 5 per cent.

The profit record since 1904 is as follows:—

Profits of the City Bank of Sydney.

Year ended June 30	Net Profit.	Dividend. Amount.	Rate.	Reserve, Deprn., &c.	Carried Forward.
	£	£	%	£	£
1915	25,105	20,000	5	5,000	2,553
1914	30,745	24,000	6	7,000	2,448
1913	30,706	20,000	5	10,500	2,703
1912	24,161	19,000	4¾	5,000	2,497
1911	20,177	16,000	4	4,000	2,336
1910	16,151	13,000	3¼	3,000	2,159
1909	14,085	12,000	3	2,000	2,008
1908	14,303	12,000	3	2,000	1,923
1907	13,115	11,000	2¾	2,000	1,630
1906	12,134	10,000	2½	2,000	1,505
1905	12,218	10,000	2½	2,000	1,371
1904	18,097	16,000	4	2,000	1,153

The proportion that the shown net profit for the past year bears to the paid-up capital is 6.3 per cent., to capital and reserve combined 5.8. per cent., and to the working resources the proportion is 0.9 per cent.

Price of Share, £4⅜. *Dividend*, 6 %. *Yield*, £8 11*s.* 5*d.*%

The Colonial Bank is one of the few remaining chartered institutions. It was incorporated by Royal charter on June 1, 1836; it has a note issue confined to the West Indian colonies. The authorised amount was increased by an Act of 1900 from £500,000 to £600,000. The head office of the Bank is in London and there is a New York agency. The remaining offices are 19 in number, including agencies, and are situated in Antigua, Barbados, Berbice, Demerara, Dominica, Grenada, Grenville, Kingston, Port Antonio, Falmouth, Montego Bay, Port Maria, Savanna-la-Mar, St. Kitts, St. Lucia, St. Thomas, St. Vincent, Port of Spain, and San Fernando. The subscribed capital is £2,000,000, and consists of 100,000 shares of £20 each. A sum of £6 has been paid up per share, making the paid-up capital £600,000. Neither capital nor reserve has been altered since 1890.

The accounts of the Bank have remained remarkably steady, the totals showing comparatively few changes during recent years. The deposits usually amount to a sum of about £2,000,000. The amount of cash naturally varies to a somewhat greater extent, but the discount and advances also show comparatively small fluctuations. Since 1910 the amount of the investments has shown some reduction, largely owing to the provision that has been made for the fall in the prices of securities.

From the statement of the liabilities and assets for various years from 1860 given herewith it will be noted that the progress of the Bank was rapid in the days when the cane-sugar industry was highly profitable, but that since beet sugar has competed so fiercely with cane the progress of the institution has been very slow. Indeed, its deposits in 1914 were much smaller than they were in 1880. The

increased prosperity of the West Indies in recent years has brought substantial recovery in deposits and in business.

During the past 10 years the fluctuation in income has not been of a very large amount, the figures varying between a minimum of £106,827 and a maximum of £120,907, while after deduction of expenses the net profit has been as low as £41,121 and as high as £55,293. For 1913 the gross profit amounted to £120,500 and the net profit to £54,647.

For 1914 the gross profits amounted to £119,465, as compared with £120,500. On the other hand, the expenses rose from £65,853 to £67,257, so that the net profit amounted to £52,208, as compared with £54,647. The dividend was maintained at 6 per cent., which absorbed £36,000.

Profits of the Colonial Bank.

Year ended Dec. 31	Gross Profit. £	Salaries and other Expenses. £	Net Profit. £	Dividend. Amt. £	Dividend. Rate. %	Reserve, &c. £	Carried Forward. £

1906 ...	114,262	67,487	46,775	39,000	6½	—	30,614
1905 ...	108,597	66,527	42,070	42,000	7	—	22,839
1904 ...	113,005	65,610	47,395	42,000	7	—	22,769

The proportion that the shown net profits bear to the paid-up capital is 8.7 per cent., to capital and reserve combined 7.0 per cent., and to the total working resources 1.5 per cent.

At the meeting in April last the Chairman said: "As to the future, it is quite impossible to prophesy, but the prices of sugar and also of cocoa are extremely good at present. I cannot say what may arise, but one has just reason for hoping that at all events the coming year may be good for the West Indies. You will have seen in the papers that we have made application to the Canadian Government to promote a bank in Canada. Every year the volume of business of the West Indies with Canada more and more tends to increase, and we have for some years wished to establish a branch there. In making application to the Government we were met in so favourable a manner that your directors thought it was desirable to take action at once, and though we are unable to act without authority from the British Government, we felt our hands would be strengthened in our application for such authority if we showed how readily the proposal to open a bank has been received in Canada."

The changes in the figures of the balance sheet at June 30 last are comparatively small as compared with those twelve months previously. The note circulation at £429,638 is £15,413 higher, but deposits have fallen from £2,276,515 to £2,203,247, while bills payable have dropped from £518,303 to £475,389. On the other side of the accounts cash has fallen from £676,805 to £626,142, while bills discounted and advances have dropped from £1,233,785 to £1,190,765. On the other hand, investments have gone up from £1,098,554 to £1,114,689. From the profits of the half-year to June 30 a sum of £18,000 was set aside as further provision for depreciation of investments, so that the value of the investments held by the Bank is in excess of the market prices as on June 30.

COLONIAL BANK OF AUSTRALASIA, LIMITED.

Head Office: Melbourne.
London Office: 33 Bishopsgate, E.C.

Capital —

Authorised £737,931 10 0

Paid up { 31,184 Pref., £9¾, fully paid / 77,278 *Ordinary*, £4½, £1¼ paid } 439,280 10 0

Price of Preference, £11⅜. *Dividend*, 7%. *Yield*, £6 1*s.* 9*d.*%
,, *Ordinary*, £1¾. *Dividend*, 7%. ,, £7 2*s.* 6*d.*%

This Bank was originally established in 1856 but was reorganised in 1893. It has an authorised capital of £737,931 10*s.*, the amount paid up being £439,280 10*s.* The paid-up capital consists of 31,184 Preference shares, of which £9 15*s.* per share is paid up, these shares being fully paid, and 77,278 Ordinary shares of £4 5*s.* each, of which £1 15*s.* per share has been paid up. There is a further liability of £2 10*s.* callable per Ordinary share and £4 5*s.* reserve per Ordinary share, also £9 15*s.* per Preference share. The Preference shares are entitled to a non-cumulative dividend of 5 per cent., and after payment of 5 per cent. on the Ordinary to rank equally with the latter in any dividend declaration. They are also entitled to priority for capital, with further participation after repaying the Ordinary shares, but when they shall have received 14 half-yearly dividends at the rate of 7 per cent. per annum their preferential rights shall cease.

With an allocation of £10,000 from the profits of the six months to March 31 last, the reserve fund was brought up to £240,000. At March 31, 1915, the deposits amounted to £4,184,295, as compared

with £4,033,238. The acceptances also rose from £207,690 to £259,018, but the bills in circulation fell from £386,067 to £209,023. On the other side of the accounts the main change is in the holding of cash which rose from £775,863 to £1,057,364, but whereas in March 1914 the bank had money at call in London amounting to £365,000, this item had disappeared at March 31 last. Herewith we set out the liabilities and assets for various years from 1896.

Steady growth is shown in the profits during recent years. For the twelve months to March 31, 1905, the gross profit was £89,941, and the net profit £37,609. For the twelve months to March 31, 1915, the gross profit was £134,857, and the net profit £56,542. Since 1910 the dividend has been maintained on both the Preference and Ordinary capital at 7%, while substantial sums have been set aside for reserve, &c., as may be seen from the following statement of the profits since 1905:—

Profits of the Colonial Bank of Australasia, Limited.

Year ended Mar. 31	Gross Profit. £	Salaries and Other Expenses. £	Net Profit. £	Total Dividend. Amt. £	Pref. %	Ord. %	Reserve, &c. £	Carried Forward. £

THIS Bank was founded in March 1866, with its head office in Melbourne. It had a capital of £500,000, in 50,000 shares of £10 each, and power was taken to increase to £1,000,000. The prospectus pointed out that it was formed "substantially for the purpose of affording banking and monetary accommodation to large and important classes of the community whose claims for assistance and whose business position entitled them to a much larger share of credit than has hitherto been afforded by the existing banking institutions. To these classes, viz., the manufacturers, small traders, farmers, vignerons, and other producers it will be principally the aim of this institution to afford timely and suitable accommodation." In 1890 the paid-up capital was £1,200,000, while there was a reserve fund of £1,000,000 and the deposits were £10,560,877. Subsequently there

• June 30.

was the crisis, suspension, and reconstruction, which occurred in April 1893. Under the reconstruction scheme the capital was fixed at £4,800,000, but it was reduced in August 1902 to £3,150,000 by writing off £5 10s. per Ordinary share, reducing the nominal and paid-up amount of such shares to 10*s*. This reduction provided £1,039,726, which was partly applied in writing off the Bank's interest in the Special Assets Trust Company, Limited, the balance being placed to a suspense account pending the amount of the Bank's liability under its guarantee being finally determined. Until the deposit receipts are repaid one-third of the surplus profits, after paying the Preference dividend, will be placed to a special reserve fund or applied to the reinstatement of the capital, and no dividend in excess of 4 per cent. will be paid on the Ordinary shares. At December 31 last the contingent liability in connection with the guarantee for the payment of the deposits of the Special Assets Trust Company, Limited, amounted to £40,803, and there were contingent assets, consisting of the remaining assets of the old Bank, the value of which is estimated to be about £21,500. The paid-up capital is shown as £2,213,009, less an estimated deficiency in connection with the Special Assets Trust Company of £760,663, leaving the net actual capital £1,452,346. As stated above, the Assets Trust's deposits are now reduced to £40,803, and it is the intention of the directors to continue the systematic redemption of these receipts in order that the whole amount may be extinguished before their maturity.

In consequence of the establishment of a Federal note issue the Bank's circulation, which amounted to £257,135 in 1910, had dropped to £11,913 at the end of 1913. But in consequence of the exceptional events during the latter half of 1914 the note circulation rose at the end of the year to £34,794. Similarly the bills in circulation rose from £367,611 to £539,736. The deposits were comparatively stationary, amounting to £6,653,773, as compared with £6,668,533. On the other side of the accounts the cash rose from £1,626,793 to £1,901,216, but the call money fell from £1,025,000 to £409,000. Investments, however, rose from £41,922 to £77,723. Bills discounted and other advances rose from £4,973,775 to £5,211,954. Herewith we show the liabilities and assets of the Bank for various years since 1867.

In spite of the dislocation of business arising from the War, the gross profits for 1914 were rather larger than those for the previous year, amounting to £313,076, as compared with £312,186. A substantial rise, however, occurred in the expenses, which rose from £177,335 to £183,422, so that the net profit fell from £134,851 to £129,654. Nevertheless the dividend on the Preference shares was increased from 3 per cent. to 4 per cent., while a sum of £20,000 was appropriated to reinstatement of capital, and £5,000 was allocated for reduction of Bank premises.

The proportion that the shown net profit for 1914 bears to the paid-up capital is 8.9 per cent., and to the total working resources 1.4 per cent. The profit statement since 1904 is as follows:—

THE Commercial Bank of London, Limited, was formed in May 1906 under the title of the Anglo-Japanese Bank, Limited, with head offices in London, to carry on all descriptions of banking business in Japan, its dependencies, Korea and the Far East, and elsewhere. The prospectus pointed out that Japan possesses about a dozen native banks of importance, which are mainly associated with the internal trade, "but do not provide the prompt and extensive banking facilities so essential between commercial houses and the East and West, and required by the present speedy development of the country. The expediency of establishing an Anglo-Japanese bank has, consequently, so strongly appealed to the business community of Japan that some of its leading bankers and merchants have

* First statement of accounts of this Bank in its new form. † December 31. ‡ Including Consols at cost, £65,625.

intimated through Messrs. Okura and Company their intention to acquire £100,000 of the Company's capital." A local board was appointed in Japan, and an office has been opened in Tokio. A certain amount of progress has been made, but it should be recognised that any rapid growth has been a matter of impossibility considering the depression that has characterised Japan during the past few years, in which the burdens of the debt incurred during the war with Russia and of the continued heavy expenditures on the army and navy have pressed heavily on the country.

Some two years ago the trust companies associated with Lord St. Davids took a substantial interest in the Bank, and consequently a much more energetic policy has since been carried out, and apparently it is now the policy of the board to gradually retire from Japan and use funds more largely in ordinary banking business in this country. One effect of this new policy was the decision to change the name, and though in future the wider policy adopted will absorb the chief attention of the institution, all the Japanese business hitherto transacted will be continued, and the encashment of Japanese coupons and the purchase and sale of Japanese Government Internal bonds will still remain a special feature of the Bank's business.

In February 1914 a scheme was carried for extinguishing the liability and cancelling the lost capital. It was decided (1) to form a new Company with the same name, having a nominal capital of £300,000.

divided into 100,000 shares of £3 each; and (2) that the undertaking and assets of the existing Company should be made over to the new Company. Every shareholder received one share of £3 in the new Company credited as fully paid in respect of every £10 share on which £5 was paid up in the old Company. The new Company undertook the duties and liabilities of the existing Company and also the cost of winding up. Consequently, the issued capital of the new Company amounts to £180,000, leaving £120,000 to be held in reserve for future use. It will be seen that by reducing the paid-up capital from £300,000 to £180,000 there was available a sum of £120,000 for dealing with the preliminary expenses and the lost capital. As the preliminary expenses were £40,000, there was a sum of £80,000 available for providing against the lost capital, which doubtless consisted of the depreciation that has occurred in the amount of the investments.

It was hoped that the reorganisation would be accompanied by a fair measure of good fortune, and in the first four months of the new career the Bank found business proceeding satisfactorily, but the suddenness of the outbreak of war rendered it necessary to realise certain investments at a loss, while it had outstanding loans for £508,000, and at a realised loss of less than £10,000 this item was reduced to £337,000 at March 31 last. Since then the figure has been still further reduced, amounting to £240,000 in May last. Apart from the specific losses the continuance of the War has affected the business in all its departments, and it is not surprising that the gross profit for the twelve months to March 31, 1915, was only £8,007, as compared with £20,587 for the previous year. Naturally no dividend was forthcoming. The profit record since 1906 is as follows:—

Profits of the Commercial Bank of London (Anglo-Japanese Bank), Limited.

The Bank was formed in 1904 under the title of the Cortes Commercial and Banking Company, Limited, to amalgamate the business of the London Bank of Central America, Limited (established 1893), with that of Enrique Cortes and Company, Limited (established 1881). In 1911 the present name was adopted.

The Bank operates chiefly in the Spanish Republics of Central America and the four northern republics of South America. In these countries banking is more closely connected with the commercial side of business than is the case in Europe, or even in the three large republics of South America. There is, in these countries, a scarcity of circulating medium, and the deposit and exchange business is naturally very limited. In the absence, therefore, of such facilities, the basis on which the business of a bank could be carried on successfully would be the produce of the country and the estates on which such produce is raised. The Bank must, consequently, be in a position to deal with the produce received as collateral, or cover, find the best markets for same, and, furthermore, be the intermediary between its local clients and the European manufacturers from whom they purchase their necessities in the way of manufactured goods, comestibles, &c.

The Commercial Bank of Spanish America, Limited, is adequately organised for this purpose, and has so far, with the limited means at its disposal, successfully carried on and developed such a business, especially financing coffee crops in Central America and Colombia, and rubber trade in the Amazon Valley, advancing against, shipping and selling in the European and North American markets the above-named products, as well as cocoa, sugar, hides, indigo, ivory, nuts, minerals, timber, &c., and carrying out the finance of, and attending to the transport and delivery of manufactured goods and all other articles imported into these countries, combined with an exchange and collection and general banking business.

In order to carry on such business safely it became essential to conduct it through the medium

of branches, and the Bank has now established such branches in Managua, Nicaragua; Bogota and Medellin, Colombia; Iquitos, Peru; Guayaquil, Ecuador; Caracas, Venezuela; and San Salvador, Salvador.

Further, in 1912 a branch was established in New York, and in 1913 one was opened in Manchester, whilst the agency in Paris has been transferred to the Banque pour le Commerce Extérieur, which institution was established a few months ago by the Commercial Bank of Spanish America exclusively for this purpose.

It being evident that the Bank's capital would prove insufficient for such increased business, at a shareholders' meeting held in March 1913 it was decided to increase the capital, bringing the amount authorised to £500,000. In November 120,000 "A" shares were offered for subscription at par, thus bringing the paid-up capital to a total of £261,417.

The "A" shares are entitled to a non-cumulative preferential dividend of 6 per cent. and to participate *pari passu* with the "B" shares in the profits remaining after paying 3 per cent. on the latter; they are also entitled to priority for capital with further participation after paying the "B" shares. Holders of "B" shares are entitled on paying 10*s.* per share to have such shares converted into "A" shares, the 10*s.* per share going to reduce the goodwill account, which has been thus brought down from £50,677 to £26,057. Since July 1, 1913, a further 1,059 "B" shares have been converted, leaving outstanding 1,438 shares. The progress made by the Bank may be seen from the following statement of liabilities and assets for each year since the commencement.

Naturally, the most recent accounts available which cover the twelve months to June 30, 1914, are unaffected by war conditions, and the Bank is able to show a gross profit of £29,575, as compared with £27,515. But as the expenses have risen from £10,450 to £16,335, the net profit has fallen from £17,065 to £13,240, and in consequence of the outbreak of war the directors considered it more prudent to distribute a dividend of 3 per cent. only, instead of the customary 6 per cent., while the carry-forward was increased from £5,670 to £9,252. Herewith we set out the profit record since the formation of the Bank:

Profits of the Commercial Bank of Spanish America, Ltd.

Year ended June 30	Gross Profit (after deduction of Reserve for Doubtful Debts).	Expenses.	Net Profit.	Dividend Paid on— Amount.	"A" Shs.	"B" Shs.	Transferred to Reserve Fund.	Carried Forward.

for its shareholders. In addition to its head office at Hobart it has 15 branches. By 1890 the paid-up capital amounted to £125,000, while a reserve fund of £150,000 had been accumulated. Five years later the paid-up capital was £141,493, and the reserve was £190,000. But as a result of the financial troubles it was necessary to draw on the reserve, and by 1900, with no change occurring in the paid-up capital, the reserve fund was £100,000. The capital remained unaltered until 1906, when it was increased to £150,000, the reserve amounting to £132,500. In 1908 the capital was increased to £175,000, the reserve fund being the same. During 1913 the capital was again increased, it now standing at £200,000 and the reserve at £260,000. In 1890 the deposits were £1,722,078, but in 1895 they had fallen to £1,350,058.

Between 1895 and 1910 comparatively little growth was shown, but from 1910 to 1914 a steady and substantial advance occurred, the deposits rising from £1,525,920 to £1,919,117. A slight recession occurred in February 1915, when the amount was £1,910,862. On the other side of the accounts, the cash rose from £353,749 in February 1914 to £537,170 in February 1915. The advances, &c., however, fell from £1,740,319 to £1,555,642. Herewith we set out the liabilities and assets for various years since 1890.

For the twelve months to February 1915 the Bank showed a gross profit of £68,279, as compared with £68,423. After providing for expenses, &c., there was a net profit of £37,932. The dividend was maintained at 14 per cent., while £10,000 was carried to reserve. The profit record since 1905 is as follows:—

Profits of the Commercial Bank of Tasmania, Limited.

Year ended February	Gross Profit. £	Expenses. £	Taxes. £	Net Profit. £	Dividend. Amt. £	Rate. %	Reserve Invest., Deprn., &c. £	Carried Forward. £

* Including £8,507 premium on new shares.

The proportion that the shown net profit bears to the paid-up capital is 18.9 per cent., to the capital and reserve combined 8.3 per cent., and to the total working resources 1.6 per cent.

COMMERCIAL BANKING COMPANY OF SYDNEY, LIMITED.

Head Office: George Street, Sydney.
London Office: 18 Birchin Lane, E.C.

Capital—
Authorised £4,000,000
Subscribed, 160,000 Shares, £25 each ... 4,000,000
Paid up, £12 10*s.* per Share 2,000,000
Price of Share, £25. *Dividend*, 10%. *Yield*, £5 1*s.* 3*d.*%

With the exception of its London office the Commercial Banking Company of Sydney has confined its business entirely to New South Wales and Queensland, thereby differing to some extent from other financial institutions, which have spread themselves over the whole of the Commonwealth. The Company was started as a co-partnery in 1834, and it was not until 1848 that it was incorporated. The original capital was £300,000 in shares of £100. It was proposed to raise at first £30,000 by a payment of £10 per share. The first report issued, which covered the quarter to December 1834, showed that a paid-up capital of £30,467 had been secured, the note circulation amounted to £8,143, and the deposits were £22,630. Capital increases frequently occurred, and at the end of 1911 the amount paid up was £1,500,000, but owing to the expansion of the business the directors decided in February 1912 to further increase the capital to £1,750,000 by the creation of 20,000 new shares, which were issued to the shareholders at par, the allotment being in the proportion of one new share to each six shares held.

A further increase to £2,000,000 took place during the second half of 1913, and at December 31, 1914, the whole amount was paid up. The growth of the reserve fund has been very substantial. It was not until 1879 that the amount exceeded £500,000, but by 1893 it amounted to £1,000,000. From 1894 to 1902 it remained at £1,010,000, since which date it has steadily increased year by year, until at the end of 1914 it reached a total of £1,730,000.

From the profits of the six months to June 30 last a further £25,000 was added to the reserve, so that at the present time it stands at £1,755,000. The note issue, which at the end of 1910 stood at £631,538, has in consequence of the establishment of a Federal issue steadily dwindled away, and at the end of 1914 it amounted to £18,744 only. At June 30 last it had further fallen to £16,952. At the end of 1914 the deposits amounted to £22,228,133, while at June 30 last they reached a total of £25,071,778. The bills in circulation at the end of 1913 amounted to £1,522,363; at the end of 1914 they had dropped to £865,207. On the other side of the accounts, the cash in hand rose

from £5,579,225 to £5,844,195, while call money in London fell from £1,085,000 to £546,512. Investments, however, rose from £2,383,925 to £3,539,025; bills discounted also rose from £13,660,704 to £14,851,835; but bills receivable, &c., dropped from £3,241,150 to £1,679,735. We set out herewith a statement of the liabilities and assets of the Bank for various years from 1861.

At the time of the crisis in 1893 the Bank occupied a strong financial position, but in view of the Federal deposits and the number of stoppages the directors decided to protect their depositors by a reconstruction, under which the paid-up capital was increased to £400,000. It was not necessary to draw upon the reserve fund, and in spite of the temporary falling off in the amount of the deposits, as we have already indicated, the upward movement continued apace, and the temporary absence of progress was soon made good. As regards the shareholders, the Bank paid a dividend of 25 per cent. for each year from 1876 to 1892, but as a result of the troublous times profits fell from £168,000 for 1892 to £62,000 for 1893, and

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE LONDON JOINT STOCK BANK LIMITED.

We have audited the above Balance Sheet dated the 31st December, 1914, and the Profit and Loss Account for the year to that date.
The Accounts of the Head Office in Princes Street and of the Branches within the Metropolitan area and district have been examined by the undersigned William Plender and William Cash, and the Accounts of the Country Branches have been examined by the undersigned, William B. Peat.
We have obtained all the information and explanations we have required, and, in our opinion, such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us, and as shown by the Books of the Company at the Head Office, in which the Returns from the Branches have been incorporated.

WM. PLENDER (Deloitte, Plender, Griffiths & Co.),
WM. CASH (Cash, Stone & Co.),
W. B. PEAT (W. B. Peat & Co.).
} Auditors

London: 19th January, 1915.

the dividend was reduced to 5 per cent. This was followed by five payments of 8 per cent. per annum and one of 8½ per cent. For 1900 the rate was raised to 10 per cent., and it has been maintained at this figure for each year since.

A prosperous time was enjoyed during 1914, and the profit rose from £272,364 to £287,489. The 10 per cent. dividend called for £199,258, and of the balance £75,000 was carried to reserve, while the carry-forward was increased from £57,730 to £70,961.

The profit and dividend record since 1904 is shown herewith:—

Profits of the Commercial Bank of Sydney.

Year ended Dec. 31	Profit.	Dividend. Amount.		Balance.	Balance.	Carried Forward.
	£	£	%	£	£	£
1914 ...	287,489	199,258	10	88,231	75,000	70,961
1913 ...	272,364	174,883	10	97,481	100,000	57,730
1912 ...	255,994	161,302	10	94,692	80,000	60,249
1911 ...	237,991	150,000	10	87,991	80,000	45,557
1910 ...	234,956	150,000	10	84,956	80,000	37,566
1909 ...	220,933	149,776	10	71,157	80,000	32,610
1908 ...	182,679	130,604	10	52,075	40,000	41,452
1907 ...	154,805	111,288	10	43,517	40,000	29,377
1906 ...	134,004	100,000	10	34,004	30,000	25,860
1905 ...	130,467	100,000	10	30,467	30,000	21,856
1904 ...	131,125	100,000	10	31,125	30,000	21,389

The proportion that the shown net profit bears to the paid-up capital is 14.4 per cent., to the capital and reserve combined 7.7 per cent., and to the total working resources 1.1 per cent.

COMMONWEALTH BANK OF AUSTRALIA.

Head Office: Sydney, New South Wales.
London Office: 36-38 New Broad Street, E.C.

THE Commonwealth Bank of Australia was established in 1912 under a special Act of the Federal Parliament, and opened for general banking business both in Australia and London on January 20, 1913. It has thus been in operation for about two and a-half years, during which period it has made rapid progress for a new institution. As many of our readers are aware, the Bank is wholly owned and guaranteed by the Commonwealth of Australia, which is responsible for all its obligations. It possesses branches in the Metropolitan cities of all the Australian States, and also at Canberra, the Federal capital, and elsewhere, with agencies throughout the whole of Australia. At the end of 1913 the deposits were £2,378,522, while by the end of December 1914 they had risen to £4,970,881. By June 30 last they had risen to the large total of £8,547,526. Herewith we set out a summary of the liabilities and assets at the end of 1913, at the end of 1914, and as at June 30 last:—

	June 30, 1915. Amt.	Propn. of Total	Dec. 31, 1914. Amt.	Propn. of Total.	Dec. 31, 1913. Amt.	Propn. of Total.

The progress that has been made may be further gathered from the fact that the profits for the six months to June 30, 1915, are sufficient to wipe out the whole of the debit balance brought about by establishment costs in opening branches throughout Australia, and transfer a sum of £1,110 for starting a reserve fund and a similar sum for starting a redemption fund. The profit statement is as follows:—

	Half-Year to June 30, 1915.	Year ended Dec. 31, 1914.	Half-Year to Dec. 31, 1913.
